HESSE, Mary B. *Forces And Fields: The Concept Of Action At A Distance In The History Of Physics.* NY Philosophical Lib 1961.

HESSE, Mary B. *Models And Analogies In Science.* Notre Dame Notre Dame Univ Pr 1966.

The basic question posed by the author is whether or not models are logically essential to scientific theories. The first chapter presents in dialogue form the pros and cons of this thesis, and the remaining chapters are devoted to a discussion of analogical argument and the nature of models. The final answer given is that models are not in general logically essential, although if a theory is required to predict relations between new observation predicates, some appeal to models as empirical data is demanded.

HESSE, Mary B. *The Structure Of Scientific Inference.* Berkeley Univ Of Calif Pr 1974.

The author examines the theoretical and observational aspects of science and proposes a network model of theories. The network model is applied to the problem of universal terms. The grue paradox is also discussed. The book concludes with a discussion of Maxwell's use of analogy and an interpretation of the aims of science as a form of realism.

HICK, John (ed). *The Existence Of God.* NY Macmillan 1964.

HICK, John (ed). *Truth And Dialogue In World Religions: Conflicting Truth-claims.* Philadelphia Westminster Pr 1974.

HICK, John. *Evil And The God Of Love.* NY Harper & Row 1966.

One of the most thorough discussions of the problem of evil ever published. About three-quarters of the book is devoted to the history of theodicies; the remainder is concerned with the defense of Hick's own theodicy. The historical part is divided into "The Augustinian Type of Theodicy" and "The Irenaean Type of Theodicy." Included in the Augustinian section are discussions of Aquinas, Calvin, Leibniz, and Barth as well as an analysis of Augustine himself. Hick ends this section with a description of

what he believes are the basic shortcomings of the Augustinian position. The Irenaean position, instead of emphasizing the Fall as the Augustinian position does, finds the justification of evil in an infinite good which God is bringing out of the temporal process. Included in the Irenaean section are Schleiermacher, F R Tennant and Austin Farrer. Hick's own view he regards as a modification of the Irenaean position. He offers a lengthy defense of this "Theodicy for Today" in the face of criticisms advanced by analytic philosophers from Hume to the present day.

HICK, John. *Faith And Knowledge: A Modern Introduction To The Problem Of Religious Knowledge.* Ithaca NY Cornell Univ Pr 1957.

This is an inquiry "into the manner and structure of the religious person's supposed awareness of the divine." Part I states the problem of knowledge and belief in general; Part II describes three theories of faith; Part III expounds the author's philosophy of faith, its logic and freedom; Part IV is a rationale of the Christian faith.

HICK, John. *Philosophy Of Religion.* Englewood Cliffs NJ Prentice-Hall 1963.

Professor J Hick's monograph provides a cogent statement of a number of problems associated with the philosophy of religion. The author is conscious of the academic philosopher looking over his shoulder and he attempts to present religion in such a manner that it enters into the universe of discourse of philosophy. He is particularly sensitive to the contemporary discussions as to the nature of language and the problem of verification, especially as it relates to the claims of religion. Professor Hick concludes that there are no decisive proofs for the existence of God, but then there are no decisive proofs to disprove His existence.

HICK, John. God As Necessary Being. *J Phil* 57,725-733 O-N 60.

The author sets forth three arguments: (1) that two concepts of necessary being, logical and factual, are to be distinguished, (2) that a number of contemporary philosophers, such as J N Findlay, have assumed that the Christian concept of God requires the notion of logically necessary being, which notion they have properly criticized, but that Christian thinkers have employed a notion of God as factually necessary, and (3) that a philosophically unobjectionable concept of God as a factually necessary being can be developed.

HIGGINS, John W. Some Considerations Of Psychoanalytic Theory. *Proc Cath Phil Ass* 35,21-44 1961.

HIGGINS, Thomas J. *Ethical Theories In Conflict.* Milwaukee Bruce 1967.

Modern controversies flow from differing views of ethical good. To Naturalists = property like hardness. Intuitionists = undefinable. Deontologists = duty, not good, prime concept. Subjectivists = appeals to moral sense. Objectivists = product of cosmic process or evolution or will of God. Self Realization = what completes man. Emotivists = what I like. Metaethics = study of ethical language. Relativists = varies with time, place and person. Existentialists = agent creates moral values. This confusion resulted from abandonment of metaphysics which is required to answer ultimate questions about being. Human good found in will acts needed to attain man's end. Difference between moral good and evil depends on man's nature. Natural Law commands all necessary good, forbids all moral evil.

HIGGINS, Thomas J. *Man As Man: The Science And Art Of Ethics.* Milwaukee Bruce 1949.

General ethics is Part I of this book. End of man is beatitude to be attained by good will acts. Objective norm of goodness is total nature of man. Moral obligation arises from Natural Moral Law which is universal, unchangeable, knowable, supported by sanction which is attainment or loss of beatitude. Subjective norm of morals is Conscience. Virtue and Vice are subjective co-principles of morality. Part II is Individual Moral Principles concerning religion, self development, control of body, sex and drink, loving one's fellow, honoring rights, respecting property, keeping contracts, telling the truth. Part III is Social Ethics regarding marriage, family, State, powers of government, duties of citizens, relations of State to State.

HIGGINS, Thomas J. The Deadlock Among The Non-Scholastics Concerning The Definition Of The Good. *Proc Cath Phil Ass* 32,150-160 1958.

HIGH, Dallas M. Death: Its Conceptual Elusiveness. *Soundings* 55,438-458 Wint 72.

This essay discusses the philosophical foundations of attempts to "update" the definition of death. It draws a distinction between criteria of death determination and concept of death and argues that the prominent "brain death" designation cannot be accepted uncritically and without qualification. The essay argues that neither the structure of life and its corollary, destruction of life, can be reduced to physico-chemical laws and that, instead, a hierarchical structure of organisms should be accepted. Consequently, death is comprehensive in referent requiring comprehensive judgment in determination.

HILL, Brian Victor. *Education And The Endangered Individual; A Critique Of Ten Modern Thinkers.* NY 1973.

A paradox has arisen in the philosophy of education. On the one hand, it is agreed that individuality is to be fostered; indeed, the purpose of education, it is said, should be to develop every individual's potentialities. On the other hand, it is recognized that the scope of individuality, in the industrialized world, is being narrowed, and that the philosophy of education should take this narrowing into account. How the paradox is to be resolved, is the theme of this book. First, the dimensions of the problem are explored. Then, we are presented with the views on it developed by three Hegelians (Kierkegaard, Nietzsche, and Marx), two social scientists, two investigators of the bearing of scientific world-views on life in society (Dewey and Whitehead), and three religious thinkers. Finally, in a synthesis, the view is defended that, despite the inroads of society on individuality, "the sanctity of the individual" is still of sufficient importance in the modern world to warrant emphasis on it, and promotion of its high valuation, in the philosophy of education.

HILL, Charles Leander. *A Short History Of Modern Philosophy From The Renaissance To Hegel.* Boston Meador 1951.

HILL, James J. The Aesthetic Principles Of The *Peri Hupsous*. *J Hist Ideas* 27,265-274 Ap-Je 66.

This article is a discussion of the concept of sublimity in the *Peri Hupsous*. Previous theories about the meaning of this work are examined, and thought generally unsatisfactory. The author's interpretation is that longinus here is setting forth luminosity as an aesthetic ideal, in both literature and painting. Height and light, depth and darkness, combine to form an aesthetic model, an archetypal configuration. The sublime is associated with the most intense image this configuration can exhibit.

HILL, John G. Thirty Years Of College Religion. *Personalist* 22,16-27 Ja-Wint 41.

HILL, Johnson D and Stuermann, Walter E. *Philosophy And The American Heritage.* NY Philosophical Lib 1961.

Hill is chairman of the board of the Atlas Life Insurance Company; Stuermann is professor of philosophy at the University of Tulsa. Their book sets forth the principles which, in their opinion, constitute the American way of life; for example, in politics, suffrage as a basic human right and responsibility; in economics, opposition to "levying excessive taxes on those who have been financially successful;" in morals, respect for the personality of others and of oneself; in religion, faith in a divine order and opposition to naturalism; in education, recognition of superiority as contrasted with a "democratic" enhancement of mediocrity; in social organization, concern over the mechanization of life; and in national appraisal, an optimistic bias.

HILL, Margaret. The Case For Religious Maturity In America. *Personalist* 44,348-356 Sum-Jl 63.

HILL, Shirley and Suppes, Patrick. *First Course In Mathematical Logic.* NY Bloisdell 1964.

HILL, Thomas E. *Ethics In Theory And Practice.* NY Crowell 1956.

The first part of this book is an attempt to set forth the major varieties of ethical theories by way of sketches of the thought of their most articulate and persuasive exponents. The theories considered include emotive, approval, rationalistic, suitability, nature, evolutionary, self-realization, hedonistic and desire theories. The second part of the book sets forth a working theory based upon suggestions emerging from critical evaluation of the theories presented in the first part; and the third part consists of applications of the principles developed in the second part to problems of personal life and economic, political, and international relations.

HILL, Thomas E. "The Distintiveness Of The Concept Of Good" in *Value And Valuation, Axiological Studies In Honor Of Robert S Hartmann.* Knoxville 1972. The concept of good is said to be distinguishable from all descriptive concepts by its being normative in the sense of indicating how things should be or ought to be. But it is also distinguished from other normative concepts in that it is intended to mark out not so much a restraining character of the normative as an attractive or appealing one. It is possible to approximate the character of the concept of good by saying that what is good is worthy of or suitable for a favorable attitude. However, being worthy of or suitable for something already presupposes a concept of good that renders this account in part circular. Although the concept of good overlaps other concepts, it is not reducible to them, its unique import can be seen, as Julius Kovesi in his *Moral Notions* rightly insists, only by way of the special needs, and purposes of the circumstances in which it is used.

HILL, Thomas English. *Contemporary Ethical Theories.* NY Macmillan 1950.

This book attempts to classify, summarize, and evaluate the principal types and subtypes of ethical theories developed in the first half of the twentieth century. The presentation of each type is preceded by an historical introduction, filled in with expositions of the theories of principal representatives of each of the subtypes, and concluded with an attempt to point out the major strengths and weaknesses of the type under consideration. The principal types under which the theories are classified include skeptical, approbative, process, psychological, metaphysical and intuitional theories; and among the principal writers considered are A J Ayer, Bertrand Russell, Edward Westermarck, John Dewey, George Santayana, R B Perry, W M Urban, W D Ross, and G E Moore.

HILL, Thomas English. *Contemporary Theories Of Knowledge.* NY Ronald Pr 1961.

The major types and subtypes of theories of knowledge developed in the first half of the present century are classified, summarized and critically evaluated. The theories considered include idealism, new realism, and critical realism; constructionist, intuitional, and organicist theories; empirical and conceptual pragmatism; and phenomenalist, physicalistic, pythagmatic, and ordinary language analysis. Among the principal philosophers considered are Bradley, Blanshard, Perry, Russell, Santayana, Moore, Price, Whitehead, James, Dewey, Lewis, Carnap, Reichenback, Quine and Wittgenstein. The drift of the critical evaluations is in the direction of a qualified realism.

HILL, Thomas H. *The Concept Of Meaning.* NY Humanities Pr 1971.

This book attempts to sort out the principal factors that enter into meaning situations and to indicate how apparently conflicting theories of meaning have emerged by way of special emphases upon one or another of these factors. Among the principal factors considered are bearers of meanings, ways of meaning, contexts, stimuli of meaningful expressions, responses to such stimuli, objects referred to, modes of confirmation of meaningful expressions, and uses of such expressions. Among the principal philosophers whose views are discussed are Carnap, Russell, Ogden and Richards, Quine, Wittgenstein and Austin. Meanings themselves are represented as patterns of possible experience; but this representation is advocated as no more than a point of departure not incompatible with positive claims of some of the theories considered.

HILLENBRAND, Martin J. Dharma And Natural Law: A Comparative Study. *Mod Sch* 27,19-28 N 49.

HILLENBRAND, Martin Joseph. *Power And Morals.* NY Columbia Univ Pr 1949.

The author treats of three classical political problems: power, authority and liberty. He makes a plea for a *metaphysical basis of politics*. The most likely present solution to the problem of power, he concludes, is the tendency towards the control of power by morals and by such national and international authorities as are sanctioned by morals.

HILLIARD, Albert Leroy. *The Forms Of Value; The Extension Of A Hedonistic Axiology.* NY Columbia Univ Pr 1950.

The author presents a modified version of psychological hedonism as an hypothesis and from it attempts to answer such basic questions as: What, basically, is the nature of *value*? What is the fundamental significance of the type value judgment? How are judgments of value related to judgments of fact? What different forms does value take? After analyzing abstract aspects of value, the author considers typical exemplifications thereof in ethics, aesthetics, religion, etc. Such cardinal concepts as *ought, good and bad, justice, utility and value, love, truth*, are examined in their valuational aspects.

HILLMAN, Donald J. The Measurement Of Simplicity. *Phil Sci* 29,225-252 Jl 62.

HILLMAN, Donald J. The Probability Of Induction. *Phil Stud* 14,51-55 1963.

The article takes up Strawson's presentation of "the mathematical argument to justify induction." Specifically, the author examines Strawson's claim that "... it is a proposition of pure mathematics that, given any population, the proportion of possible samples, all of the same size, which match the population, increases with the size of the sample." The author gives an expanded form of Strawson's presentation which he holds brings out certain mathematical details which are suppressed in Strawson's treatment. He concludes that Strawson's account of the mathematical argument to justify induction gives a misleading impression of the probabilistic notions and procedures involved.

HINMAN, Frank. *The Impact Of The New Physics.* NY Philosophical Lib 1961.

Dr Hinman, a biologist, gives a summary statement of the wonders of nuclear physics and of astronomy, followed by an explanation of the evolution of life and of intelligence, based on the new physics. The final chapter surveys a range of psychological phenomena and points toward a possible spiritual awakening of man. A collateral reading list is given at the end of each chapter, and there is an index.

HINNANT, Charles H. Hobbes On Fancy And Judgment. *Criticism* 28,15-26 Wint 76.

Critics emphasize the unity of Hobbes's view of the poetic process, overlooking the fact that he uses the words "fancy" and "judgment" in two distinct ways in his writings. In his generalized analysis of mental activity in *The Elements of Law*, Hobbes regards the fancy as implicitly subordinated to judgment; but in *The Answer to Davenant's Preface*, the order of priority between the two terms is reversed, as Hobbes moves to a view which stresses the fancy's autonomy as a creative power.

- HINTIKKA, Jaakko.** *Cogito, Ergo Sum* As An Inference And A Performance. *Phil Rev* 72,487–496 O 63.
- Hintikka responds to criticisms of his article "*Cogito, Ergo Sum*: Inference or Performance," *Philosophical Review*, Volume 71, Pages 3–32 put forth by Carney and Weinberg. Against Carney, Hintikka insists that Descartes *did* base his inference *sum res cogitans* on the *cogito* insight, though he did not give a definitive justification until the Sixth Meditation. Against Weinberg, Hintikka says that he never denied that *cogito, ergo sum* was both a performance and an inference. He insists, however, that the certainty of the *sum* is not derived from the certainty of the *cogito* and the necessary connection between thinking and existence: to say "I exist" is logically self-verifying.
- HINTIKKA, Jaakko.** *Cogito, Ergo Sum*: Inference Or Performance? *Phil Rev* 71,3–32 Ja 62.
- Hintikka examines the relation of *cogito* to *sum* in Descartes' famous dictum. Though it can be seen as an inference, it is not a logical deduction. Descartes' insight was that it is existentially inconsistent for a person to deny that he exists, so it is existentially self-verifying to assert that he exists. There is thus a performatory dimension to *cogito, ergo sum*. The indubitability of the statement is not perceived by means of the thinking—it is indubitable because and insofar as it is actively thought of.
- HINTIKKA, Jaakko.** *Knowledge And Belief: An Introduction To The Logic Of The Two Notions*. Ithaca NY Cornell Univ Pr 1962.
- Ancient Greeks raised the issue whether it is the same to know and to hold a belief that is true. Puzzles arose about claims to know that one cannot know. Hintikka's book is a fairly complete survey of analytic answers to Moore's puzzle; when pragmatic, metaphysical and phenomenological writers consider problems linguistically, then they are relevant to the tasks of clarification. The great merit of the book is the contribution of a formal symbolism.
- HINTIKKA, Jaakko.** *The Intentions Of Intentionality And Other New Models For Modalities*. Boston Reidel 1975.
- HINTIKKA, Jaakko.** Are Logical Truths Analytic? *Phil Rev* 74,178–203 Ap 65.
- Various assertions have been made concerning analytic sentences, among them the following: (1) they do not convey any factual information (they are tautologous), and (2) they can be shown to be true by strictly analytic methods. Hintikka shows that more clarity is needed in talk of analyticity by showing that the truths of quantification theory are analytic in sense (1) but not analytic in sense (2).
- HINTIKKA, Jaakko.** Aristotelian Infinity. *Phil Rev* 75,197–218 Ap 66.
- The following main points are argued and discussed: (1) In his theory of infinity, Aristotle *did not* give up the principle that every genuine possibility is sometimes realized; for (2) his infinity exists in a special sense of existence, and in this sense it is actualizable. (3) Aristotle denied even the potential existence of arbitrarily large spatial magnitudes; (4) This led into difficulties in his philosophy of mathematics. (5) Aristotle *did not* give up the principle that conceivability implies realizability; he only denied its applicability to the special case of absolute spatial magnitudes. (6) The distinction between conceivability and realizability is different from Aristotle's distinction between absolute and relative possibility.
- HINTIKKA, Jaakko.** Aristotle And The "Master Argument" Of Diodorus. *Amer Phil Quart* 1,101–114 Ap 64.

- Suppose we want to change our quantification theory so as to admit empty singular terms. It is argued that the *only* way of doing so in accordance with our normal logical assumptions is to be identify "b exists" with "[Ex] (b = x)." This suggests the following consequences: (a) Existence cannot be an *unanalyzable* predicate; (b) Existence can be a *complex* predicate; (c) The prime vehicle of existential assertions is the existential quantifier; (d) To be is to be identical with one of the values of a bound variable, for this is what "[Ex] (b = x)" says of b; (e) We may make existential commitments in many ways, but all of them could be made equally well by means of the existential quantifier.
- HINTIKKA, Jaakko.** The Once And Future Sea Fight: Aristotle's Discussion Of Future Contingents In *De Interpretatione* ix. *Phil Rev* 73,461–492 O 64.
- Aristotle's main problem in *De Interpretatione* IX is not due to applications of *tertium non datur* to statements about the future but to his tendency to equate omnitemporal truth with necessary truth. A true prediction concerning a temporally specified future event has remained true for an infinity of past time; hence it seems necessarily true. Aristotle's attempted solution consists in shifting the emphasis from standing sentences to sentences token-reflexive in that they contain explicitly or implicitly the word "now," which Aristotle habitually thought in terms of anyway. Whatever happens, happens necessarily when it happens in that nothing else could have happened at that moment. There usually is no temporally unqualified necessity, however, for at other times it will be true to say that something else happens instead. This interpretation is defended by analyzing the structure of Aristotle's argument.

- HIPPLE, John.** *The Beautiful, The Sublime, And The Picturesque In Eighteenth-Century British Aesthetic Theory*. Carbondale S Illinois Univ Pr 1957.
- This book treats the aesthetic systems of the following: Joseph Addison, Francis Hutcheson, David Hume, William Hogarth, Alexander Gerard, Edmund Burke, Lord Kames, Sir Joshua Reynolds, Thomas Reid, Archibald Alison, William Gilpin, Sir Uvedale Price, Humphry Repton, Richard P Knight, Dugald Stewart. Professor Hipple ventures the cautious generalization that the British aestheticians of the eighteenth century are concerned primarily with the response of the mind to the aesthetic objects and with the faculty of taste. Their analyses are genetic and empirical; their psychology associationist.
- HIRSCH JR, Eric Donald.** *Validity In Interpretation*. New Haven Yale Univ Pr 1967.
- HIRSCH JR, Eric Donald.** *Wordsworth And Schelling: A Typological Study Of Romanticism*. New Haven Yale Univ Pr 1960.
- While a knowledge of Wordsworth's philosophical outlook would be quite helpful in understanding his poetry, it has proved difficult to re-construct this outlook from the fragmentary hints given in the poetry itself. Hirsch has found an adequate substitute in Schelling's early philosophy, notwithstanding the fact that neither was influenced by the other. The justification for linking Wordsworth with Schelling must be sought in the unity and inner coherence of the romantic perspective itself. Ignoring the vicissitudes in its development as extraneous to his purpose, Hirsch presents a clear and vigorous outline accurately portraying the basic features of Schelling's philosophy up to 1806.
- HIRSCH JR, Eric D.** Truth And Method In Interpretation. *Rev Metaph* 18,488–507 Mr 65.
- HIRSCHFELD, Gerhard.** *An Essay On Mankind*. NY Philosophical Lib 1957.
- The problem of this essay is to define "mankind as a whole" and to survey its past in order to stimulate thinking on its future. The predicament of mankind is said to be its fragmentation into opposing groups. A new yardstick is needed to measure the interests of the whole human race. The author proposes several principles to guide such measurement of mankind's interests: the sanctity of human life, opposition to nonhuman forms of life, and the priority of mankind's interests to all lesser interests. There are numerous quotations from those writers whom the author believes to be promoting a unitary conception of mankind.
- HIRST, R J.** *The Problems Of Perception*. NY Macmillan 1959.
- This book criticizes in detail both the view that sense-data are actual existents which constitute the only direct objects of perception and the view that the sense-data theory and the direct theory simply give us alternative languages for describing the same facts. The criticisms of the latter, now very popular, view are among the first published. The phenomenalist theory of physical objects is also criticized both in its factual and in its linguistic form, and the modified representative theory of modern

neurologists. In his own account of perception at the end the author adopts a non-representative theory in a form which allows for error and does not claim direct confrontation with external objects. He thinks that an adequate account of perception requires a double aspect theory of body and mind, which he defends against objections.

HIZ, H. A Warning About Translating Axioms. *Amer Math Monthly* 65,613-614 1958. The sentential calculus of *Principia Mathematica* of Whitehead and Russell was axiomatized using negation and alternation as primitive terms. Although conjunction is definable by means of these primitives and these primitives by means of conjunction and negation, if one translates mechanically the axioms of PM into conjunction and negation, one does not obtain a complete axiomatization of the sentential calculus.

HIZ, Henry. Kotarbinski's Praxeology. *Phil Phenomenal Res* 15,238-243 D 54. Kotarbinski developed a general theory of action. It abstracts from moral, esthetic and other qualities of action and studies only the efficacy. He provides an analysis of what it means to do something, to be an agent, a perpetrator. It means that his voluntary act is a necessary condition for something to occur. An analysis of negligence, refraining from doing something, collective action and a variety of the methods of efficacy is given.

HIZ, Henry. Modalities And Extended Systems. *J Phil* 58,723-730 N 61. Modal terms are interpreted meta-linguistically; necessity as consequence, possibility as consistency with a system. But often systems are not complete—not complete in the sense that not every sentence or its negation is provable, or else in the sense that one can add a nonprovable formula without obtaining as consequences all formulas. This makes modal terms nontrivial. Aristotle, and many other philosophers, did not consider noncomplete systems, and only for such systems are the modal terms interesting.

HIZ, Henry. On The Inferential Sense Of Contrary-to-Fact Conditionals. *J Phil* 48,586-587 S 51.

This article states that the contrary-to-fact conditionals are meta-statements asserting that if we assume a sentence, we obtain as a consequence another sentence. It is a contrary-to-fact, if we know that the sentence that we assume is false. It is neutral-to-fact, if we do not know whether it is true or false. In both cases it is a statement about the consequences of assumptions.

HIZ, Henry. Questions And Answers. *J Phil* 59,253-264 My 62. For Aristotle there are four fundamental kinds of questions: Is it so? Why? Is it there? What is it? In a linguistic theory we may consider explicit and implicit answers. A question may be regarded, following Ajdukiewicz, as *For what x, f(x)*. English does not have direct questions of adjectives; instead it introduces classifiers: What kind of music do you like? What manner of man do you respect? It is difficult to question composite English sentences. In order to do so, one uses nominalizations of various parts of speech. Conceptual questions, What is a palimpsest? are different from other questions.

HIZ, H. Extendible Sentential Calculus. *J Sym Log* 24,193-202 S 59. This article states that it is possible to find such axioms and rules of inference of the classical sentential calculus that all and only classical two valued tautologies are the theorems, but the system is not Post complete; it is possible to add to the system a formula which is not a theorem without obtaining every formula as a consequence.

HIZ, H. Inferential Equivalence And Natural Deduction. *J Sym Log* 22,237-240 S 57. This article is an examination of some sets of axioms which, in effect, assert that a formula is equivalent to a (finite) set of formulas, equivalent in the sense that the formula is derivable from the set and each formula of the set is derivable from the formula.

HIZ, H. Types And Environment. *Phil Sci* 24,215-220 JI 57. In this article the idea of division of segments of speech by their complementary distributions is formulated formally, using the logical operation of concatenation, in this case restricted to what can co-occur in a language. It is shown that the complementary distribution does not give a unique solution for classification of segments of speech and that other methodological criteria must be used.

HOAGLAND, Hudson. The Brain And Crises In Human Values. *Zygon* 1,140-157 Je 66.

HOBART, Charles W and Warne, Nanci. On Sources Of Alienation. *J Existent* 5,183-198 Fall 64.

HOBART, Charles W. Freedom, A Neglected Area For Social Research. *Ethics* 75,153-165 Ap 65.

"Freedom" has several meanings of importance to behavioral science, is amenable to empirical inquiry, and ought to receive attention by social scientists. A sociology of freedom is necessary to bridge the gap between the humanities and social sciences. The social sciences have emphasized man as conditioned and determined, but there are senses in which man is free and the empirical study of these can be used to nurture freedom rather than for purposes of control. One particular kind of freedom, self-determination, appears to be central for these purposes. Mead, Riesman, Adler, Bay, and others have contributed importantly to its understanding.

HOCHBERG, Herbert. 'Possible' And Logical Absolutism. *Phil Stud* 6,74-76 1955.

HOCHBERG, Herbert. Albert Camus And The Ethic Of Absurdity. *Ethics* 75,87-102 Ja 65.

Albert Camus's analysis of the absurdity of the human condition rests upon equivocations and dubious metaphysics. What is true in it is relatively trivial. Camus unsuccessfully tries to build an ethic upon the condition of absurdity. This ethic maintains the absolute value both of life and of freedom against nihilisms and places rebellion against death at the core of social ethics. Recognizing the possibility of conflict between the two absolute values of life and freedom, Camus introduces a notion of "just assassin" which is inadequate to his philosophical dilemma.

HOCHBERG, Herbert and Bergmann, Gustav. Concepts. *Phil Stud* 8,19-26 1957.

HOCHBERG, Herbert. Elementarism, Independence, And Ontology. *Phil Stud* 12,36-42 1961.

HOCHBERG, Herbert. Moore's Ontology And Non-Natural Properties. *Rev Metaph* 15,365-395 Mr 62.

The author argues that Moore's unclear distinction between natural and non-natural properties, as set forth in *Principia Ethica*, stems from the complicated and confused ontology to which he then subscribed. Characterizing his position as a tempered nominalism, he first examines Moore's views on ontological entities and ontological ties or structural relations such as exemplification and containment and discusses Moore's distinction between being and existence. He then explores the ontology presented in Moore's 1899 paper, "The Nature of Judgment," and considers Moore's view that unlike other properties goodness is exemplified rather than contained in objects.

HOCHBERG, Herbert. On Being And Being Presented. *Phil Sci* 32,123-136 Ap 65.

HOCHBERG, Herbert. On Pegasizing. *Phil Phenomenal Res* 17,551-554 Je 57.

HOCHBERG, Herbert. Ontology And Acquaintance. *Phil Stud* 17,49-54 1966.

The article attempts to throw light on question of whether a principle of acquaintance is a guide in ontology. The author examines views of both those who claim to be acquainted with such things as substrata or universals and those who hold that they are acquainted only with phenomena (qualities). He argues that the principle of acquaintance functions to differentiate between qualities, but does not give assurance that one is acquainted with universals. He concludes that adherence to the principle of acquaintance forces one to abandon substrata.

HOCHBERG, Herbert. Physicalism, Behaviorism And Phenomena. *Phil Sci* 26,93-103 Ap 59.

HOCHBERG, Herbert. Professor Quine, Pegasus, And Dr Cartwright. *Phil Sci* 24,191-203 Ap 57.

HOCHBERG, Herbert. Professor Storer On Empiricism. *Phil Stud* 5,29-30 1954.

HOCHBERG, Herbert. St Anselm's Ontological Argument And Russell's Theory Of Descriptions. *New Scholas* 33,319-330 JI 59.

HOCHBERG, Herbert. The Ontological Operator. *Phil Sci* 23,250-259 JI 56.

HOCHBERG, Herbert. Things And Descriptions. *Amer Phil Quart* 3,39-47 Ja 66.

The article examines certain consequences of treating things as classes of properties as Russell once suggested. In so doing it considers the use of different types of descriptive phrases to refer to things. The primary point is to argue that arguments holding that relational properties may not be used to uniquely characterize individuals, since such relations require distinct individuals to stand in them, are invalid. Hence individuating descriptions may be based on such properties and those philosophers who are led to accept proper names which name substrata on such grounds are misled.

HOCHBERG, Herbert. Universals, Particulars, And Predication. *Rev Metaph* 19,87-102 S 65.

The author contends that the radical differences between the arguments that lead to the acceptance of particulars and those that lead to universals reveal the former to be specious. To support his thesis, he defines and examines three conflicting views on the problem of universals. He also considers the ontological ties of exemplification and combination postulated by these positions and discusses the nature of relational properties.

HOCHBERG, Julian and Black, Max and Gombrich, E H. *Art, Perception, And Reality.* Baltimore Johns Hopkins Pr 1972.

These essays are concerned with the nature of representation in art. On the other hand, Hochberg finds such an explanation unsatisfactory and offers as an alternative an explanation based upon a theory of perception which involves "skilled sequential purposive behavior." Related to this theory is the explanation of representation in the arts as concerning canonical forms of objects and encoded visual expectancies. Max Black's concern is with the linguistic analysis of representation or depiction in painting. His conclusion is that one cannot specify a necessary condition for this phenomenon because it is a cluster or range concept. This conclusion is drawn after an analysis of the appeal to causal history, resemblance, embodied "information," and the producer's intention as necessary conditions for representation.

HOCHSTETTER, Erich. Nominalismus. *Fran Stud* 9,370-403 D 49.

HOCK, Alfred. *Reason And Genius: Studies In Their Origin.* NY Philosophical Lib 1960.

An Examination of the power of human reason and its superior manifestation in those called genius, this short study emphasizes the organic and developmental aspects of life from its first appearance to its most developed action. Human reason is recognized as a higher manifestation of that cellular adaptation and development which is the historical as well as the organic foundation of human behavior. Genius, approached through the study of the men who make up this class, is not considered to

be a "lucky coincidence" but the response of a man to the environmental problems. Extraordinary accomplishments, the mark of genius, is partially the result of hereditary disposition but more importantly the result of "experience and knowledge," both environmental products.

HODGES, Donald Clark. And The Withering Away Of Social Philosophy. *Phil Phenomenol Res* 25,463-476 Je 65.

Four problems are raised in this essay: Why has social philosophy become

impoverished? In what respects is it withering away? Does its dissolution contribute to the advancement of knowledge in the social sciences? What effect has its eclipse had upon the humanization or dehumanization of knowledge? The following answers are offered: (1) social scientists have appropriated everything of scientific interest in social philosophy while philosophers have reduced it to a branch of logical and linguistic analysis; (2) social scientists have made philosophers superfluous as liaison agents between the social sciences, as analyzers of the generic traits of group life, as methodologists and social theorists; (3) the elimination of normative and metaphysical subject matter has contributed to increasing specialization of knowledge; and (4) social scientists have yet to develop a science of human wants or a concern for socially significant problems to take the place of now obsolete normative theories.

HODGES, Donald Clark. Punishment. *Phil Phenomenol Res* 18,209-218 D 57.

HODGES, Donald Clark. Reward. *Phil Phenomenol Res* 19,198-211 D 58.

The various meanings of "reward" are discussed. There are retributive—an equal or proportional return for merit (for the sake of duty), and non-retributive—an instrument of human welfare having for its end the increase of happiness. The juridical concept of reward, as proportioned to desert, and yet its application being limited by a regard for the general welfare, is an alternative. The author thinks that reward (as in the juridical) is a form of justice. Both the retributive and non-retributive are qualified by a principle superior to them. Rewards that are just are necessarily retributive.

HODGES, Donald Clark. The Dual Character Of Marxian Social Science. *Phil Sci* 29,333-349 O 62.

HODGES, Donald Clark. The Golden Rule And Its Deformations. *Personalist* 38,130-148 Spr-Apr 57.

HODGES, Donald Clark. The Politics Of Language And The Science Of Politics. *Phil Phenomenol Res* 24,366-374 Mr 64.

The author questions the widely shared conviction that political science can be politically neutral. He explores the significance of normative presuppositions in the scientific theories of politics, and concludes that political science has disguised normative statements and presuppositions. The descriptive and explanatory should be separated and distinguished from the partly normative collection of principles which are frequently tacit.

HODGES, Donald Clark. The Relevance Of History To Moral Discourse. *Phil Phenomenol Res* 21,199-206 D 60.

This study centers around objectively in the use of ethical language. A distinction is drawn between ordinary and refined uses of ethical terms. Philosophy must abandon, if it wishes to define moral terms objectively, its effort to provide a unitary basis for morality. It is concluded that neither the ordinary nor the refined use of ethical terms is sufficient to introduce objectivity into ethical language. Another method is required—the historical method, which is a study of cultures. The example given is that of "evil" and how it is correlated historically with moral values of a particular class and culture. It is urged that cultural history be first, and then philosophical analysis second.

- HOENIG, J.** Karl Jaspers And Psychopathology. *Phil Phenomenol Res* 26,216–229 D 65.
In his *Allgemeine Psychopathologie* Jaspers has managed to survey almost the entire psychiatric literature of his time. The aim of the book is to make psychopathology critically self-aware of its own methods. The two main contributions of the book are the phenomenological approach and the distinction between "understanding" and "explaining." *Phenomenology*: Jaspers uses this purely as an empirical method to bring before our eyes what the patient actually experiences. Thus we come to recognize such phenomena as hallucinations, phobias, thought disorder, etc. *Meaning and Cause*. There are two modes of apprehension of psychic phenomena: (a) The empathic understanding of meaning, (b) The explaining of causal connections. Causal connections are universal, meaning is not. *psychoanalysis*: What Freud described as causal connections are really meaningful connections—the mode in which therapy becomes effective is questionable.

This article examines the cognitive character of mystical experience, noting, in particular, what is involved, from a linguistic point of view, in making a claim. The author argues that in order to put forward a claim, we must be able not merely to utter sounds (or make marks) but to speak a language. And speaking a language involves following linguistic rules. He concludes that the mystic, in not following linguistic rules, is not making a genuine knowledge claim.

The author claims that one knows other minds through an analogical inference, the procedure of which cannot have a proof of its validity. If by "knowledge of other minds" is meant a kind of knowledge the criterion for which is the certainty of self-knowledge, then there cannot be knowledge of other minds. The existence of such knowledge would be a logical contradiction. Nevertheless, it is meaningful to speak of other persons' experiences. It may be that one is never able to know anything about the feelings or sensations of another person; but, it is not meaningless, that one is sometimes able to make true statements about the content of other minds.

HOFSTADTER, Albert. *Agony And Epitaph: Man, His Art And His Poetry*. NY Braziller 1969.

In this text the author develops a theory of man based upon a definition of being as the act of belonging. Through consciousness man is able to see what is and is not his own. Through artistic creation man is able to make his own what is alien to him. In art the particular oneness of our age departs from a presentation of the beautiful and manifests itself in a presentation of feeling, the means for determining what does and does not belong to man. How oneness appears in the arts is developed through an analysis of poetry, which is taken as a paradigm for all art. Poetry is discussed as being both a symbol and not a symbol. It is not symbolic in the sense that it does not point to something beyond itself, but it is symbolic in the sense that its being is a symbol of man's being. The text concludes with an essay which presents the thesis that the oneness of love is the ultimate source of all human belonging.

HOFSTADTER, Albert. *Truth And Art*. NY Columbia Univ Pr 1965.

The author assigns to aesthetics a philosophical centrality in the manner of the Kantian tradition and German idealism. The thesis he advances is characteristically fresh and is designed to answer problems that have become central in recent discussion. He combines his own analysis with critical suggestions from the writings of Dewey, Heidegger, Husserl and the more recent treatments of symbolic form and language. The theory of language and truth developed here is in turn applied to the problems of art. By distinguishing between three basic and sequential forms of truth, the author is able to show how approaches to art result when each form of truth is given primacy over others. He argues that truth of art is more than "truth about." The main point is that "the essence of art is the articulation of human being, i.e., of the spiritual being of man." This thesis is placed within a broader philosophical framework which purports to show how science, practical life, and art as the truth of spirit can be all treated in a single context.

HOFSTADTER, Albert. The Tragicomic: Concern In Depth. *J Aes Art Crit* 24,295–302 Wint 65.

HOFSTADTER, Albert. Truth Of Being. *J Phil* 62,167–182 Ap 65.

Theoretical, practical, and ontological truth are described in order, with emphasis on the last. Truth is understood in terms of the adequation relation between intended and actual entity. Theoretical truth is adequation of intended with actual entity, practical truth adequation of entity to intended norm. In ontological truth the adequation relationship present externally in theoretical and practical truth is internalized within the true entity. The concept applies to artificial entities due to the constituting power of the mind that intends them. It applies to persons by way of their own immanent intentionality. An intentionalistic entity's essence is of the nature of a potency consisting in an endeavor after essence and actuality. For it, to be is to be a hunger for truth of being. This is described for persons in the ethico-social sense and in the sense of the full possibility of their being: truth of personal being.

HOFSTADTER, Albert. Universality, Explanation, And Scientific Law. *J Phil* 50,101–114 F 53.

HOFSTADTER, Albert. Validity Versus Value: An Essay In Philosophical Aesthetics. *J Phil* 59,607–616 O 62.

Aesthetics is commonly conceived as a value discipline. All the various theories of aesthetic value judgment fail, however, to recognize the essential aesthetic fact for what it is, one not primarily of value but of validity. Nothing is as fatal to aesthetic discernment and aesthetic philosophy as this tendency to confuse the beautiful—the central aesthetic phenomenon—with the good, validity with value. To say that works of art have aesthetic value is not so much false as it is absurd. This thesis, which concerns proper philosophical, not ordinary, usage, is developed and defended in the paper.

HOLLAND, L Virginia. *Counterpoint: Kenneth Burke And Aristotle's Theories Of Rhetoric*. NY Philosophical Lib 1959.

This is the first full study of the contemporary American literary critic Kenneth Burke. The author's main aim is to acquaint the reader with Burke's doctrines. To this end Burke's books and journal articles are considered in terms of his own categories. These are "rhetoric," "action," "identification," "form," and "society." Since Burke has always maintained that his position is close to Aristotle's the writer of this critical study sets out to discover if this is so. Her hypothesis is: "Burke's rhetorical theory is like Aristotle's, and although it has some innovations, these do not conflict with Aristotle's views of rhetoric, but rather are implicit in them." The first four chapters are devoted to Burke's critical theories; the last four to a comparison of Burke and Aristotle in terms of the conception of rhetoric and of methodology that each has.

HOLLAND, R F. A Disclaimer. *Phil Rev* 66,239-241 Ap 57.

HOLLAND, R F. The Miraculous. *Amer Phil Quart* 2,43-51 Ja 65.

Although the idea of a violation of natural law is not necessarily involved in the idea of the miraculous, there is *one kind* of miracle which seems to involve it. Hume's discussion of the evidence for miracles relates to this kind and is interpretable as an argument against its possibility. Also there is an argument that the expression "violation of natural law" signifies a confusion in which the ideas of natural law and legal law collapse into each other. Neither of these arguments is efficacious. Furthermore, the contention that there can be no such thing as establishing the absence of a natural cause is open to objection. However, to be conceived as a violation of natural law, a miracle must be thought of as an occurrence which is both empirically certain and conceptually impossible—which ought to make the notion ridiculous. And yet it need not.

HOLLEY, Frank C. Context And The Analytic. *Educ Theor* 9,165-168 Jl 59.

HOLLINGDALE, R J. *Nietzsche: The Man And His Philosophy*. Baton Rouge 1965.

This intellectual biography of Nietzsche provides a brief guide to the study of his thought and draws on much recent German scholarship. The interpretation of Nietzsche's principal ideas is based on those works which Nietzsche himself published and assumes "that anything in the *Nachlass* [made up of abandoned drafts] which cannot be paralleled in the published work is *not valid*." The work centers on the philosophy of power which the author sees as Nietzsche's positive contribution to contemporary thought. "To say that Nietzsche was a (perhaps unintentional) nihilist or an existentialist, and nothing more, involves robbing his philosophy of all positive content." With very full quotation of textual evidence it is argued that Nietzsche retained his critical powers through failing health until the collapse of 1889 although he did have an increasingly grandiose self-image.

HOLLINGWORTH, Harry Lewis. *Psychology And Ethics: A Study Of The Sense Of Obligation*. NY Ronald Pr 1949.

HOLLISTER, William W. *Government And The Arts Of Obedience*. NY King's Crown Pr 1948.

In this work, Mr Hollister makes a significant contribution not only to the substance of theoretical analysis in politics but also to the method. The work is not an attempt to re-examine the grounds of political obligation, to re-appraise the ethical bases of men's obligation to obey laws in particular, or political authority in general. Yet it would be a mistake to infer that Mr Hollister is unconcerned with this fundamental matter, or that his approach and treatment are either purely descriptive or purely positivistic. He has, indeed, a profound conviction of the desirability of consent, of representation of two-way communication, as constituting the practicably ideal form of government and obedience.

HOLLOWAY, Maurice. Man And Mr Huxley. *Mod Sch* 20,157-164 Mr 43.

HOLMER, Paul F. *Theology And The Scientific Study Of Religion*. Minneapolis Denison 1961.

Holmer attempts to make clear a distinction between "learning about religious matters and the learning (and language) that flows forth from the religious life." Holmer insists that the contemporary Christian must take seriously the language of theology and doctrine. Religious faith, the author says, is a matter of passion, of attitude and of obedience. But, religious faith must also be articulated in a meaningful way in the contemporary world, else religious language becomes only emotive and therefore meaningless. In order to demonstrate what he finds to be examples of the scholarly and scientific study of religion, Holmer surveys a number of contemporary theologians and philosophers. In their concern for religion (and the orderly and systematic way they go about this concern) they demonstrate that "there is indeed a language of faith, different in kind and scope from both the everyday patois and the language of scientific study."

HOLMER, Paul L. Kierkegaard And Ethical Theory. *Ethics* 63,157-170 Ap 53.

HOLMES, Arthur F. *Christian Philosophy In The 20th Century: An Essay In Philosophical Methodology*. Nutley NJ Craig Pr 1969.

HOLMES, Arthur F. Martian Unicorns Or Blue Cats: An Essay On Philosophical Method. *Phil Phenomenol Res* 24,135-142 S 63.

HOLMES, Arthur F. Moore's Appeal To Common Sense. *J Phil* 58,197-206 Ap 61.

This article examines Moore's appeal to common sense and contends that he has provided therein a philosophical starting point that merits serious consideration. The author sees only two alternatives to the view that certain truths—i.e., truths that cannot be denied without self-contradiction—provide the foundation of philosophy. Either we neglect analysis or we welcome contradiction.

HOLMES, Arthur Frank. *Faith Seeks Understanding: A Christian Approach To Knowledge*. Grand Rapids MI Eerdmans 1971.

HOLMES, E C. *Social Philosophy And The Social Mind: A Study Of The Genetic Methods Of J M Baldwin*. NY Holmes 1942.

Holmes' study of these three important figures in the development of American thought is clarifying and rewarding. Holmes contrasts and orients methods and ideals: Baldwin's "societal preservation" which forbids rebellion against the "state"; Mead's strangely Hegelian notion of "mind" and his resulting scepticism of democratic control and reliance upon the "state" as the guardian of interests; Boodin's "group will" which has a distinct individuality of its own, dragging him back to the paradox of achieving spiritual individuality in the cultural community, in a superstate. Here is the reduction of three of the most popular attempts to state a social philosophy indigenous to American life and expressive of observable democratic instincts.

HOLMES, Oliver W. *Human Reality And The Social World: Ortega's Philosophy Of History*. Amherst Univ Of Mass Pr 1975.

This study of José Ortega y Gasset's philosophy of history is grounded in an examination of his notion of "human life" as the radical or fundamental reality. The key element here is Ortega's conception of the historicity of human reality. With this as the background the author proceeds to examine what Ortega meant by the social world, treating first his concept of "generation" and, finally, what is history. The book is the first in English to connect Ortega with Neo-Kantism, Phenomenology, and Historicism—all of which throws additional light on Ortega's philosophy of history, both man as history and history as generations.

HOLMES, Robert L. Descriptivism, Supervenience, And Universalizability. *J Phil* 63,113-119 Mr 66.

By saying that it is in virtue of their descriptive meaning that moral judgments are universalizable, R M Hare creates for himself a problem similar to the one G E Moore faced and could not successfully resolve with respect to intrinsic value, viz., that of explaining the exact relationship between moral and non-moral properties. Nothing less than a necessary connection will do the jobs they expect of their respective

- ethical systems. But for Hare, unlike for Moore, to insist upon this seems to commit him to saying that the connection is analytic. From this there follows, first, a concession to ethical naturalism of a sort that many universalists are unwilling to make, and secondly, a conflict between universalizability and prescriptivity. The upshot is that the universalist of Hare's variety cannot have universalizability, descriptiveness and prescriptivity each in the sense he wants it without inconsistency.
- HOLMES, Robert L.** John Dewey's Moral Philosophy In Contemporary Perspective. *Rev Metaph* 20,42-70 S 66.
- To support his argument that Dewey did not subscribe to ethical naturalism, the author first reviews the arguments in favor of a naturalistic interpretation and considers Dewey's position on metaethical issues. He then reconstructs Dewey's account of moral judgments: a judgment expresses the moral way of life if and only if (a) it is made with a view to promoting the good, and (b) it is warranted and verifiable from an empirical standpoint, that is, it issues not from habit or impulse but from a reflective survey of the facts and can be supported by reasons.
- HOLMES, Robert L.** On Generalization. *J Phil* 60,317-322 Je 63.
- Marcus Singer (*Generalization in Ethics*) argues that justification of a genuine moral judgment presupposes the *generalization argument*: "If the consequences of everyone's doing *x* would be undesirable, then no one ought to do *x*." Concern centers on the deduction of this proposition. It is argued that the inference from an assertion about the collective consequences of everyone's doing *x* to an assertion about what someone ought to do leads to a dilemma which is avoided only by so qualifying the argument that its conclusion would have limited application and could no longer be considered a presupposition of all moral justification.
- HOLMES, Robert L.** The Development Of John Dewey's Ethical Thought. *Monist* 48,392-406 Jl 64.
- An examination of the importance of Dewey's account of judgments and propositions in the development of his thought reveals that the conventional interpretations of his ethics are misleading, particularly on questions of (a) the relationship between science and ethics, (b) the relationship between practical judgments and descriptive statements, and (c) differentiae between moral and scientific judgments within the genus practical judgment. A review of his account shows that he views the whole relationship of moral to scientific judgments, hence of science to ethics, in a different light than is generally supposed; and that, in consequence, much of his ethics needs reappraisal as having relevance to topics in the forefront of contemporary British and American ethical philosophy.

- HOLTON, Gerald (ed).** *Science And The Modern Mind: A Symposium*. Boston Beacon Pr 1958.
- Guerlac, Harcourt Brown and Santillana consider how science influenced culture in the 17th and 18th centuries. Philipp Frank, Robert Oppenheimer and Jerome Bruner consider the contemporary change in the concepts of science, and how this affects our world views. P W Bridgman, Charles Morris and Howard Mumford Jones reject a view that science and the humanities are in detrimental conflict, but see no way to bring unity into the pattern of the world.
- HOLTON, Gerald And Others.** Do Life Processes Transcend Physics And Chemistry? *Zygon* 3,442-472 D 68.
- HOLTON, Gerald.** *Thematic Origins Of Scientific Thought*. Cambridge Harvard Univ Pr 1973.
- Case studies of the growth of ideas of Kepler, Newton, Einstein, Bohr, and others demonstrate that the traditional view of how the scientific mind works must be changed and supplemented. In particular, analysis of the thematic content of science—a dimension orthogonal to the empirical and analytical content—demonstrates the crucial role of themata in the initiation and acceptance of individual scientific insights. The case of the origins of relativity theory is singled out for study in depth, drawing in part on unpublished documents in the *Nachlass* of Einstein.
- HOLTON, Gerald.** Einstein, Michelson, And The "Crucial" Experiment. *Isis* 60,133-197 1969.
- The relation between A A Michelson's experiments and A Einstein's special theory of relativity forms a case study for many questions of philosophic and historic interest regarding modern science. Examination of all relevant published and unpublished documents in the Einstein archives reveals that, contrary to popular belief, pedagogic accounts, or experimentalist philosophers, the documents support Einstein's repeated assertion that Michelson's experiments played at most only a small, indirect role in the genesis of Einstein's relativity theory.
- HOLTON, Gerald.** Johannes Kepler: A Case Study On The Interaction Of Science, Metaphysics, And Theology. *Phil Forum (Boston)* 14,21-33 1956.
- HOLTON, Gerald.** Mach, Einstein, And The Search For Reality. *Daedalus* 97,636-673 Spr 68.
- This essay, a portion of a more extensive study, is concerned with Albert Einstein's gradual philosophical re-orientation, from a philosophy of science in which sensationism and empiricism were at the center, to one in which the basis was a rational realism. Einstein's largely unpublished scientific correspondence provides many clues to the development of his thinking, to the early influence of Ernst Mach, and to the evolution of Einstein's thought after the early development of relativity theory.
- HOLTON, Gerald.** On Being Caught Between Dionysians And Apollonians. *Daedalus* 103,65-81 Sum 74.
- The scientist is caught between two groups of critics. One, the "new Dionysians," primarily social and cultural critics, agree in their suspicion or contempt of conventional rationality and in their conviction that the consequences of science and technology are preponderantly evil. The other group includes certain philosophers; they are the "new Apollonians," who advocate confinement to the analytical side of science, and restrict the meaning of rationality to statements whose objectivity seems guaranteed by the consensus in public science.
- HOLTON, Gerald.** On The Role Of Themata In Scientific Thought. *Science* 188,328-334 25 Ap 75.
- Thematic analysis of scientific work allows the investigation of recurring, identifiable conceptual elements that constrain or motivate the individual, guide the scientific community, and determine the course of controversies. Distinctions are made between the thematic concept, the methodological thema, and the thematic proposition or hypothesis. The relatively small number of themata, their antiquity and persistence, the frequent coupling of themata in antithetical mode, and the interdisciplinary sharing of a thema within science are discussed, and used is a thematic analysis of the work of the physicist Steven Weinberg.
- HOLTON, Gerald.** The Roots Of Complementarity. *Daedalus* 99,1015-1055 Fall 70.
- Niels Bohr's 1927 introduction of complementarity transformed the course of quantum physics and raised important problems for the philosophy of science. This is an analysis of the roots from which Bohr's point of view came to be developed, and the goals of his achievement. It is shown that his proposal was an attempt to make complementarity the cornerstone of a new epistemology, and to emphasize the universal significance of the new concept, in fields far beyond physics.
- HOLTON, Gerald.** The Thematic Imagination In Science. *Graduate Journal* 7,87-109 1965-66.
- Current professional and popular accounts of scientific procedures largely neglect discussion of the source of the original induction and of the criteria of preselection at work in scientific decisions. A specific example from Newton's *Principia* illustrates the need to look beyond the explicit explanation of procedure to the position and role of themata in the scientific imagination. The themata used by a scientist are usually left implicit. Themata are largely continuous throughout the development of science, but may be most obvious when a science is young.

- HONDERICH, Ted.** *Political Violence*. Ithaca NY Cornell Univ Pr 1976.
- In Chapter 1 he provides an empirical framework for subsequent discussion of violence and its relation to inequality. He considers several prohibitions against violence based on morality and irrationality and concludes that such prohibitions are not absolute. He then presents a "principle of equality" by which to evaluate political violence. In Chapter 2 the author analyzes two arguments concerning the obligation to obey the law and he concludes that legal obligation does not serve as an absolute prohibition against political violence. In Chapter 3 the author compares political violence and democracy and he concludes that political violence shares certain features with the practice of democracy and that at least some political violence is morally justified.

HOOK, Sidney (ed). *Determinism And Freedom In The Age Of Modern Science*. NY New York Univ Pr 1958.

HOOK, Sidney (ed). *Dimensions Of Mind: A Symposium*. NY New York Univ Pr 1960.

HOOK, Sidney (ed). *Human Values And Economic Policy: A Symposium*. NY New York Univ Pr 1967.

HOOK, Sidney (ed). *John Dewey: Philosopher Of Science And Freedom*. NY Dial Pr 1950.

HOOK, Sidney (ed). *Language And Philosophy, A Symposium*. NY New York Univ Pr 1969.

This book is divided into three parts: "Language and Culture," "Linguistics and Philosophy," and "Logic and Language." The principal papers are by Floyd Lounsbury, Noam Chomsky, and Paul Ziff respectively.

HOOK, Sidney (ed). *Law And Philosophy, A Symposium*. NY New York Univ Pr 1964.

This volume brings together lawyers and philosophers to discuss questions which border on both fields: the relation of law to ethics, the concept of natural law, and the nature of juridical reasoning.

HOOK, Sidney (ed). *Philosophy And History, A Symposium*. NY New York Univ Pr 1963.

This is the fifth stimulating Symposium of the New York University Institute of Philosophy. It brings together philosophers and historians to discuss problems of the nature and methods of history, particularly historical narrative, historical explanation, and historical objectivity.

HOOK, Sidney (ed). *Psychoanalysis, Scientific Method And Philosophy*. NY New York Univ Pr 1959.

HOOK, Sidney (ed). *Religious Experience And Truth*. NY New York Univ Pr 1961. The contents of this volume are: Part I, "The Meaning and Justification of Religious Symbols"; Part II, "The Nature of Religious Faith"; Part III, "Meaning and Truth in Theology."

HOOK, Sidney (ed) and Kurtz, Paul (ed) and Todorovich, Miro (ed). *The Idea Of A Modern University*. Buffalo NY Prometheus Books 1974.

This work consists of forty-five essays, comments, and replies by scholars who convened to consider the plight of the American university. The work responds to an obvious need—the need to consider foundational problems of the university from a variety of viewpoints. It is divided into three parts: the first devoted to universal higher education; the second to politicalization of the university; the third to a miscellany of problems including collective bargaining, the affirmative-action program of HEW, and tenure.

HOOK, Sidney (ed) and Kurtz, Paul W (ed) and Todorovich, Miro (ed). *The Philosophy Of The Curriculum: The Need For General Education*. Buffalo NY Prometheus Books 1975.

This book is an anthology representing an essentially liberal and meliorist view of educational reform. The essayists offer a critical review of the situation of the undergraduate curriculum. The essays are organized under traditional rubrics—humanities, social sciences, sciences. Critics of the curriculum from left and right, e.g., those concerned with "de-schooling" society, or with radicalizing the university, or with re-establishing essentialist education—are absent.

HOOK, Sidney. *Education And The Taming Of Power*. La Salle IL Open Court 1973.

This work is a collection of eighteen essays dealing with issues concerning progressive education which have arisen since John Dewey's death. These essays have been classified under three headings. Part I is entitled as "Studies in the Educational Philosophy of John Dewey," Part II as "Problems in Professional Education," and Part III as "Appendix."

HOOK, Sidney. *Education For Modern Man*. NY Dial Pr 1946.

HOOK, Sidney. *Heresy, Yes—Conspiracy, No*. NY Day 1953.

HOOK, Sidney. *Hero In History: A Study In Limitation And Possibility*. Boston Beacon Pr 1955.

HOOK, Sidney. *Marx And The Marxists: The Ambiguous Legacy*. Princeton NJ Van Nostrand 1955.

This is a brief introduction dealing with "the issues which have divided Marxists from non-Marxists and Marxists from each other," and is designed to tempt the reader to further study of "the ambiguous legacy." In Part I, Professor Hook expounds critically the orthodoxy of Marx, Engels, Kautsky, and Plekhanov; the revisionism of Bernstein and Jaurès; its development in Lenin, Trotsky, and Stalin; and an evaluation of its contemporary status. Part II illustrates by brief selections the central doctrine, its modifications, and some of its applications to history, morality, and culture.

HOOK, Sidney. *Metaphysics And Historicity, The Aquinas Lecture*, By Emil L Fackenheim. *Hist Theor* 3,389–392 1964.

HOOK, Sidney. *Political Power And Personal Freedom: Critical Studies In Democracy, Communism, And Civil Rights*. NY Criterion Books 1959.

HOOK, Sidney. *Pragmatism And The Tragic Sense Of Life*. NY Basic Books 1974.

This collection of essays elaborates the author's pragmatic philosophy, first through some direct statements and then by critiques of other thinkers. By applying rational scientific intelligence to our moral and social problems, we can optimize the available goods within a situation while acknowledging our limits by recognizing that there are other values we have failed to attain. This liberal vision is compared and contrasted with the views of Dewey, Hegel, Hartmann, Popper, Vivas, Reinhold Niebuhr, Tillich, and Polanyi.

HOOK, Sidney. *Reason, Social Myths And Democracy*. NY Day 1940.

This book is devoted to a logical analysis of contemporary social theories and their broader philosophical implications. The earlier essays appraise some of the more dynamic contenders to social doctrine which have been put before our generation; while the later ones analyze, from a philosophical point of view, the meaning of the

theory of dialectical materialism. The connection between the first part of this book ("Conflicts in Social Doctrine") and the second ("Science and Mythologies of Reason") is thus the natural development of searching questions about society driven home to their ultimate philosophical assumptions.

HOOK, Sidney. *The Paradoxes Of Freedom*. Berkeley Univ Of Calif Pr 1962.

In the opening chapter Hook attacks the absolutist conception of human rights. He argues that there is inescapable conflict among a multiplicity of rights and that our only absolute obligation is to be intelligent and intelligently to resolve these conflicts. In the second chapter Hook asks whether the Supreme Court's power of judicial review over Congress is compatible with democratic theory. He first shows that the Court is not genuinely limited in its power in many of the ways often suggested. His suggestion is that the Court nullify Congressional action only when unanimous and that even a unanimous veto be overridden by a two-thirds vote of Congress. In the final chapter he takes up the justification of civil disobedience and revolution. He holds that one is justified in disobeying a law that is the product of democratic processes only if one is willing to accept the punishment entailed by this defiance. He attacks both those who hold that the majority can legitimately vote to abolish majority rule and those who wish to abandon the experiment of self-government for the sake of survival in a thermo-nuclear age.

HOPKINS, Jasper. *A Companion To The Study Of St Anselm*. Minneapolis Univ Of Minnesota 1972.

This guide to the writings of Saint Anselm provides a comprehensive introduction to his philosophy and theology, showing clearly his relation to Augustine. Chapter I discusses Anselm's basic writings and sources. Successive chapters deal not only with the more philosophical issues of truth, freedom, and evil but also with the specifically theological themes of trinity, incarnation, and redemption.

HOPKINS, Jasper. Bultmann On Collingwood's Philosophy Of History. *Harvard Theological Review* 58,227–233 Ap 65.

In *History and Eschatology* Rudolf Bultmann sanctions R G Collingwood's theory of history as the re-enactment of past thought, while criticizing his view that "all history properly so called is the history of human affairs." I show how Bultmann has misinterpreted Collingwood; and I explain why Bultmann ought to have criticized the theory of re-enactment while sanctioning the view that history is of human affairs.

HOPKINS, Jasper. Sartrean Philosophy And Existential Psychotherapy. *Human Inquiries* 10,83–92 1970.

Sartre's phenomenological characterization of love, hate, generosity, and indifference misrepresents human reality. Yet, his existential-psychoanalytic categories retain a kind of validity, even though they abrogate the distinction between neurosis and normalcy.

HOPKINS, Jasper. Theological Language And The Nature Of Man In Jean-Paul Sartre's Philosophy. *Harvard Theological Review* 61,27–38 Ja 68.

Students of J-P Sartre's atheistic philosophy are struck by his unabashed use of

- theological idiom. This usage is explored in the light of Sartre's philosophical anthropology.

- HOROSZ, William.** *The Crisis Of Responsibility: Man As The Source Of Responsibility*. Norman . 1975.
- In a comprehensive survey, competing models of responsibility are rejected: youthful spontaneity, efforts to overcome the subject-object split, "totalistic participation," and man's purposiveness; so are theories of responsibility and various theories of humanistic psychology. Two basic theories of responsibility then confront modern man: "responsibility for" and "responsibility to." The solution is "the liberation of the human orderer for responsible participation in existence" and the radicalization of responsibility by making man "the center that radiates response-relations." All totalities "are but the human productions of man's search for wholeness." The bifurcation of "responsibility for" and "responsibility to" must be closed by man's "full 'responsibility for' his search for wholeness."
- HOROSZ, William.** *The Promise And Peril Of Human Purpose*. St Louis Green 1970.
- The author attempts to locate "purpose" within human nature itself as a precondition of all purposive activity. Thus, he identifies four levels: the ontological, defined as man's capacity for "self direction" and prior to all other purposiveness; the phenomenological, i.e., aims, goals; the analytical "intentionality," or decision-making and choosing; and the "artifactual," i.e., being directed by and directing oneself toward objects or things. Using this schema, Horosz deals critically with Heidegger as an instance of "pre-purposive" thinking and with Christian Humanism as "post-purposive," i.e., really traditional teleology reconstructed with more attention to secular problems yet still traditional. Included are useful discussions of Niebuhr, the "death of God" theologies, and the theme of alienation.

- HOROWITZ, Irving L.** *The Idea Of War And Peace In Contemporary Philosophy*. NY Paine Whitman 1957.
- The author offers critical appraisals of the views of a number of contemporary writers on war and peace. Among the philosophers whose views are analysed are Whitehead, Santayana, Russell, Maritain and Lenin. Attention is also given to such important thinkers as Tolstoy, Gandhi and Einstein. Although concentrating on their views of war and peace, the author develops, for each of the thinkers discussed, the philosophical context in which these ideas are expressed. The volume closes with a chapter on the author's own views: "Towards an Integrated Philosophy of Peace." An introductory essay, "Philosophical Orientation and Peace," is contributed by Roy Wood Sellars.

- HOROWITZ, Irving Louis.** *Philosophy, Science And The Sociology Of Knowledge*. Springfield IL Thomas 1961.
- Although valuable examinations of the history of the sociology of knowledge have been made by J J Maquet, Hans Barth, and Werner Stark, until now little has been done from a methodological and analytical perspective. Throughout, the author stresses the relation of the sociology of knowledge to established philosophic trends, the connection between epistemology and the social investigation of ideologies, the link between ideas in general and ideologies in particular, the empirical starting point and boundaries of the sociology of knowledge, the connection of the sociology of knowledge to the behavioral sciences, and the philosophic status of conflicting trends in the sociology of knowledge. The range is vast, for this is both a historical account of the awareness of the limitations upon thought, and yet a contemporary critical analysis of the empirical theories of knowledge.

HOSPERS, John. Some Problems Concerning Punishment And The Retaliatory Use Of Force. *Reason* 4 N 72.

This article is an examination of some problems concerning the use of force: (1) what constitutes force, (2) whether the initiation of force is ever justified, (3) the scope of threat of force as opposed to its actual use, (4) for what offenses legal punishment is justifiable, (5) the basis for punishment in those offenses meriting punishment.

HOSPERS, John. The Life And Death Of New York City. *Reason* 6,14-22 Ag 74.

This article is an analysis of the problems besetting New York City, centering largely in the interventions of government (federal, state, and local) with the operations of the market, leading to increased economic stagnation and poverty.

HOSPERS, John. The Two Classes. *Reason* 7,12-17 S 75.

A historical and contemporary exposition of the concept of "the two classes" in society: the producers (owners, managers, workers) and the parasites (those "on the take" from government, who receive government checks)—the first group supports the second group thru taxation. Today for the first time in American history the second group outnumbers the first. The article explains the implications of this ominous fact for the future of the US: loss of initiative and inability to save, debt and inflation to sustain the parasite class, the corruption of Congress, controls, followed by shortages, followed by dictatorship and totalitarian government.

HOSPERS, John. Will Free Market Courts And Police Suffice? *Reason* 5,19-23 My 73.

A defense of the view that minimal government, as opposed to no government (anarchy), is necessary for the preservation of a peaceful social structure.

HOURLANI, Albert (ed) and Brown, Vivian (ed) and Stern, S M (ed). *Islamic Philosophy And The Classical Tradition: Essays Presented By His Friends And Pupils To Richard Walzer On His Seventieth Birthday.* Columbia Univ Of S Car Pr 1972.

HOURLANI, George F. *Ethical Value.* Ann Arbor 1956.

The thesis of this essay in philosophical analysis is that ethical words are used referentially, that for the most part they have a single unitary sense, and that they refer to whatever is "happy-making" or satisfying. The author supports this conclusion by means of detailed refutations of some of the criticisms brought against naturalism, paying special attention to the "naturalistic fallacy" argument as developed by Moore, Ewing and the contemporary non-cognitivists. He concludes that philosophical analysis ought to reject the "method of introspection" in favor of inductive inquiries into the ways in which as a matter of fact people use ethical words.

HOUSTON, Jean. Psycho-Chemistry And The Religious Consciousness. *Int Phil Quart* 5,397-413 S 65.

This paper attempts to explore the phenomenon of psycho-chemically evoked states of consciousness similar to those attendant upon religious experience. It describes one of the research programs of The Foundation for Mind Research: the creation and clinical evaluation of religious-type experiences induced through the ingestion of LSD-25. Involving over one hundred case studies the program reveals that 40% of the subjects become involved in symbolic or phylogenetic experience wherein significant myth and ritual themes appear to be experienced or "lived" with dramatic clarity. Only a few subjects would seem to undergo religious or mystic-type experience. Those who have, however, report a remarkable similarity in the structure and development of their experience—often speaking in terms of well-known religious and mystical analogues. The paper concludes with a descriptive phenomenology of the religious consciousness as it is evoked in the LSD experience.

HOWARD, Dick. *The Development Of The Marxian Dialectic.* Carbondale S Illinois Univ Pr 1972.

Howard argues that the dialectic is the key to Marx's thought, but that Marx's use of it has been misinterpreted. "Mediation" is the concept which is central. Hegel viewed mediation as the connection between "is" and "ought" but used only

thought-mediation. Howard traces Marx's intellectual development (primarily through his early years) using mediation as a pivotal concept—from Marx's first encounter with Hegelianism, to his recognition (1843-1844) of the proletariat as the solution to the theory-praxis dialectic, and briefly into his later works. The proletariat is created by objective conditions but becomes a subjective force. Thus the proletariat is the "subject-object" of history, the mediating principle which reconciles the ideal and reality. This insight gives unity and continuity to all of Marx's thought.

HOWELL, Wilbur Samuel. *Logic And Rhetoric In England, 1500-1700.* Princeton NJ Princeton Univ Pr 1956.

The author offers this "chapter in the history of ideas" as a "new interpretation of the theories that governed the production" of the much-studied writings of the Renaissance in England. The two centuries examined span the transition from mediaeval Aristotelianism and Ciceronianism to the Royal Society and the plain style.

HUANG, Siu-Chi. *Lu Hsiang-shan, A Twelfth Century Chinese Idealist Philosopher.* New Haven CT 1944.

Lu Hsiang-shan, a twelfth-century Chinese philosopher, was a Neo-Confucianist who developed a form of monistic idealism which profoundly affected Chinese thought in subsequent centuries and in the twentieth century still has its advocates. The monograph under review is the first attempt in a western language to trace the development of the Lu-Wang school of thought. A major part of the work is devoted to the origins of the school of thought as developed by Lu Hsiang-shan. The writer sharpens the study by comparing Lu Hsiang-shan's doctrines with those of the leading philosopher of the day, Chu Hsi, a dualistic realist.

- HUGHES, H Stuart.** *Consciousness And Society: The Reorientation Of European Social Thought, 1890-1930*. NY Knopf 1958.
- This study is an examination of the theories concerning the nature and method of social theorizing as this is exemplified in the work of such men as Freud, Weber, Croce, Durkheim, Pareto, Bergson, Sorel, Jung, *et al.* The study is limited to the years 1890-1930 when thinkers were re-appraising traditional assumptions concerning the mainsprings of human conduct, when they were questioning the possibility of "objectivity" in social thought, and when they were groping for new foundations on which to erect a valid knowledge of society. The author discusses agreements and disagreements among the ideas of the men studied so as to disclose interrelationships and the common intellectual framework within which they labored.
- HUGHES, H Stuart.** *Oswald Spengler; A Critical Estimate*. NY Scribners 1952.
- The author of this book examines Spengler's work in broad perspective, evaluates the man as historian and diagnostician, and considers such "new Spenglerians" as Toynbee, Kroeber and Sorokin. There is an excellent discussion of the various theories of history and a careful examination of the sources and influences of Spengler's *The Decline of the West*.

- HULL, David L.** *Darwin And 19th Century Philosophies Of Science*. Bloomington Indiana Univ Pr 1972.
- The influence of the writings of Herschel, Whewell and Mill on Darwin's theory of evolution is set out. According to 19th century philosophers of science, Newton's theory of universal gravitation was a genuine scientific theory; Darwin's theory of biological evolution was not. The faults lay with 19th century philosophy of science, not Darwin's theory.
- HULL, David L.** "Darwinism And Historiography" in *The Comparative Reception Of Darwinism*. Austin Univ Of Texas Pr 1974.
- A summary is provided of the dozen or so papers which detail the reception of evolutionary theory throughout the Western world, with special reference to the roles of translations, philosophy and religion, politics and economics, universities and the scientific establishment, as well as reason, argument and evidence.
- HULL, David L** and Buck, Roger. The Logical Structure Of The Linnaean Hierarchy. *Systematic Zoology* 15,97-111 1966.
- Set theory is applied to the taxonomic hierarchy: organisms are individuals, taxa are classes and categories are classes of classes. The only peculiarity is that taxa names are intensionally defined. Otherwise, the practice of monotypic classification produces paradoxes.
- HULL, David L.** Are Species Really Individuals? *Systematic Zoology* 25,174-191 1976.
- I argue that evolutionary theory requires that species (the things which evolve) be construed as spatiotemporally extended and localized individuals. Several important implications follow from this ontological shift. The names of species are best construed as being proper names and species' descriptions as, just that, descriptions. No reference to a particular species can be made in a scientific law. Evolutionary theory does not refer to particular species but to kinds of species.
- HULL, David L.** Central Subjects And Historical Narratives. *Hist Theor* 14,253-274 1975.
- Central subjects are spatiotemporally extended and localized individuals. The roles which such entities play in cosmology, geology, paleontology and human history are explained. In each case, they serve as a focus for an historical narrative, a

description of their continued existence through time. Just as a paleontologist describes the changes which take place as a biological species evolves gradually through time, an historian describes changes which take place in the case of individual people, lineages, nations, societies and the like. One controversial contention is that descriptions of theoretically significant individuals are just explanatory as the subsuming of such individuals under theoretically significant classes.

- HULL, David L.** Certainty And Circularity In Evolutionary Taxonomy. *Evolution* 21,174-189 1967.

Phenetic taxonomists criticize evolutionary taxonomy as being logically circular. The nature of this particular logical fallacy is explained and shown not to be especially applicable to the practices of evolutionary taxonomists. If anything, the appropriate criticism is that their reconstructions are frequently not very warranted.

- HULL, David L.** Consistency And Monophyly. *Systematic Zoology* 13,1-11 1964.

The purpose of biological classification, according to G G Simpson, is to construct a set of indented taxa names consistent with reconstructed phylogeny. I show that the principles of classification which Simpson suggests are too weak to permit much in the way of inferences from a classification to phylogeny. Hence, inconsistency is all but impossible. Subsequently, Willi Hennig has suggested much stronger principles of classification which would permit precise inferences about phylogeny from a classification.

- HULL, David L.** Contemporary Systematic Philosophies. *Ann Rev Ecol Syst* 1,19-54 1970.

Recent work in contemporary systematic philosophies is summarized, including that of the cladists, evolutionists and pheneticists.

- HULL, David L.** Reduction In Genetics—Biology Or Philosophy? *Phil Sci* 39,491-499 1972.

If reduction is interpreted as the derivation of the theory being reduced from the reducing theory, then Mendelian genetics has not been reduced to molecular biology. Difficulties are presented for even the in principle derivation of anything that could legitimately be called Mendelian genetics from molecular biology. Nor is there any progress in this direction discernible in the biological literature. However, Mendelian genetics is being reduced to molecular biology. Hence, the traditional analysis of theory reduction is inappropriate for this example.

- HULL, David L.** Systemic Dynamic Social Theory. *Sociological Quarterly* 11,351-363 1970.

Hugo Engelmann has constructed a social theory using quantum theory as a model. I argue that his theory is empirically vacuous and trades on equivocations to gain the little plausibility it has.

- HULL, David L.** The Operational Imperative—Sense And Nonsense In Operationism. *Systematic Zoology* 17,438-457 1968.

The weaknesses of operationism in physics and psychology are pointed out. Comparable weaknesses in operational criticisms of several biological concepts are then detailed.

- HULL, David L.** What Philosophy Of Biology Is Not. *J Hist Biol* 2,241-268 1969.

Recent work in philosophy of biology is summarized and criticized. The conclusion is that philosophy has had little impact on biology and biology even less impact on philosophy. The major exceptions to this conclusion are the writings of Thomas Goudge and Morton Beckner.

- HULL, David.** *Philosophy Of Biological Science*. Englewood Cliffs NJ Prentice-Hall 1974.

The book is intended as an introductory text for courses in philosophy of science with special reference to those subjects traditionally viewed as the subject matter of philosophy of biology—reduction, teleology and the structure of evolutionary theory.

- HUMPHREYS, Willard C.** *Anomalies And Scientific Theories*. San Francisco Freeman Cooper 1968.

This book combines the logical, epistemological, and historical approaches to science. The author argues that on the basis of the essential role played by anomalies in

- science, the view that physical theories are "rigid axiomatic schemata" is untenable. He studies four cases: Newton's work in optics, Leverrier's discovery of Neptune, the photoelectric effect, and the discovery of the meson, to show the essential role played by anomalies in actual scientific practice. Discussions of scientific explanation, concepts of probability, and interpretations of quantum physics provide succinct summaries as well as the author's criticism of current thought on these topics. He then provides a more refined treatment of these topics based upon the ideas of anomaly, boundary conditions, and approximative inference.

- HUNGERLAND, Isabel C.** *Poetic Discourse.* Berkeley Univ Of Calif Pr 1958.
- Poetic discourse is conceived here in a broad sense. It is absurd "to define poetic discourse in terms of the predominance of some special kind of meaning." Poetic language is illimitable. The study treats poetry within the broader framework of art and literature in general. References to novels, stories, and plays as well as numerous examinations of poems or lines from poems are included. Some reference to the psychoanalytic theory of art, both Freudian and Jungian, is made. The author discusses problems of poetry and truth, the appraisal of literary works, and the interpretation of poetry. Chapters on figurative language and symbols in poetry are included. It is possible, the author argues, to comprehend and evaluate poetic discourse in an "objective" way, though qualifications are needed to unquote the key word. Thus, the emphasis is on the poem rather than the poet and on meaning rather than response. An overall theory of art or of poetry is neither sought for nor projected.

- The article analyzes two propositions: (1) A man who knows of at least one case of an x being a y, and who does not know of any positive reason for thinking that an x might not be a y, has some reason for thinking that all x's are y's, and the contradictory proposition, (2) A man who knows of at least one case of an x being a y and does not know of any positive reason for thinking that an x might not be a y has no reason at all for thinking that all x's are y's. The author argues that (2) is absurd in virtue of the meaning of what is said—absurd in virtue of the concepts employed being what they are.

- HUNTLEY, Martin.** Presupposition And Implicature. *Semantikos* 1,67-88 1976.
- The distinction between presupposing something and implicating it is explored in light of the idea that speakers' presuppositions are preconditions of their saying what they say. It is acknowledged that what is on occasion presupposed by a speaker may also on occasion be implicated by him, but it is also argued that a speaker cannot on one and the same occasion be both presupposing and implicating the same thing relative to the same audience. Further, it is argued that what a speaker is presupposing, unlike what he is implicating, is no part of what he means. The net effect of this is to give some motivation for treating presupposition as a pragmatic, and not a semantic, notion.

- HURLBUTT, R H.** David Hume And Scientific Theism. *J Hist Ideas* 17,486-497 O 56.
- The thesis is that the main object of Hume's *Dialogues Concerning Natural Religion* is not only to refute the traditional design argument for the existence of God, but also to refute attempts of Isaac Newton and others to exploit science in their formulations of it. This claim is supported by comparisons of formulations of the argument in the *Dialogues* with those of two Newtonians, Colin Maclaurin, and George Cheyne. They are shown to match. The article provides new interpretations of Hume's arguments, and increased understanding of the interrelations of science, philosophy, and theology in the Eighteenth-Century.
- HURLBUTT, Robert H.** *Hume, Newton, And The Design Argument.* Lincoln 1965.
- The book is a historical and philosophical analysis of the design argument for the existence of God. The first part shows how Isaac Newton and others (Boyle, Locke, Butler, the Deists) used science in support of the argument. The second traces the argument from its ancient to its early modern formulations—Plato, Aquinas, Galileo

(among others). The third argues, first, that the main object of Hume's *Dialogues Concerning Natural Religion* was to refute Newtonian attempts to exploit the methods and contents of early modern science for theological purposes. It argues, further, that Hume's refutation of the design argument is conclusive.

HURLBUTT, Robert H. "A Philosopher's View" in *Man's Quest For Security*, E J Faulkner (ed). Lincoln 1966.

The article claims that many paradoxes concerning security relate to the belief, held mainly by Existentialists, that men are secure only in the total absence of problems. Security, for personas and groups, comes, so to speak, with an "empty problem-box." It is argued that this concept suffers from at least two incoherencies. First, it makes security logically impossible, since such a total absence cannot obtain. Second, the inclusion in the box of radically different problems—instances would be death, war, pneumonia—leads to category mistakes. In either case the concept of security is emptied of empirical content. One cannot secularize heaven.

HURLBUTT, Robert H. "Berkeley's Theology" in *George Berkeley*. Berkeley Univ Of Calif 1957.

The article analyzes the logical and epistemological features of George Berkeley's arguments for the existence and attributes of God. The arguments are shown to be versions of the design argument, whose logical form is analogical, and thus to reflect a theological position similar to the design theology common to eighteenth-century English philosophy. His theory does, however, have some unusual features. For instance there is an apparent influence from the Thomistic doctrine of "proportionate" analogy. The article argues that confusions over the *a priori* or *a posteriori* character of the reasoning, and over its demonstrative, certain, or probable force, lead Berkeley into inconsistency.

HUTCHINGS, Patrick Ae. What Does "Good" Tell Me? *Ethics* 76,47–52 O 65.

Philosophical theories have practical consequences and the practical consequences can provide a *reductio ad absurdum* of the theories. C L Stevenson's emotivism, applied to educational practices, for example, may lead to authoritarianism. What is unsatisfactory about emotivism thus appears in practice as its failure to account for why we must provide reasons for whatever moral position we take.

HUTCHINGS, Patrick. *Kant On Absolute Value*. Detroit Wayne State Univ 1972.

HUTCHINS, Robert M And Others. *Natural Law And Modern Society*. NY World 1962.

This is a collection of papers contributed by their authors at the invitation of the Center for the Study of Democratic Institutions at Santa Barbara, California, and under the auspices of the Fund for the Republic. The contributors set out to examine selected facets of contemporary institutions as related to the concept of natural law. J Cogley provides an "Introduction" to the general theme by way of placing the notion of natural law in historical and critical perspective.

HUTCHINS, Robert M. *Education For Freedom*. Baton Rouge 1943.

In this book Hutchins states his by now familiar thesis that American education has become ineffectual and irrelevant to the needs of a democratic citizenry. He lashes out at the skepticism, presentism, and scientism with which he feels American educators are preoccupied. He attacks the "academic potentates" for their anti-intellectualism and sees salvation in a return to the sages, and in a rigorous thinking out of contemporary life with constant reference to the classic experience.

HUTTEN, Ernest H. *The Language Of Modern Physics: An Introduction To The Philosophy Of Science*. NY Macmillan 1956.

This book gives a semantic analysis of the main concepts of classical and quantum physics. The author holds that the task of philosophy of science is to explicate the meanings of scientific theories, laws, and hypotheses by formal reconstruction; semantic rules are a necessary part of such a reconstruction. Beginning with a simplified treatment of the required concepts of logical syntax and semantics, he proceeds to discuss in non-technical language the concepts of the chief physical theories, and concludes with a description of the methodology of theory construction and confirmation. His only unusual thesis is that, contrary to what physicists tell us, models still essentially underlie all physical theories and constitute the link between theory and experiment on which must be based the semantic rules needed to supplement attempts at formal reconstruction.

HUXLEY, Julian. *The Human Crisis*. Seattle Univ Of Wash Pr 1963.

Two lectures, on "The Humanist Revolution" and "The World Population Problem" are presented in this volume. By the term "humanist revolution," the author means the coming upsurge in evolutionary and humanist thoughts and attitudes which will result from "the knowledge explosion" of the 100 years since Darwin's *Origin of Species*. This Knowledge explosion includes glimpses of the prehistory of Crete, our discoveries in genetics and biological evolution, our new view of the atom, and the findings of psychology and psychiatry. On the world population problem, Huxley contends that although the Occident is richer in knowledge of and research on birth control, the Orient is ahead in accepting the desirability of limiting the world's population.

ICHHEISER, Gustav. Social Perception And Moral Judgment. *Phil Phenomenol Res* 26,546–560 Je 66.

Whatever, in abstract, the relationship between "values" and "facts," it is indubitable that *concrete* moral judgments are based on facts as they are presented to us by our social perception. The so-called moral judgments, therefore, are a compound, the duality of which is confused by their evaluative aspects being often explicit, while the underlying factual assertions (or assumptions) are only implicit. Hence many *seemingly* moral disagreements are actually not moral but factual in their nature. We disagree with each other about seemingly moral issues because we perceive the underlying facts in different ways.

IHDE, Don. *Listening And Voice: A Phenomenology Of Sound*. Athens Ohio Univ Pr 1976.

Listening And Voice is the first systematic phenomenology of the experience of sound. After an introduction to phenomenology and its main methods there follows a

descriptive analysis of the main features of the human experience of listening. In the second half of the book implications of the analysis are traced out with respect to the human voice and our self-understanding. Topics include human communication, dramaturgy in liturgy, drama and poetry, and the role of auditory imagination with special regard to inner speech.

IHLDE, Don. *Hermeneutic Phenomenology.* Evanston IL 1971.

The major thesis of this first complete study of the works of Paul Ricoeur through 1969 concentrates upon the development of a hermeneutic phenomenology. It shows that the question of language is at first latently, and then more explicitly important in this development. A hermeneutic phenomenology moves the central concern of phenomenology from a perceptualist to a linguistic base with a number of consequences indicated in the text. In the process of this critical exposition and thesis, the book seeks to portray the major methods and habits of thought displayed by Ricoeur.

INGARDEN, Roman. A Marginal Commentary On Aristotle's *Poetics.* *J Aes Art Crit* 20,163-174 Wint 61.

INGARDEN, Roman. A Marginal Commentary On Aristotle's *Poetics.* *J Aes Art Crit* 20,273-286 Spr 62.

INGARDEN, Roman. Aesthetic Experience And Aesthetic Object. *Phil Phenomenol Res* 21,289-313 Mr 61.

The purpose here is to give a thorough phenomenological account of the aesthetic experience. The difference between cognitive perception of a real object and the aesthetic experience of an esthetic object is discussed at length. Elements and phases of an esthetic experience are delineated; illustrations of a preliminary emotion of esthetic experience are given, all of which suggest a fundamental change of attitude. From normal perceiving to esthetic perceiving there is a change from categorical structures to qualitative harmony structures, producing pleasure in the presence of an esthetic object.

INGARDEN, Roman. The General Question Of The Essence Of Form And Content. *J Phil* 57,222-233 Mr 60.

The author distinguishes several meanings of "form" and "content" and, where possible, makes these meanings more precise. For his own purposes, he retains the terms "form" and "content" for only two sets of meanings and designates the remaining ones with other expressions.

INGARDEN, Roman. The Hypothetical Proposition. *Phil Phenomenol Res* 18,435-449 Je 58.

INGE, William Ralph. *Mysticism In Religion.* Chicago Univ Of Chicago Pr 1948.

Inge gives a broad, brief survey of the philosophic controversies ranging about the terms time, space, value, symbol, sign and myth insofar as they have any bearing upon the personality of God or the Absolute and the mystic's recognition of man's avenues to the ineffable.

INGERSOLL, David E. Karl Llewellyn, American Legal Realism, And Contemporary Legal Behaviorism. *Ethics* 76,253-266 Jl 66.

Contemporary "radicals" in legal scholarship are "intellectual progeny" of the legal realists of the thirties, a movement wrongly assumed to be dead and ignored. Kurt Llewellyn, a "rule skeptic," also deserves more attention as holding a central position in a movement in which Jerome Frank, a "fact skeptic" typically regarded as a representative legal realist, is really a left-winger. Realists split over why the doctrine of precedent was insufficient, with Llewellyn's group believing that "real" rules can be discerned behind the "paper rules" of written law and thus that accurate prediction of future judicial behavior is possible. Realism cannot be viewed as a movement to "destroy continuity and regularity in the analysis of law."

ISEMINGER, Gary. *An Introduction To Deductive Logic.* NY 1968.

This is a text for a first course in deductive logic. The book does not contain sections of exercises, although many questions are included in the text. The author states that the book is intended as a basis for elaboration and explanation by an instructor, rather than being entirely self-sufficient. The main portion of the book is devoted to symbolic logic, although there is a long appendix which discusses categorical propositions. As well as presenting propositional calculus by means of a system of natural deduction, the book contains chapters on the difference between an axiomatic system and a system of natural deduction, on metatheory, and on propositional modal logic.

ISENBERG, Arnold. *Aesthetics And The Theory Of Criticism: Selected Essays Of Arnold Isenberg,* William Collaghan and others (eds). Chicago Univ Of Chicago Pr 1973.

ISENBERG, Arnold. Critical Communication. *Phil Rev* 58,330-344 Jl 49.

In respect to explaining his evaluation of a work of art, the function of the critic is to get an audience to see in the work what he sees. After achieving this sameness of vision, the audience may share the critic's evaluation of the work. To the extent that this occurs, the critic's "reasons" justify his verdict. However, the relationship between the critic's "reasons" and his verdicts is neither logical nor psychological. The critic's remarks are not to be interpreted as a psychological explanation of his liking a work. Neither are his verdicts deducible from stated or implied norms.

ISENBERG, Arnold. Deontology And The Ethics Of Lying. *Phil Phenomenol Res* 24,463-480 Je 64.

A deontological theory must discover the moral significance of lying among the internal components of the act of lying. But the difference in moral significance accorded to various lies cannot be accounted for on the basis of internal components. Those components do establish a slight inherent disvalue of lying. On the other hand, consequences constitute the basis of differences in moral significance of various lies; but without reference to the act itself, moral significance is not attributable.

ISENBERG, Arnold. Natural Pride And Natural Shame. *Phil Phenomenol Res* 10,1-24 S 49.

Pride is the reflection upon the possession of a quality. There is no ethical distinction between pride in gifts and pride in accomplishments, since accomplishments are

- ultimately the result of gifts. Reasonable pride is proportionate to the value of the quality and not to the source of the quality. Pride reinforces the incentive to accomplish and is consistent with humility. "Shame is the feeling that comes with the consciousness of faults...." Shame concentrates on the past and is not compatible with corrective action. Shame of natural disadvantage is evil and not to be tolerated.
- ISENBERG, Arnold.** On Defining Metaphor. *J Phil* 60,609-621 O 63.
Metaphor is defined as "a transference of a word or phrase normally applied to one thing to a different but analogous object as to register upon the aesthetic sense and evoke some response, positive or negative." Difficulties with "resemblance in difference" and "unity in variety" as explanations of metaphor are discussed. Although the use of these terms in explaining metaphor lacks precision, some comparable notion is required. That "metaphor" is an approbative term applicable only to fine art is concluded from examples and from the authority of Croce and Dewey.
- ISENBERG, Arnold.** Perception, Meaning, And The Subject-Matter Of Art. *J Phil* 41,561-575 O 44.
"An all but complete analysis of 'subject matter' can be given by a *presentational* aesthetic." The notion of subject matter results from the description of certain aesthetic forms. Some of the forms which compose art objects bear resemblances to natural objects. In the absence of purely sensory terms, physical terms (the language of subject matter) are used to describe such forms. Used in this way, physical terms refer to only the forms designated. Aesthetic values are determined by forms themselves and not by the objects to which those forms bear a resemblance.
- ISENBERG, Arnold.** Perishable Art. *J Aes Art Crit* 4,217-229 Je 46.
- ISENBERG, Arnold.** The Esthetic Function Of Language. *J Phil* 46,5-19 Ja 49.
Since aesthetic objects must be directly perceivable and contemplable, they must be purely sensuous. But language is not purely sensuous. Consequently, it appears a paradox that poetry, drama, and fiction are regarded as fine arts. Isenberg's solution is to show that language is capable of non-referential meaning and that understanding language is independent of belief. The aesthetic function of language is to convey to the reader or listener situations which are directly contemplated without further reference. This fact has often been obscured by reliance upon a visual model of contemplation.
- ISENBERG, Arnold.** The Problem Of Belief. *J Aes Art Crit* 13,395-407 Mr 55.
Responses to poetry or prose may be influenced by the impingement of assertions of the work upon one's beliefs. The problem of belief is whether or not such beliefs are relevant and legitimate concerns of aesthetic appreciation and evaluation. Isenberg defends the position that "belief and aesthetic experience are mutually irrelevant." Ideas have values other than truth values and the treatment of a line in a poem as an aesthetic object implies a disregard of its truth value. The arousal of beliefs by a work is a distraction of attention away from aesthetic values.
- ISENBERG, Arnold.** The Technical Factor In Art. *J Phil* 43,5-18 Ja 46.
Isenberg argues that the role of technique in art is constitutive and not merely ancillary. His argument is set against Croce's view that the physical manifestation of a work of art is an externalization of a work already completed in the intuition. Isenberg maintains that practice of technique provides the artist a beforehand knowledge of the possibilities of a particular medium and that such knowledge is necessary for the completion of the idea of a work of art. Production in the physical medium is the final stage in the self-development of aesthetic purpose.

- ITZKOFF, Seymour W.** *Ernst Cassirer: Scientific Knowledge And The Concept Of Man*. Notre Dame Notre Dame Univ Pr 1971.
This work is an analysis of the unity of Cassirer's thought and an assessment of some of the implications of Cassirer's philosophy of man and scientific knowledge. Although Cassirer has as far proved to be of limited significance for twentieth century philosophy the author argues that the bankruptcy of logical positivism has led to a position of man as symbolic animal which is close to that offered by Cassirer in *Substance and Function* and later generalized in the *Philosophy of Symbolic Forms*. Much of the work is historical and tries to trace the intellectual tradition from which Cassirer emerged, as Cassirer saw it. The author argues that Cassirer's bias was anti-metaphysical and that his epistemological views are in "the main line of contemporary thought."
- IVES, Margaret C.** *The Analogue Of Harmony: Some Reflections On Schiller's Philosophical Essays*. Pittsburgh Duquesne Univ Pr 1970.
This analysis of the concept of the harmonious personality in Schiller's philosophical essays contributes to our understanding of the great impact of Greek thought, as conceived in German literature, upon some patterns of the 18th and 19th-century theories of personality. M C Ives discusses the main contributions of German critics to the understanding of Schiller's concept of harmony.
- IVIE, Stanley D.** Jose Vasconcelos And Hispanic-American Education. *J Thought* 2,18-23 Ja 67.

- IVINS JR, William M.** *Art And Geometry, A Study In Space Intuitions*. Cambridge Harvard Univ Pr 1946.
A famous English poet once wrote a poem eulogizing a Grecian Urn. What Ivins would have us believe is that the urn did not really deserve the eulogy. In his view Greek art and culture have been vastly overrated. The figures of Greek sculpture are "abstract ideological conformations devoid of physical, mental, or spiritual histories." Not only did the Greeks lack the ability to depict the psychic tensions of personality, but also their deficient geometry made them unaware of perspective. Fortunately the discoveries of Alberti and Desargues have led to the perspective of central projection and section, and nonmetrical geometry, thus helping Western Europe to free itself of the inhibiting burden of the Greek tradition. This work offers an informative history of the development of mathematical perspective and projective geometry.

- JACK, Henry.** More On Prima Facie Duties. *J Phil* 63,521-523 S 66.
In this reply to Robert Shope three points are made: (1) that the interpretation of *prima facie*/actual duties in terms of good moral reasons/conclusive reasons is not new; (2) while Shope's term "moral demand" confuses Ross' *prima facie*/actual obligation distinction, nevertheless Shope is correct in saying that Ross is ambiguous (contrary to a previous criticism by Baumrind), and the present author favors the line that *prima facie* obligations are real obligations which continue to exist even when over-ridden; (3) that the notion of "exception to a *prima facie* duty" seems to be either senseless or artificial which poses a somewhat different problem about "exceptions" than the one Shope claimed to find in Ross.
- JACK, Henry.** On The Analysis Of Promises. *J Phil* 55,597-603 Jl 58.
- JACK, Henry.** Reply To Barker's Criticism Of Formalism. *Phil Sci* 26,355-361 O 59.
- JACKENDOFF, Ray.** On Belief-Contexts. *Linguistic Inquiry* 6,53-93 1975.
The property of referential opacity found in sentences about beliefs is studied as a collection of grammatical phenomena. The same grammatical phenomena are found in sentences describing pictures. A semantic analysis is given for picture-sentences which postulates a new sort of entity, the image within the picture. This analysis is then extended to belief-sentences, where the appropriate new entity is a mental image. It is shown that the formalism given for dealing with images solves the traditional problems of referential opacity rigorously, and that it is a major improvement on previous analyses.
- JACKENDOFF, Ray.** Toward An Explanatory Semantic Representation. *Linguistic Inquiry* 7,89-150 1976.
A formal analysis of traditional semantic notions such as Agent, Recipient, etc. in terms of the theory of thematic relations. In this theory, the analyses of abstract semantic fields of verbs are assimilated to the analysis of verbs of spatial location and motion. Inference rules are defined that correspond to fundamental spatial principles; the theory correctly predicts that these rules can be extended to a broad range of inferences in many more abstract domains. Finally, it is shown that the proposed semantic representations have some degree of psychological reality.

Both Buddhism and Whitehead find the foundations of the world in aesthetic experience, rather than, as with Kant and almost all Western philosophers, in the cognitive or conceptive experience. The ultimate aim of life, according to Buddhism and Whitehead, is found in the passing moment in the awakening of the live creature to more of the flow of quality in the fullness of existence. Reason finds its function in freeing life from its compulsions and fixations, vivifying original centers of experience where men and women in the passing moment are deeply, joyfully, and memorably alive.
- JACOBSON, Nolan Pliny.** "The Problem Of Civilization" in *Social Change*, John Eric Nordskog (ed). NY McGraw-Hill 1960.
Along with an essay by Arnold J Toynbee, "Civilization on Trial," this essay constitutes the final section of the book. Civilization is conceived as a process, seven aspects of which are described: (1) growth of the sensitivities of individual men and women, (2) maturing of these new sensitivities through practical expression, (3) growing effectiveness of individuals as sources of social change, (4) broadening diffusion, interweaving, and communication of each individual's responses with the thought and action of others, (5) increasing interdependence between everyone so involved, (6) increasing assimilation of non-human nature, and (7) widening range of awareness in an increasingly human world.
- JACOBSON, Nolan Pliny.** "The Unbalanced Revolution" in *Science And Society: Past, Present And Future*, Nicholas H Steneck (ed). Ann Arbor 1975.
Offered in a symposium at Ann Arbor on the occasion of the 500th anniversary of Copernicus, the paper describes the conditions which have joined scientific research and development to the interests of what Eisenhower called "the military-industrial complex" and attempts to identify powerful tendencies of an interdependent global community to reconceive science as self-corrective inquiry operating across the total spectrum of human concerns. Science in this new perspective operates in a new

dominant social paradigm, carrying the human adventure to new horizons of development and freeing inquiry from all predetermined goals.

JACOBSON, Nolan Pliny. Marxism And Religious Naturalism. *Journal Of Religion* 39,95-113 Ap 49.

The essay endeavors to show that the actual writings of Marx are not inconsistent with a philosophy of religious naturalism originating in Process Philosophers such as Whitehead, Dewey, Wieman and Charles Hartshorne. The center of Marx's thought is the process of human labor which transforms both man and his social and natural matrix of life. As this practical-critical activity comes to grips with a world structured by previous labor, individuals develop their powers progressively to perceive and transform both themselves and the rest of nature. Civilization always depends for its continuation upon penetrating existing forms of social existence.

JACOBSON, Nolan Pliny. The Faith Of John Dewey. *Journal Of Religion* 40,190-198 Jl 60.

Originally presented at the Dewey Centennial at Columbia University in 1959, the essay examines all available writings by Dewey on the nature of religious faith, concluding that his remarks concerning the surpassing wonder of communication and the "standing mystery" of the union of the ideal with the real are firmly rooted in Dewey's total orientation to life. Personal letters written to the author clearly show Dewey's philosophical shift from the "Humanist Manifesto" of earlier days, and specifically from the cultural provincialism in which he lived and wrote prior to his two-year visit to China and Japan. After that trip, as Jane Dewey observed, "everything appeared different."

JACOBSON, Nolan Pliny. The Uses Of Reason In Religion: A Note On David Hume. *Journal Of Religion* 39,102-110 Ap 59.

The essay is the eventual outcome of papers presented to professional societies showing that Hume was much more than a philosophical skeptic. When Hume shows that life cannot adequately be either understood or lived on the intellectual level, he is expressing his own life experience. Intellect is rooted in feeling. Concepts may have their origin, not merely in what he called (with great philosophic originality) "custom," but also in the ulcerated colon which may well have undermined his health. Concepts originate in social communication, the heart of which Hume thought of as "sympathy." Readers of Hume are prone to overlook this sublingual level of his thought.

JAEGER, Werner. Early Christianity And Greek Paideia. Cambridge MA Belknap Pr 1961.

The concluding work by the most philosophical of twentieth century classical scholars. In this volume, Jaeger stresses the adaptation of Christianity to that pervasive classical culture which he earlier called *paideia*, and shows that it was by this adaptation that Christianity was able to change from a local offshoot of Judaism into a universal religion and a world force. But adaptation is two-sided: in this process *paideia* changed from a secular education relying upon the Olympian religion into a process of spiritual growth embracing this world and the next. The book is written in the form of public lectures, with notes.

JAEGER, Werner. Humanism And Theology. Milwaukee Marquette Univ Pr 1943.

The author deals here with the more general historical problem of the theocentric view of the world represented by St Thomas and its relationship to the Greek ideal of culture and the classical tradition, which is the foundation of all humanism.

JAEGER, Werner. Diocles Of Carystus: A New Pupil Of Aristotle. *Phil Rev* 49,393-414 Jl 40.

JAFFA, Harry V. Thomism And Aristotelianism; A Study Of The Commentary By Thomas Aquinas On The Nicomachean Ethics. Chicago Univ Of Chicago Pr 1952.

JAGER, Bernd. The Three Dreams Of Descartes. *Rev Exist Psychol Psychiat* 8 1968. A phenomenological exploration of the famous three sequential dreams which, by Descartes own estimation, had a profound effect upon his life and thought. The main themes of the dream are placed within the context of Cartesian thought. This seen, dream-life and intellectual life show themselves to be thoroughly intertwined.

JAGER, Ronald. The Development Of Bertrand Russell's Philosophy. NY Humanities Pr 1972.

The various stages in the development of Russell's thought, which the author seeks to survey comprehensively and critically, are seen as falling into three main phases:

realism, atomism, and neutral monism. The discussion of his early realist metaphysics centers around the doctrines Russell embraced concerning being and existence, external relations, contingent and necessary properties, and propositions and truth. Russell's views on the nature of logic and mathematics are expounded, along with the technical notions involved in his contribution to formal logic. The philosophy of logical atomism is then considered under two headings: "Theories of Language" and "Theories of Knowledge." In the first the author discusses the Theory of Descriptions and allied topics relating to reference and existence; in the second he deals with acquaintance, particulars and universals, sense-data and logical constructions. The chapters devoted to neutral monism treat of Russell's theories of mind and matter and his conceptions of the public and the private world.

JAGER, Ronald. Realism And Necessity. *Rev Metaph* 18,711-738 Je 65.

The author argues that two mutually incompatible and individually indefensible interpretations of Henry Veatch's account of necessity are possible and that Veatch claims the advantages of both and the liabilities of neither. On the first interpretation, the truth-necessity of a metaphysical proposition has its "warrant" in its own analyticity and its "source" in the nature of the subject; no difference is affirmed between the bases of truth and necessity. On the second interpretation, metaphysical propositions are, if true, necessary. The author critically examines each position and closes with remarks on Veatch's notion of "aboutness."

JAKI, Stanley L. Brain, Mind And Computers. NY Herder & Herder 1969.

JAKI, Stanley L. The Role Of Faith In Physics. *Zygon* 2,187-202 Je 67.

JAKI, Stanley. The Relevance Of Physics. Chicago Univ Of Chicago Pr 1966.

The author examines the methods and achievements of physics in an historical perspective in order to show that one must be wary of claims that physics or any branch of science has reached a "final truth." The first section traces the history of organicism, mechanism and the use of mathematical models from the Greeks to the present, showing errors and limitations in these programs. It is then argued that the reduction of biology to physics is yet but a program with no assurance or even reasonable expectation of success, since the basic fact of life is hardly a subject for physics. The author shows that metaphysics, ethics and theology are distinct from physics, that the former cannot be reduced to or explained in terms of the latter, and that scientists cannot do without belief in some metaphysical principles (e.g., symmetry uniformity). The concluding sections trace the history of scientism, exposing the errors and misconceptions of this overenthusiastic view of science.

JAKOBSON, Roman (ed). Structure Of Language And Its Mathematical Aspects. Providence RI Amer Math Soc 1961.

The list of contributions reads like a Who's Who in Linguistics and the articles though technical indicate that these are people who know how to use language as well as write about it.

JAMESON, Frederic. Sartre: The Origins Of A Style. New Haven Yale Univ Pr 1961.

This essay is a hermeneutics of style in which language is examined in terms of its intentional structure and the implications of its philosophic texture. The focus is upon Sartre's deployment of style for special purposes as well as upon the ways in which the phenomena of his words implicitly intend ways of being and non-being. The analysis is developed in intimate connection with illustrations from Sartre's novels, plays, and stories. Ontological categories are utilized to explore the themes of "event," "things," and "human reality" as they achieve placement in Sartre's "style."

JAMMER, Max. Concepts Of Force: A Study In The Foundations Of Dynamics. Cambridge Harvard Univ Pr 1957.

This historical and critical study of the concept of force is intended to clarify its use in modern physics, and to overcome the specialized viewpoint involved in the study of such things as exchange forces or noncentral tensor forces. The twelve chapters of the book begin with the foundations in ancient science of an animistic and spiritual reality, in which the central concept of an impetus is surrounded by a multitude of extrascientific connotations. The book concludes by showing how the use of force in quantum mechanics and general relativity illustrates the modern trend toward eliminating the notion from the conceptual scheme of physical theory.

JAMMER, Max. Concepts Of Mass In Classical And Modern Physics. Cambridge Harvard Univ Pr 1961.

JAMMER, Max. *Concepts Of Space: The History Of Theories Of Space In Physics.* Cambridge Harvard Univ Pr 1954.

This book is a thorough and well-documented study of the major revolutions in the concept of space from Pythagoras to Einstein. The theories of the ancient atomists, of Plato, and of Aristotle regarding space are analyzed against the background of modern considerations concerning homogeneity, isotropy, continuity, and infinity. The part played by theology in the development of the concept of space, the controversy attending the Newtonian and Leibnizian developments of absolute and relative theories of space, and, finally, the role of geometry as developed by Gauss, Riemann, and Clifford in the physics of Eddington, Einstein, and Weyl are carefully elucidated.

JARVIS, Judith. *Ethics And Ethics And The Moral Life.* *J Phil* 58,65-82 F 61.

The author takes Bernard Mayo's *Ethics and the Moral Life* as illustrative of two harmful tendencies in ethical writing. First, there is the tendency to suppose that philosophical puzzles are the central issues in moral philosophy. Against this tendency, the author argues that to find the solution to a puzzle—such as whether the fundamental role of moral evaluation is the influencing of decisions or choices—is a matter of no direct importance; it has no direct bearing on the problems of moral philosophy. Second, there is the tendency to treat too casually the similarities and differences between fact-stating and moral discourse.

JARVIS, Judith. *In Defense Of Moral Absolutes.* *J Phil* 55,1043-1053 N 58.

JARVIS, Judith. *Professor Stenius On The Tractatus.* *J Phil* 58,584-596 S 61.

In a critique of Wittgenstein's *Tractatus* by Erik Stenius, the author argues both that Stenius misinterprets Wittgenstein's picture theory of language and that the picture theory, taken by itself, is very thin. She takes Stenius to task for his contention that Wittgenstein means by "objects" not only simple things but also properties (relational and nonrelational), submitting that this would make the picture theory incoherent. She also argues, against Stenius, that there is no way of regarding a compound sentence as a picture or transforming one into a picture. As for Wittgenstein's picture theory itself, she explores the case of subject-predicate sentences whose subjects fail to refer to show that the picture theory encourages a too narrowly restricted conception of the nature of logical relations.

JAYNE, Sears. *John Colet And Marsilio Ficino.* NY Oxford Univ Pr 1963.

JEANS, James. *Physics And Philosophy.* NY Macmillan 1943.

Sir James Jeans' latest popular work seeks to discuss and explore the "borderland territory between physics and philosophy." After attempting to describe the nature of physics and philosophy, he turns to the domain of epistemology with special emphasis upon the views of Kant and Eddington. There is provided a clear,

qualitative explanation of physics, from Newton to Einstein, and from Planck to Dirac. The concluding chapter, on certain problems of philosophy, presents Jeans' own thesis that Occam's "method of simplicity" puts us in close touch with the character of nature, in that the simplest natural law must be the true law—that our simplest conceptions are in harmony with nature because nature is inherently simple and economical.

JEFFERSON, Howard B. *Experience And The Christian Faith.* NY Abingdon-cokes Pr 1942.

This book argues the need of "a distinctively Christian social philosophy." The first chapter analyses the conflict, in education and religion, between modernistic experimentalism and Christian traditionalism. In the view of experimentalism, some religion has failed in intellectual humility and by its absolutizing "has frequently impeded intelligent reform." The author's constructive solution is to preserve the sound elements in both scientific pragmatism and historic Christianity and blend them into "a synthetic theological method" which may reveal to the world the nature of the salvation it needs. In seven chapters this solution is translated, through historical analysis, into his double method's blended meanings in seven problems: knowledge, revelation, modernism, God and nature, God and evil, God and value, and social philosophy.

JEFFERSON, Howard B. *Experience And The Christian Faith.* NY Abingdon-cokes Pr 1942.

JEFFREY, Richard C. *The Logic Of Decision.* NY McGraw-Hill 1965.

The author's theory bears some resemblances to that sketched by Ramsey, but it draws somewhat on the later work of Von Neumann and Morgenstern. The author examines probability as viewed both statically—when the agent's attitudes are constant—and dynamically—when desirability and, consequently, probability assignments change.

JEFFREY, Richard C. *A Note On Finch's "An Explication Of Counterfactuals By Probability Theory."* *Phil Phenomenal Res* 20,116 S 59.

JEFFREY, Richard Carl. *Formal Logic: Its Scope And Limits.* NY McGraw-Hill 1967.

JEFFREY, Richard C. *Ethics And The Logic Of Decision.* *J Phil* 62,528-538 O 65.

A Bayesian model of deliberation is proposed as a more adequate substitute for the basically deductive accounts of decision-making commonly employed in moral philosophy. In the Bayesian framework, knowledge of the agent's preference ranking of propositions is equivalent to knowledge of the numerical probabilities and desirabilities he attributes to those propositions. A thesis of *radical optimism* is discussed, according to which for humans, a Bayesian preference ranking would necessarily be a morally acceptable one—coherence being in fact an ideal never fully attained and only roughly approximated when the propositions in the agent's preference ranking are numerous and various. According to the thesis, we are so constituted that the process of eliminating incoherencies from our preference rankings yields new preference rankings for which the corresponding probability and desirability functions are, respectively, reasonable and moral. "To discuss benevolence or malevolence, one must be able to make sense of the notion of one man's comparing another's desirability function with his own." Two suggestions are made toward this end.

JEFFREY, Richard C. *Goodman's Query.* *J Phil* 63,281-288 My 66.

"In their constructive work on confirmation theory... Carnap and Goodman take radically different approaches." "In the raw form that it takes in the *Query*, (Goodman's) position seems to be that in induction we select some property of observed objects and attribute it to unobserved objects in such a way that the hypothesis must say about the future all and only what the evidence says about the past. The key problem is to select a projectible property which the evidence will attribute to observed individuals and which the hypothesis will then attribute to unobserved individuals; and if this problem is to be solvable, it is important to exclude irrelevant truths from the evidence, where a truth counts as irrelevant if it attributes to an observed individual some property other than the one that is to be projected."

JEFFREY, Richard C. On Indeterminate Conditionals. *Phil Stud* 14,37-42 1963.

The article goes into the logical status of conditionals in which the antecedent if false. Specifically, the author is concerned with whether such indeterminate conditionals are assertable. He holds that there is content to such statements, referring for support to the case of promises, arguing that in such a case we have a serious interest in knowing the meaning of the consequent of the conditional of which the antecedent is false.

JEFFRIES, Christie. Metaphor In *Sons And Lovers*. *Personalist* 29,287-292 Sum-JI 48.

JENKINS, Daniel T. *The Scope Of Theology*. Cleveland World 1965.

This is an introduction to the study of theology. Theology is defined by Jenkins as "systematic discourse concerning God and His ways." Theology arises as a consequence of "a specific religious experience which appears in a particular context." For the Christian, both the experience and the context are related to the historic Christian church, especially to that faith (within the Church) which claims that Jesus Christ reveals the truth about God. The study of theology necessarily involves a considerable number of disciplines, or subdivisions under the discipline of theology. For this reason, the student must investigate carefully the Bible, Church History, Systematic or Dogmatic Theology, Theological Ethics, the relationship between Theology and Philosophy, the Natural Sciences, the Social Sciences, the Arts, Education, and finally the Religions of the World. Each of these disciplines (or subdivisions of Theology) is dealt with by noted scholars; for example James Barr in Old Testament, Ninian Smart in Other Religions.

JENKINS, Iredell. *Art And Human Enterprise*. Cambridge Harvard Univ Pr 1958.

This book presents the thesis that "art exists for life's sake and that life could not exist without art." Arguments against the adequacy of a theory of aesthetics as such are based upon the need for a theory of art as a fundamental human activity. Human beings naturally organize their world of making in terms of 1) technology, which orders man's environment in accord with values; 2) art, which seeks to create the individual and the unique; 3) theory, which seeks to explain. The author's aim is to account for the relationship of art to the other human activities of science, religion, morality, and the establishment of a meaningful cultural tradition.

JENKINS, Iredell. Logical Positivism, Critical Idealism, And The Concept Of Man. *J Phil* 47,677-694 N 50.

The author examines certain assumptions, involving the character of man, which are made by the schools of logical positivism and critical idealism. He feels those schools conceive of man as independent of, unconditioned by, and unconnected with, the environment. These assumptions differ considerably with what the author considers to be the firmly grounded hypothesis of the empirical sciences of man; man is a being who is dependent upon and conditioned by the total environment in which he lives.

JERPAGNON, Lucien. Repentance. *Phil Today* 3,176-182 Fall 59.

JESSUP, Bertram Emil. *Relational Value Meanings*. Eugene Univ Of Oregon 1943.

The writer's main thesis is that primary or ultimate value is defined in the relational situation of valuing. The major portion of the text is devoted to a detailed, acute analysis of propositions to determine the various possibilities as to the locus of value within the relational situation. As against G E Moore and Nicolai Hartmann, the author argues that for an object to be valuable means ultimately that it is capable of being valued, but not that it has any value-qualities antecedent to being valued by a given subject. Taken as a whole *Relational Value Meanings* is a study which clarifies and systematizes some of the basic issues in contemporary epistemological and psychological thought insofar as it has a bearing on value theory.

JESSUP, Bertram and Rader, Melvin. *Art And Human Values*. Englewood Cliffs NJ Prentice-Hall 1976.

In Part One a general theory of value is defined and aesthetic theory is examined from this viewpoint. The characterization of aesthetic value as a gestalt avoids a onesided emphasis on *form* and *quality* (the objective component) or *feeling* (the subjective component). The *gestalt* consists of the two components and their interlocking relation. The authors then explore the aesthetic value in common life, fine art, and nature. Part Two discusses art in relation to religion, morals, history, science, economic activity, freedom, and urban and regional planning. The book is thus a far-ranging examination of art and aesthetic value in their various and broad connections with the condition of man. It is a critique of culture from an aesthetic perspective.

JETTE, Celine Rita. *The Philosophy Of Nietzsche In The Light Of Thomistic Principles*. NY Pageant Pr 1967.

The first principles and the ethical doctrine of Nietzsche are concisely presented and then systematically refuted by opposing them to the positions of Saint Thomas. She analyses Nietzsche's atheism, his denial of objective purpose and substitution of life as will to power, his equation of truth as impotence and his promotion of lying, his denial of the soul, the value of the individual, human equality and rights, the rejection of Christianity as will to power in decadence and the concomitant rejection of morality and denial of free will, the contention that good and evil are complementary and not antagonistic and that the code of the masters is not that of the slaves.

JOACHIM, Harold H. *Descartes' Rules For The Direction Of The Mind*, Errol E Harris (ed). NY Macmillan 1957.

JOAD, C E M. *Decadence: A Philosophical Inquiry*. NY Philosophical Lib 1949.

The author attempts to direct philosophy back to its original function of judging and guiding the arts and sciences. The title, "Decadence" stems from the "dropping of the object," that is the discarding of the idea of an end or goal and the denial that there can be an object of experience external to that experience. Philosophy says the author, has lost much of its traditional function through its failure to indicate ends and prescribe values, or by obscuring these ends and values.

JOERGENSEN, Joergen. *The Development Of Logical Empiricism*. Chicago Univ Of Chicago Pr 1951.

This recent addition to a familiar series provides a history of logical empiricism in terms of events as well as ideas. It begins with such predecessors as Mach, Russell, and Wittgenstein, and moves on to an exposition of basic tenets as developed by Schlick, Neurath, Carnap, Reichenbach, and many others. Dr Joergensen leaves off at World War II, and Norman M Martin provides a postscript which carries the development up to the present.

JOHANN, Robert O. *The Meaning Of Love: An Essay Towards A Metaphysics Of Intersubjectivity*. Westminster MD Newman Pr 1955.

Johann's book is an attempt to unite the inwardness of the existentialists with a Thomistic teleological realism. Because man is a creature in nature, with ends external to himself, he has desires which can only be fulfilled by appropriating the goods of the world; because he is also a person, whose ends are internal to himself, who must communicate as well as appropriate, he must seek his perfection inwardly. These two strains are necessary ingredients in man, and in him they find their reconciliation.

- JOHANN, Robert O.** *The Pragmatic Meaning Of God.* Milwaukee Marquette Univ Pr 1966.
Johann is chiefly concerned to show that Dewey's concept of experience is compatible with traditional theism.

- JOHANN, Robert O.** The Return To Experience. *Rev Metaph* 17,319–339 Mr 64.
Against the intellectualist tradition in Western philosophy, the author argues for the primacy of experience over thought. Thinking is necessarily ordered to the fulfillment of persons which experience alone can provide. Moreover, the simple identification of knowledge with logical truth is unjustified: the author distinguishes between explicit and prereflective knowledge and between logical and ontological truth. Thinking presupposes the real as already delivered, and the "return" must be a "reconstruction" of experience. After discussing Marcel's three stages of human development, the author concludes that the search for the real is the quest for authentic existence.

- JOHNSON, A H.** *Whitehead's Philosophy Of Civilization.* Boston Beacon Pr 1958.
Whitehead's philosophy of civilization is discussed in this book. Noting that this aspect of Whitehead's philosophy is less well known and appreciated than his work in mathematics and metaphysics, the author presents it as "an impressive treatment of the meaning and values of civilization." Actually the book presents Whitehead's views on Western Christian civilization rather than on civilization *per se*, as discerned in "a series of insights," rather than by "detailed systematic presentation." Since Whitehead wrote no treatise exclusively on this topic, this book draws from *Science and the Modern World*, *Process and Reality*, *Adventures in Ideas*, and articles written by him after 1925. The final chapter relates Whitehead's philosophy of civilization to his "highly technical terminology" and "demonstrates that Whitehead's main ideas in his philosophy of civilization are in accordance with his metaphysics—, i.e., his theory of reality." One chapter discusses various criticisms of Whitehead.

- JOHNSON, A H** and Lowe, Victor and Hartshorne, Charles. *Whitehead And The Modern World: Science, Metaphysics, And Civilization: Three Essays On The Thought Of Alfred North Whitehead.* Boston Beacon Pr 1950.
Whitehead's chief contribution to the philosophy of natural science was his method of "extensive abstraction" for defining ideally exact concepts such as points in terms of relationships perceptually evident. Such definitions are called for if the relational theory of space is taken seriously. The method is explained and defended against some standard criticisms of it. Whitehead's approach to causality and induction is touched on, as another example of his unusual approach to the foundations of natural science. No sharp separation of his philosophy of science from his metaphysics is finally possible.

- JOHNSON, A H.** Leibniz And Whitehead. *Phil Phenomenol Res* 19,285–305 Mr 59.
The author explores the agreements and differences in the metaphysics of Leibniz and Whitehead, especially in relation to their common mentalistic position. The purpose is to give a detailed comparative examination of these important mentalistic positions, with particular emphasis on God, the problem of evil, and the problem of freedom. The primary difference is that Whitehead rejects the mutual exclusiveness implicit in the traditional concept of substance, whereas Leibniz remains consistently within this framework.

- JOHNSON, A H.** Ordinary Experience. *Phil Phenomenol Res* 25,96–107 S 64.
Some philosophers cast aspersions on ordinary experience because of its reputed contradictory and superficial characteristics. This paper is a general examination of some phases of ordinary experience at its best, namely the experience of enlightened, adult, normal, human beings. "Adult" and "normal" have their obvious meanings. By "experience" is meant awareness of an entity. "Enlightened" experience is characterized by comprehensiveness and balance, in particular the recognition of genuine distinctions and the avoidance of the artificial and oversimplification. In the context of this type of experience, the following topics are briefly discussed: the perception of physical objects, meaning, truth, causation, good, God. It is concluded that some philosophers have inadequately observed and interpreted this type of experience.

- JOHNSON, Early Ashby.** *The Crucial Task Of Theology.* Richmond VA John Knox Pr 1958.
The current attacks on theology from various Christian and secular sources are answered in Johnson's book by the setting forth of the aim of theology as the integration of all knowledge, natural and revealed, and its methods as including analysis, induction, authority, and personal commitment. The author recognizes the practical limitations imposed upon theology by language, by its subjective elements, and by the contingency of its common-sense synthesis of methods. But he maintains that theology results in something more than science in its concern with symbolic representation of non-propositional truth.
- JOHNSON, Edgar N** and others. *Freedom And The University.* Ithaca NY Cornell Univ Pr 1950.
This volume discusses the responsibility of the university for the maintenance of freedom in the American way of life. A point of general agreement arising out of the several papers is found in the conclusion that the characteristic element of the American way of life is identical with the central principle of the university tradition: the freedom of disciplined minds to use critically and impartially all relevant evidence toward the solution of human problems.

The author modifies the propositional calculus to prevent the derivation of any statement from a contradiction. He shows that for his system, RC, B is derivable from

A if and only if B is a logical consequence of A. Furthermore, he shows how the steps in the Lewis-derivation of any statement from a contradiction are treated in RC.

JOHNSON, Howard A (ed) and Thulstrup, Niels (ed). *A Kierkegaard Critique: An International Selection Of Essays Interpreting Kierkegaard*. NY Harper 1962.

JOHNSON, J Prescott. The Axiological Theism Of Wilbur Marshal Urban. *Int Phil Quart* 5,335-360 S 65.

Professor Urban developed three relatively distinct theories of value. A psychological theory defines value as the funded affective-volitional meaning of an object for a subject. According to a philosophical approach, value is an objective ought-to-be which transcends being. In a theological theory value is identified with being. In this article I show how, methodologically, these three approaches to the value problem are to some extent unified as based upon the principle of sufficient reason. I then show how, substantively, the former two axiologies give way to and are complemented by the theological view, that of axiological theism, in which value and being are identified. Finally, I discuss certain epistemological problems involved in the identification of value and being, both as such and in the context of Urban's earlier, provisional value theories.

JOHNSON, J Prescott. The Ontological Argument In Plato. *Personalist* 44,24-34 Wint-Ja 63.

Plato employs the *a posteriori* mode of reason to remove the initial hypothesis which qualifies the ontological argument. He argues that in conceiving of the various specific Ideas, the supreme Idea of the Good is conceived as the constitutive and ordering principle of the lesser Ideas. The Idea of the Good thus assuredly obtains as content for thought. This is, in effect, Plato's refutation of positivism. In the *a priori* mode of reason, Plato demonstrates that the Idea of the Good must, in order to be conceived as self-consistent content for thought, be conceived as necessarily self-existent. To think the Idea of the Good as "anhypotheton," as unconditioned, is to think it, necessarily, as self-existent. Plato here removes himself from the Kantian criticism that the merely possible and the existent cannot differ qualitatively.

JOHNSON, James Turner (ed) and Smith, David Herbert (ed). *Love And Society: Essays In The Ethics Of Paul Ramsey*. Missoula MT Scholars Pr 1974.

The essays in this book respond to the work of theological ethicist Paul Ramsey under three headings: Foundations, War and Political Ethics, and Medical Ethics. Some of the essays are analytical and interpretive of Ramsey's thought, while others use it as a base for further moral investigation of issues touched on by Ramsey. Topics treated include good acts v. good rules, killing, just war theory, just distribution of medical care, the role of covenants in ethics, death and dying, and experimentation on minors.

JOHNSON, James Turner. *Ideology, Reason And The Limitation Of War: Religious And Secular Concepts, 1200-1740*. Princeton NJ Princeton Univ Pr 1975.

This book traces and interprets the development of just war theory from the medieval period to the origins of secular international law. Classic just war doctrine, not in coherent form before 1500, derived from interaction between religious and secular forces and represented a broad cultural consensus about limits to war. When medieval culture collapsed, just war doctrine divided into a holy war doctrine stressing religious-ideological truth claims and a rival naturalistic doctrine that gave birth to modern international law on war. But lacking the moral element, legal limits on war are not as just as those of classic doctrine.

JOHNSON, Martin. *Time, Knowledge, And The Nebulae: An Introduction To The Meanings Of Time In Physics, Astronomy, And Philosophy*. NY Dover 1947.

The author distinguishes "between physical and metaphysical discussions of time" and suggests "that the dissection has been incomplete and misleading and obscures the main participation of temporal experience in the mental constructs of science."

JOHNSON, Oliver A. God And St Anselm. *Journal Of Religion* 45,326-334 1965.

The paper raises a question about the ontological argument rarely considered in the literature: What can the nature of the God whose existence the argument "proves" be? The conclusion argued for is that, on logical grounds alone, it can be shown that this God cannot be a being transcendent of the world, therefore cannot be the traditional God of Christianity.

JOHNSON, Oliver A. Rightness, Moral Obligation, And Goodness. *J Phil* 50,597-607 S 53.

The paper is concerned with the critique of axiological ethics found in the writings of the deontologists, particularly Prichard and Ross. The major arguments are reviewed and assessed and the conclusion reached that the deontologists' account of moral obligation is unacceptable. A modified form of teleological theory is then offered as the most satisfactory account of the moral life.

JOHNSTONE JR, Henry W. An Alternative Set Of Rules For The Syllogism. *Phil Sci* 21,348-351 O 54.

The traditional five rules of the syllogism are transformed into a dual set by substitution of "negative" for "particular," "universal" for "affirmative," "distributed" for "undistributed," and *vice versa*. The author establishes that each of 1-5' (the dual set) is implied by 1-5 and *vice versa*, using some formal proofs. He also establishes that, like 1-5, each of 1-5' is independent of the others. It is shown that this duality also applies to the rules of the syllogistic figures. The duality, it is emphasized, will not work under the existential interpretation of universal propositions.

JOHNSTONE JR, Henry W and Marienthal- Maschler, Chaninah. Skepticism And Inferior Knowledge: A Note On Aristotle's Pluralism. *Phil Phenomenol Res* 22,472-480 Je 62.

The function and peculiar character of Aristotle's pluralism is explained. It is maintained that the pluralism serves as a rejoinder to scepticism; for instance, the sceptic ignores the peculiarity of the nature of knowledge in political life. The plurality of types of knowledge is shown also as not merely a reply to scepticism, but as attended to by Aristotle independently. The last half of the article intends to show that Aristotle envisaged an ordered plurality of prior and posterior with dependency as the ordering principle, and that, therefore, "inferior knowledge" need not form a basis for doubt; Aristotle retains both variety and excellence.

JOHNSTONE JR, Henry W. Argument And Truth In Philosophy. *Phil Phenomenol Res* 18,228-236 D 57.

Philosophy is distinguished from science in terms of the role of argument in each. The author defines the truth of a statement as being *relative to argument* when "it is impossible to think of the statement as true without thinking of an argument in its favor." It is maintained, using relevant examples, that scientific statements, although relative to certain assumptions, are considered true no matter what arguments derive them from their assumptions, but no philosophical statement can be true except relative to an argument. The author analyzes a philosophical statement to demonstrate that it is incomprehensible apart from arguments for and against it. This leads to a discussion of philosophical argument as "controversy," a distinction which sharply divides philosophy from science.

JOHNSTONE JR, Henry W. Can Philosophical Arguments Be Valid? *Bucknell Review* 11,89-98 1963.

Addressing Waismann in "How I See Philosophy," the author disagrees with the idea that a philosopher *builds up a case* (instead of proving) and develops his own idea of the validity of a philosophical argument. It is claimed that in "building a case" the rightness of the choice being made can be analyzed independent of the considerations which led to the choice, but in philosophy the right choice must be made for the right reasons. The second half of the article allays the notion that only mathematics has valid arguments while other arguments live for persuasion: while arguments in mathematics can be rigorous, arguments in philosophy (e.g., arguing a

reductio can be *cogent* and formally valid; an argument is cogent to whomever is forced to accept its presuppositions regardless of a lack of general assent.

JOHNSTONE JR, Henry W. Cause, Implication, And Dialectic. *Phil Phenomenol Res* 14,400-404 Mr 54.

A threefold classification of knowledge as necessary/contingent, synthetic/analytic, and definite/non-definite is introduced to make room for dialectic as a kind of knowledge. The author analyses the relations of cause and effect, premises and logically valid conclusion, and dialectical thesis and antithesis along these lines. Examples of dialectic are given from Hegel and others to support the classification of it as non-definite, synthetic, and necessary. The parameter of definiteness is considered to be a crucial addition to a twofold classification in characterizing dialectical knowledge. All eight possible classification schemes are considered. Four are argued to be insignificant (help from Hume, Kant, Logical Positivists). The other four classify material implication, logical implication, cause, and dialectic.

JOHNSTONE JR, Henry W. Hume's Arguments Concerning Causal Necessity. *Phil Phenomenol Res* 16,331-340 Mr 56.

An analysis of effectiveness of some of Hume's arguments in a framework developed by the author. The author states his position that arguments attacking positions attempt to show that, given the assumptions of a position, certain consequences are incompatible with it—a valid species of *argumentum ad hominem*. Although this species does not work for constructive philosophical "proofs," it will work inversely in arguments (defending such proofs) which cite possible objections. These charge *petitio*: the objection assumes what the position denies or *vice versa*. Eight arguments are judged as *ad hominem* or as charging *petitio* and as effective or ineffective in either case. The analyses elaborate the author's position, and the mode of analysis is suggested as an adjunct to considering a philosopher's conclusions.

JOHNSTONE JR, Henry W. Knowledge And Purpose. *J Phil* 47,493-500 Ag 50.

A refutation of the doctrine that certification of any empirical proposition requires an infinite context of facts. A distinction is made between practical knowledge and theoretical knowledge. It is argued that practical knowledge requires only a finite context of facts to service a system of purposes, and furthermore that it is none other than what is called "empirical knowledge." The possibility of a type of knowledge that requires an infinite context (perhaps, theoretical knowledge) is left open to question. Four objections to the idea of practical knowledge are entertained in order to strengthen the thesis.

JOHNSTONE JR, Henry W. New Outlooks On Controversy. *Rev Metaph* 12,57-67 S 58.

This is a combined review of two books, *Methods and Criteria of Reasoning* by Crawshaw-Williams and *La nouvelle rhétorique* by Perelman and Olbrechts-Tyteca. *mCR* is said to be concerned with tests for correctness of statements "put forward with a sort of claim to general acceptance" (*MCR*, pages 8-9), while *La nouvelle rhétorique* is concerned with ways of expressing claims to general acceptance. *mCR* is outlined, and the author takes issue especially with the treatment of context. Next, *La nouvelle rhétorique* is outlined and objections are raised about the discussions of "quasi-logical arguments," "arguments based on the structure of the real," and "dissociation" with the conclusion that the book may be ambiguous as to whether rhetoric is a mode of truth or a technique.

JOHNSTONE JR, Henry W. Philosophy And *Argumentum Ad Hominem*. *J Phil* 49,489-498 Jl 52.

JOHNSTONE JR, Henry W. Self-Refutation And Validity. *Monist* 48,467-485 O 64.

The author challenges some distinctions made by Passmore in *Philosophical Reasoning* concerning self-refutation and the nature of validity in philosophical arguments. After outlining Passmore's idea of absolute self-refutation (the only valid sort for him), the author documents three reasons for rejecting the distinction between it and other kinds of self-refutation (including *ad hominem*): (1) absolute self-refutation does not reduce to an assertion of *p* and not-*p*; (2) conclusions of absolute self-refutations are *not* immune to evasion; (3) the supposition that absolute self-refutations are valid while others are not cannot be upheld. The article concludes by citing valid uses of *petitio* and *ad hominem* type refutations and states that validity admits of no effective criterion but is relative to arguments.

JOHNSTONE JR, Henry W. The Categoriocentric Predicament. *S J Phil* 4,207-220 Fall 66.

In an issue devoted to a critical assessment of Everett Hall's Commonsense Realism, the author considers hall's "categoriocentric predicament" (a philosopher's categorical commitment systematically distorts his interpretations of the efforts of other philosophers). The author attempts to critically assess this idea and suggests that Hall might better call it a paradox. The greater part of the article is devoted to: 1) the pattern of Hall's criticism of positions that respond to alleged incomparability and incommunicability of categorically committed philosophies, and 2) Hall's proposal that common thought and speech are the basis for communication and comparison. Many of Hall's arguments are branded as use of *ad hominem*, and it is suggested that in places Hall relies on the law of non-contradiction as extra-categoriocentric.

JOHNSTONE JR, Henry W. The Nature Of Philosophical Controversy. *J Phil* 51,294-299 My 54.

JOHNSTONE, H W and Rosen, S H and Anderson, J M. *Essays In Philosophy*. University Park Penn State Univ Pr 1962.

These ten essays are written in a sophisticated style, and range over problems in metaphysics, aesthetics, epistemology, and the philosophy of science. They bear out the authors' claim to be "united by nothing more than a sense of the importance and mission of a philosophy which assumes its total responsibilities" and an interest in the classical traditions of Western philosophy.

JOHNSTONE, Henry W. *Philosophy And Argument*. University Park Penn State Univ 1959.

Combining previous work with fresh material the author offers his most encompassing presentation of a theory of argument. Chapter II recognizes disagreement as more than pure logical opposition and concludes that the only response to disagreement is real controversy. Chapter III demonstrates that philosophical statements are unintelligible except relative to arguments pro and con. Chapter IV distinguishes validity from persuasion. Chapters V and VI deny the possibility of *ad rem* in philosophy and defend *ad hominem* as only valid argument. Chapter VII tests the theory on some of Hume's arguments, while Chapter VIII separates logical from "ontological" systems (paradigmatic for the relations among philosophical positions). Chapter IX shows the view of personality attendant on the possibility of valid philosophical arguments; the *homo in ad hominem*.

JOHNSTONE, Henry W. A New Theory Of Philosophical Argumentation. *Phil Phenomenol Res* 15,244-252 D 54.

A discussion of *Rhétorique et philosophie* by Perelman and Olbrechts-Tyteca, a book which attempts to define philosophical argumentation in terms of rhetoric. The article begins by explicating the authors' version of rhetoric, how it contrasts with formal logic and psychology of suggestion and parallels Aristotle's panegyric rhetoric. Their concern with adherence (not abstract truth), the nature of philosophical audience, and interaction of proponent and proposition are outlined. Ramifications for contrasting absolutism and relativism, for sociology of knowledge, and for the problem of freedom are dealt with. The conclusion is a critique of the position which parts ways with the authors' for, among other reasons, their belief in no difference, beyond degree, between rhetoric and dialectic.

JOHNSTONE, Henry W and Anderson, John M. *Natural Deduction, The Logical Basis Of Axiom Systems*. Belmont CA Wadsworth 1962.

Based upon Gentzen's methods of natural deduction, this book sets up in Part One, the standard logic through identity and description theory, and in Part Two discusses the metatheory of this system. Chapter 2 presents the propositional rules, with four separate rules for negation to facilitate comparison with the intuitionistic logic; in addition, Chapter 3 introduces the method of truth tables and normal forms, and Chapter 4 takes a brief glance at multivalued, intuitionistic, and modal logics. Chapter 5 and 6 are devoted to the monadic and general predicate logics. Part Two begins with a consideration of axiom systems generally, then discusses the consistency and completeness of each of the logics, ending with the Lowenheim-Skolem theorem. The final two chapters present intuitive set theory and some of the divergent approaches to the paradoxes engendered.

JOLY, Ralph Ph. The Human Person In A Philosophy Of Education. NY Humanities Pr 1966.

JONAS, Hans. *The Gnostic Religion: The Message Of The Alien God And The Beginnings Of Christianity*. Boston Beacon 1958.

JONAS, Hans. *The Phenomenon Of Life: Toward A Philosophical Biology*. NY Harper And Row 1966.

"Put at its briefest," Jonas writes, "this volume offers an 'existential' interpretation of biological facts." However, he is concerned with the organic roots of man's existence, roots whose human dimension has not always been properly acknowledged in scientific biology. The development of the order of nature from its primitive beginnings to the expression of man's freedom is explored through a series of essays, whose themes include life, death, and immortality; Darwinism, metabolism, and motility; gnosticism, existentialism, and nihilism. In addition to a critique of cybernetics, the author presents a phenomenological description of the senses, centering on "The Nobility of Sight," and an essay in philosophical anthropology concerned with the nature of the image. A chapter on "Heidegger and Theology" presents in sharp outline "the profoundly pagan character of Heidegger's thought." Life is "viewed as an experiment with mounting stakes and risks which in the fateful freedom of man may end in disaster as well as in success."

JONAS, Hans. Causality And Perception. *J Phil* 47,319-323 My 50.

JONAS, Hans. Heidegger And Theology. *Rev Metaph* 18,207-233 D 64.

Despite its Christian elements and quasi-religious style, Heidegger's thought is essentially immanentist and profoundly pagan. After examining Heidegger's notions of being and fate, the author argues that the being whose fate Heidegger ponders is thoroughly secular and that, against this view, theology should gaurd the transcendence of its God. He then discusses the "groundwork for a natural theology" sketched in Heidegger's *Letter on Humanism* and argues that to define theology as a primal thinking concerning God is to accept a doctrine of permanent revelation and to admit the theological value of glossolalia. He closes with remarks on demythologizing.

JONAS, Hans. Life, Death, And The Body In The Theory Of Being. *Rev Metaph* 19,3-23 S 65.

The author's intent is to explain the central ontological significance of the problems of life, death, and the body. For the ancients, who experienced the omnipresence of life, death required explanation, but in modern thought death is natural and life the problem. The author argues that the discovery of matter and spirit as separate

spheres was crucial to this development. Two antithetical monisms, represented by modern materialism and modern idealism, are now possible. But pure consciousness is as little alive as pure matter, and the existence of feeling life in an unfeeling world remains problematic.

JONES, David H. Making And Keeping Promises. *Ethics* 76,287–296 Jl 66.

This article is a critical analysis of the use of the concept of the practice of promising by Rawls and Searle to justify the claim that one ought to keep a promise by appealing to the existence of the rules of the practice as institutional facts. In addition to casting doubt on the claim that there is one publicly shared and understood practice of promising, as these authors contend, it is also argued that the question "Ought I to keep my promise" can only be an external question asked by a person in a role not specified by the practice.

JONES, Frank P. Note On Collection Of Letters From John Dewey. *Educ Theor* 17,92–93 Ja 67.

JONES, Hardy E. *Kant's Principle Of Personality*. Madison 1971.

JONES, Howard Mumford. *American Humanism: Its Meaning For World Survival*. NY Harper 1957.

The author diagnoses the current issues in American humanism. Knowledge in the New World descended from Renaissance humanism and had special meaning in the new American republic. But this has been increasingly replaced by the "specialisms" of the "humanities," the "experts," and the "salesmen." This has meant a fragmentation of knowledge, a loss of philosophical meaning, and a dethroning of humanism. The core of true "humanism" is faith in the "dignity of individuals" and their "general intelligence," and a re-emphasis of this would have significant survival value for Western civilization.

JONES, Howard Mumford. *Reflections On Learning*. New Brunswick NJ Rutgers Univ Pr 1958.

This book contains a series of three lectures on the problems of education confronting our civilization. The first lecture—War, Science, and Learning—discusses the unbalancing influence of the governmental demands for scientists and engineers to the neglect of the humanities. The second lecture—The Grammar of the Arts—points to the tendency to envision the artist and the artisan as one; with, perhaps, the latter setting norms. The third lecture—A Joy Forever—briefly scans the history of modern scholarship and some of the extreme positions inadvertently assumed.

JONES, Jack. Depth—Conservationism: A Post-Marxist Ideology? *Centennial Review* 10,327–346 Sum 66.

In the nature-conservationist themes there is an implicitly criticism of cultural evolution itself as a general hypertrophy of power at the expense of natural or more natural ways of living. This significantly complements the Freudian criticism of culture as entailing progressive instinctual renunciation. Marx misinterpreted this as the progressive "alienation" of "the worker" under capitalism. But both the external and the internal "alienation" of cultural from natural reality has only worsened under the auspices of Marxist totalitarianism. The twentieth century has yet to transcend Marx and achieve both theoretical and practical control over the environmental and totalitarian hypertrophies.

JONES, Jack. Five Versions Of Psychological Man. *Salmagundi* 86–113 Sum–Fall 72.

This article discusses Freud, Rank, Marcuse, N O Brown and Rieff, maintaining that Rieff's concept of emerging "psychological man" is viable only if established philosophically against Marxist "economic man." Most of Freud's biological, infantile, intrafamilial, Oedipal concepts have to be discarded, but there remains his great concept of repression, and of cultural evolution as entailing the progressive renunciation of the more natural ways of thinking and living. To this we must add Otto Rank's concept of the irrational factor in man as the belief in immortality, objectively false but subjectively true. Marcuse and Brown not only do not understand this last factor; their own work is fundamentally irrational.

JONES, Jack. Herbert Marcuse And The Cunning Of Revolution. *Michigan Quarterly Review* 9,71–84 Ap 70.

This article is an examination of Marcuse, concluding that he represents essentially a retrogression within intellectual history from Freudianism back to Marxism. Marx's early concept of "alienation" had been most fundamentally a proto-Freudian insight into the repression of natural by cultural reality—later mis-identified by Marx with "capitalism." The deeper issue was therewith anamorphosed as the socio-economic "class struggle," and the abolition of capitalism was tacitly equated with the abolition of repression. Marcuse only brings this out more explicitly, and also inaccurately and irrationally. All that can be done is to recognize and balance off reasonably the inherent contradiction, which inevitably has become more severe under the misleading Marxist auspices.

JONES, Jack. Otto Rank: A Forgotten Heresy. *Commentary* 30,219–229 S 60.

This article insists on the major importance of Otto Rank, once Freud's closest associate and intended successor. Rank is now commonly, but misleadingly, identified with the "birth-trauma" theory. His most significant and now little-known ideas actually came only later—those concerning the creative will and the "irrational" or religious factor in human nature. This last, despite Freud, not reducible to "the father" or anything real, was rather the inherent natural-psychological belief in immortality, a subjective value, truth and reality even though objectively illusory or "irrational." Since the religious eras this has persisted into and determined much in modern thought and sensibility, mistakenly thought of as "rational," and including much in Marxism.

JONES, William Thomas. *Facts And Values*. Stockton CA Pacific Phil 1961.

The basic crisis of contemporary culture is the seeming conflict between objective facts and subjective values. But facts are relative to the language in terms of which we interpret our perceptual foregrounds, and the rules of any language are determined by our values. Since both scientific and normative languages involve both facts and values, although in different ways, these two sets of languages provide complementary realities rather than competing descriptions of the same reality.

JORAVSKY, David. *Soviet Marxism And Natural Science, 1917–1932*. NY Columbia Univ Pr 1961.

The story of Soviet Marxism that Joravsky tells is both fascinating and frightening. Briefly examining the background in Marx and Engels, he shows how their views toward the philosophy of natural science are ambiguous, containing a mixture of metaphysical and positivistic elements. Lenin's legacy was also ambiguous. Though he elaborated the concept of *partiinost*—the ideological control of philosophy by the Party's Central Committee—he himself used it broadly, tolerating and encouraging the separation of philosophic disputes from practical political affairs. Tracing the emergence of various factions after Lenin's death, we see how, under Stalin, dialectical materialism eventually became "a ritualistic incantation of the one true Weltanschauung that inspired the one true Party."

JORDAN, Elijah. *Business Be Damned*. NY Schuman 1952.

The author applies his ethical system to a critique of American business in its relation to the nation's industry, its political and legal structure and its cultural order. In an original analysis of the origin and nature of the business corporation, he indicates that it is through the corporation, reintegrated into American life in new relationships and responsibilities, that one may hope for a sane reconstruction of the American industrial system.

JORDAN, Elijah. *Essays In Criticism*. Chicago Univ Of Chicago Pr 1952.

JORDAN, Elijah. *The Good Life*. Chicago Univ Of Chicago Pr 1949.

The author presents a system of moral philosophy. It is an error to assume as in traditional ethical theory, he asserts, that all of the characteristic qualities of action are determined by the states of mind of the actor. The good life, he says, is the whole life. It includes all capacities and involves all such external conditions in nature and in the cultural milieu as are required for the performance of the complete act. The

- good life is thus the life of the corporate person. The difficulty of leading a good life in a bad society is thus obvious. Ethics, Jordan states, is a *practical* discipline involving the relation of knowledge to controlled action.

- JORDAN, Rudolf.** *The New Perspective.* Chicago Univ Of Chicago Pr 1951.
- This book represents an attempt to formulate the metaphysics of our age in the spirit with which Aristotle worked out the metaphysical perspective of his. In brief the author seeks for a new perspective in philosophy which will be correct because based upon an encyclopedic knowledge of modern scientific discovery. He attempts to develop a contemporary philosophy starting from the facts, remaining with them and embracing the substance of the arts and sciences in our generation.
- JORDAN, Z A.** *The Evolution Of Dialectical Materialism.* NY St Martin's Pr 1967.
- This book seeks to show that dialectic materialism is by no means a single doctrine formulated by Marx and Engels and only explained, amplified and defended by their successors. It contends that Marx is not a dialectical materialist but a naturalist and that the importation of the Hegelian metaphysical element is to be ascribed to Engels. The relations between these thinkers and Feuerbach, Saint-Simon and Comte are also investigated. There follows an account of the amendments made by Plekhanov, Lenin and Stalin who are described as having transformed dialectical materialism into a political cosmology. The latter part of the book discusses the relation between dialectical materialism and the materialist theory of history and the differences in the views of this relation held by these various writers.
- JORDAN, Z.** *The Development Of Mathematical Logic And Of Logical Positivism In Poland Between The Two Wars.* NY Oxford Univ Pr 1945.
- This is a very useful and readable account of Polish contributions to logic and the philosophy of science since about 1910. The scope and importance of Polish work in these fields is still unfamiliar to most Anglo-American students, and the author has rendered them a genuine service in preparing this clearly written outline of significant Polish accomplishments. He supplies informative background material for the so-called Lwow-Warsaw and Cracow schools of logic, and summarizes the major achievements of their outstanding members. Of particular interest to philosophers who are not specialists in mathematical logic are the sections in the pamphlet devoted to Polish positivism and the writings of Kotarbinski and Ajdukiewicz, its chief exponents; and there is a suggestive account of Polish critiques of positivist analyses.

- JOSKE, W D.** *Material Objects.* NY St Martin's Pr 1967.
- JOSKE, W D.** Behaviorism As A Scientific Theory. *Phil Phenomenol Res* 22,61-68 S 61.
- It is stated that philosophical behaviorists are not doing science, but believe they are helping science, by opposing private mental states and irreducible psychic occurrences. It is argued that the doctrines of such behaviorists are not in any sense a scientific doctrine and that they are dangerously unscientific. In attacking the metaphysics of dualism, it is uncritically assumed that activities cannot have both a mental and physical aspect. Dualism has not been demolished; all that has been shown is that there is a need to re-examine those mental terms which traditionally stood for non-physical statements and events. The use of such terms must be explored, as well as the connection between mental and behavioral aspects of their use.
- JOSKE, W D.** Inferring And Perceiving. *Phil Rev* 72,433-445 O 63.
- In order to answer the question whether perceiving always involves inferring, Joske clarifies the concept of inferring, setting up two requisites of inferring. First, if we feel justified in making an inference, we must be prepared to repeat that inference should occasion arise. And second, in assenting to the conclusion of an inference, we must commit ourselves to more than a simple awareness of its base commits us. He then considers cases of perceiving and shows that they do not always involve inferring, using these requisites.

- JUNG, Hwa Yol.** Wang Yang-ming And Existential Phenomenology. *Int Phil Quart* 5,612-636 D 65.
- This paper is an essay in comparative philosophy which attempts to show a close affinity between the Chinese philosopher Wang Yang-ming and existential phenomenology and hopefully to open a dialogue between Chinese philosophy and the existential and phenomenological movement. The essay centers around two main themes: (1) intentionality and (2) the *Lebenswelt*. For Wang, consciousness is the stream of intentional acts: it is directed primarily towards action and also towards knowledge. He is concerned with the problematic of the everyday existence of man in relation to others, and his "existential" and "dialogical" view of intersubjectivity affirms the idea that only social existence is authentic existence. His thought on the unity of knowledge and action becomes the culminating link to existential phenomenology. Moreover, *liang-chih* is interpreted as preflexive knowledge and is related to the Husserlian view of intuition. In Wang's thought, reality is an encounter between the self and the world and truth is the dialectical mediation between knowledge and action.

- KADING, Daniel** and Kramer, Martin. Mr Hospers' Defense Of Impersonal Egoism. *Phil Stud* 15,44-45 1964.
- The article goes into John Hospers' position that a form of egoism which Hospers calls "impersonal" might be held without inconsistency. According to Hospers, "The impersonal egoist is one who says that the duty of each and every person (including himself) is to pursue his own interest exclusively." The authors point out that Hospers is suggesting that the impersonal egoist avoids inconsistency by favoring everyone's trying to win rather than everyone's winning, and that he is successful only by resisting any attempt to justify "trying." But, they argue, in such a view success or failure becomes irrelevant for the "egoist," which raises the question of whether he is an egoist at all.

- KADING, Daniel.** Moral Action, Ignorance Of Fact, And Inability. *Phil Phenomenol Res* 25,333-355 Mr 65.
- I try to show that contrary to Prichard in "Duty and Ignorance of Fact" there are good reasons for maintaining that in certain respects at least we may be unavoidably ignorant of our duties and obligations, and of what is right and wrong generally. Why did Prichard stand so firmly against unavoidable ignorance of our duty? I suggest that he is really thinking about one of the conditions for being blameworthy, for certainly it would be contradictory to speak of someone's being blameworthy by virtue of unavoidable ignorance. I also raise the question of the connection between

moral action and ability, and I try to show that there is much to be said against the usual view that "duty to," "wrong not to," etc., entail "able to."

KADING, Daniel. Mr Mothershead's Two Conceptions Of Freedom. *J Phil* 50,664-667 O 53.

KADING, Daniel. On Promising Without Moral Risk. *Phil Stud* 11,58-62 1960.

This article goes into the kind of obligation involved in making a promise, focusing in particular on cases involving conflict of claims. The author argues that in general, unless there are explicit qualifications to the contrary, it is assumed that the parties to a promise recognize the performance of the act mentioned in the promise to be of a certain order of importance, and that unexpected events render the promise inapplicable if and only if they are of a higher order of importance. He further contends that the order of importance is not a question of personal moral convictions, but rather of prevailing moral practices.

KADING, Daniel. Re-defining Moral Judgments. *J Phil* 53,513-522 Ag 56.

KADISH, Mortimer R. Evidence And Decision. *J Phil* 48,229-241 Ap 51.

In dealing with the problem of the relationship of evidence to decision making, the author aims to explicate the following points: (1) The reason why references to empirical grounds logically sufficient for decision making have to make sense. (2) How to locate those grounds to which "evidence for" in contradistinction to "evidence that" refers. (3) An examination of some of the objections against genuine evidence in decision making. (4) The implications of this discussion for a general theory of rational or warranted choice.

KAEIN, Eugene F. *An Existentialist Aesthetic: The Theories Of Sartre And Merleau-Ponty.* Madison 11962.

The aesthetic views of Sartre and Merleau-Ponty are the theme of this expository and critical treatise. Since neither philosopher has produced a full or systematic aesthetic theory, Kaelin has pieced together their writings in the field and shown their grounding and development in Sartre's early phenomenological studies of imagination and Merleau-Ponty's work on Gestalt psychology. The sources of some of their ideas are explored in the writings of Alain and Saussure. The central criticism of Sartre's aesthetics is that it "begs the question of perceptual knowledge"; Merleau-Ponty is seen to have advanced beyond Sartre in this regard, but he too is criticized for failing to articulate a method of procedure in the domain of critical analysis. Despite these reservations, Kaelin's view is that a positive contribution to philosophy is promised in existentialist aesthetics in so far as it broadens the social-cultural dimension of aesthetic activity.

KAEIN, Eugene Francis. *Art And Existence: A Phenomenological Aesthetics.* Lewisburg PA Bucknell Univ Pr 1970.

In some respects this book is an up-dating of the author's *An Existentialist Aesthetic: the Theories of Sartre and Merleau-Ponty*. But it is much more than that. The author does devote a lot of space to Merleau-Ponty, from whom much of E Kaelin's own theory of art is derived. There are also analyses of the work of Roman Ingarden and Martin Heidegger. Heidegger, especially, is treated at length since the role of art is so significant in the German philosopher's later work. But in the last analysis, phenomenological aesthetics must prove its worth by returning to the "things themselves"; and in this case the "things" are art works. Accordingly, E Kaelin develops his own theory of aesthetics, along phenomenological lines, with numerous illustrations (and detailed discussions) of art works ranging from painting to music and the film. This is an introduction to aesthetics from a phenomenological point of view. But it is difficult to make the phenomenologists speak plain (or clear) English.

KAHLER, Erich. *Man The Measure: A New Approach To History.* NY Pantheon Books 1943.

This is a contribution towards a philosophy of history by the author of *The German Character in the History of Europe*. The work is based on two leading tenets. The first distances itself both from the pluralistic views of history in terms of specific peoples, nations, races, etc., and from the unilateral attitudes which regard history as that of "Man," either as of divine origin, or as constituted by reason, or as having biologic continuity with the animal kingdom. Kohler's second pillar is methodological. It holds that every principle carries within itself the germs of its own destruction and transcendence. Thus, the disintegration of the Roman Empire came about through the very complete application of its own *polis* system.

KAHLER, Erich. *The Meaning Of History.* NY Braziller 1964.

An argument against the claim that history has no meaning, based on the author's view that man gives meaning to happenings in the world by comprehending their form and purpose, and in so doing creates history. There is then no history without meaning. The greater part of his argument is his "history of history," an account of how the concept and actuality of history developed in Western civilization into an independent, purely secular history. The author argues that there is an order in history, a "cyclic expansion" of the scope of human existence with an inner coherence. The meaning of our moment within this larger meaning of history is the meaning of man and human life.

KAHLER, Erich. *The True, The Good, And The Beautiful.* Columbus Ohio State Univ Pr 1960.

KAHN, Charles H. *Anaximander And The Origins Of Greek Cosmology.* NY Columbia Univ Pr 1960.

An examination of the doxography, in this case a critical analysis of Theophrastus's report on Anaximander, is followed by an exposition of the "Milesian Theory of the Natural World," and a discussion of "Anaximander's Fragment: the Universe Governed by Law." The author stresses the "geometric spirit" of Anaximander, whom he regards as the first to develop "a rational outlook on the natural world." The fragment of the philosopher is interpreted as referring to "the continuous change of opposing forms or powers into one another." A concluding chapter on "The Greek Philosophy of Nature" finds an inherently unified Milesian tradition running down to Democritus and Plato and stressing "elemental balance and cosmic periodicity," a tradition which enabled "The Greek view of the cosmos (to preserve) that sense of the link between man, society and nature which lies at the heart of the old myths."

KAINZ, Howard. *Hegel's Phenomenology, Part I: Analysis And Commentary.* University Univ Of Alabama Pr 1976.

A detailed analysis of the first half of Hegel's *Phenomenology* tracing the development of the individual from sense-certainty to social consciousness is supplemented by general considerations regarding the overall structure and significance of the *Phenomenology* as a whole, and by a commentary which is geared to placing various parts of the *Phenomenology* in their proper textual and historical perspective.

KAINZ, Howard. *The Philosophy Of Man, Revisited.* Washington DC Univ Pr Of America 1976.

This book analyzes a new look at some traditional problems raised by the ancients about man, e.g., how man differs from the animals, whether there is any specifically human instinct, whether the human personality is to be interpreted dualistically or monistically, whether man is free, and whether there is survival after death. Liberal use is made of the findings of anthropology, psychology and parapsychology.

KAINZ, Howard. *The Unbinding Of Prometheus: Towards A Philosophy Of Revolution.* Long Island NY Libra 1976.

At the present time the term, "revolution" or "the revolution", has become almost synonymous with the Marxist revolutionary movement in its various forms. One is liable to forget that the concept of revolution antedates and supercedes Marxism, and even now has a much broader connotation than that subscribed to by Marxism. *The Unbinding of Prometheus*, employing various "non-linear" approaches—dialogue, phenomenological analysis, mythological exegesis—transcends the exclusively Marxian interpretation to explore a broad range of viewpoints which are competing with Marxism for dominance in our era and for recognition as the revolution. Particular attention is given to the ideological impact of the positions of Jefferson, Hegel, Marx, Nietzsche, and Freud. Attention is also given to the socio-political and ethical problems which are encountered by any revolutionary whose values diverge fundamentally from established values. The book concludes with an examination of the relationship of revolution to the absurd, and to the possible positive relevance of the category of absurdity to revolution.

- KALLEN, Horace M And Others.** Conversation On Santayana. *Antioch Rev* 19,237-270 Sum 59.
- KALLEN, Horace M.** *A Study Of Liberty*. Yellow Springs OH Antioch Pr 1959.
- This study draws upon many sources in maintaining that freedom is the touchstone for an understanding of the human condition, both of man's possibility and his development in a world of chance and change. Kallen argues that mankind can best achieve liberty by adopting a pragmatic view of ideas which neither neglects the actual nor distorts the ideal.
- KALLEN, Horace M.** *Art And Freedom* (2 Vols). NY Duell Sloan Pearce 1942.
- Dr Kallen's procedure is to consider the philosophies of art, whether those of professional or born philosophers or of men of art or science, and any other philosophical laymen, in a frame of reference of causes and consequences not only esthetic, but financial, religious, economic, political, scientific, and cultural.
- KALLEN, Horace M.** *Cultural Pluralism And The American Idea*. Philadelphia Univ Of Penn Pr 1956.
- The first part of this book consists of a three-part extension of two lectures given by Professor Kallen of the New School for Social Research before the Albert M Greenfield Center for Human Relations of the University of Pennsylvania. In the second part, nine scholars in the field: Stanley H Chapman, Stewart G Cole, Elizabeth F Flower, Frank P Graham, R H Henle, Herold C Hunt, Milton R Knovitz, Leo Pfeffer, and Goodwin Watson, contribute critical comments upon Kallen's views; and in the third part the latter makes a brief reply to his critics.
- KALLEN, Horace M.** *Freedom, Tragedy, And Comedy*. Dekalb N Illinois Univ Pr 1963.
- The title of this pamphlet sufficiently indicates the subject matter of these three popular lectures. The style is appropriately rhetorical and allusive; the occasion was not one calling for close argument. As to freedom, Professor Kallen thinks it is a good thing, and that we have it. Tragedy and comedy are exercises of freedom. Tragedy is consequent on choice, which is inevitably exclusive, and often an assertion of individual value against external compulsion. Comedy is more amusing: "laughter is the surge of freedom attained," and signals the triumph of the good.
- KALLEN, Horace M.** *Patterns Of Progress*. NY Columbia Univ Pr 1950.
- KALLEN, Horace M.** *Philosophical Issues In Adult Education*. Springfield IL Thomas 1962.
- This work consists of four essays written at different times for different occasions. The author discusses the origin of the concept of adult education, attributing its first important expression to comments in *The Education of Henry Adams*. The philosophic issues referred to in the title of Professor Kallen's book revolve around two key symbolic terms: "The American Dream, the belief that America is the land of greatest opportunity in which life is better, fuller, and richer than anywhere else in the world"; "The American Idea," the belief in equal liberty for all human beings.
- KALLEN, Horace M.** *Secularism Is The Will Of God: An Essay In The Social Philosophy Of Democracy And Religion*. NY Twayne 1954.
- KALLEN, Horace M.** *The Education Of Free Men: An Essay Toward A Philosophy Of Education For Americans*. NY Farrar Strauss 1949.
- Kallen asserts that for the most effective system of education and for the fullest realization of the individual's capabilities, education must be designed in the light of the personal, social, psychological and cultural requirements of the individual. Education must be flexible enough to meet the particular and unique needs of the particular and unique individual, if the diversity of man and society is to be retained. The end and aim of the system must be, he asserts, the development of the individual as a free member of a free society.

- KALUPAHANA, David J.** *Buddhist Philosophy: A Historical Analysis*. Honolulu Univ Pr Of Hawaii 1976.
- The author attempts to present the primitive form of Buddhism together with some of its major schools. His approach is predominantly historical, with an emphasis on the philosophical perspectives. He divides the book into two parts: Early Buddhism (I) and Later Buddhism (II). The juxtaposition of Buddha's thought and Upanisadic speculation (chapter oone) constitutes a very helpful starting point for the beginner. In subsequent chapters he deals with Epistemology, Causality, the Three Characteristics of Existence, Karma and Rebirth, Morality and Ethics, and Nirvana. Part II covers the Beginnings of Scholasticism and Mahāyāna, Theravāda, Sarvāstivāda and Sautrāntika, Mādhyamika Transcendentalism and Yogācāra Idealism. Two appendices elaborate on Metaphysics and the Buddha, and Reflections on the Relation between Early Buddhism and Zen.
- KALUPAHANA, David J.** *Causality: The Central Philosophy Of Buddhism*. Honolulu Univ Pr Of Hawaii 1975.
- This book is a scholarly description Buddhist theories of Causation, plus pre-Buddhist Vedic and non-Vedic theories. Cognate theories are discussed such as Buddhist Abhidharma "psychology," dharma, ontology, Mādhyamika, Sarvāstivāda, Sautrāntika and (some) Yogācāra. Dr. Kalupahana's sources are the Pali canon, Sanskrit and Prakrit materials and the Chinese Taishō; the Tibetan sources are omitted. Modern Buddhological studies are discussed at length.
- KAMENKA, Eugene.** *The Ethical Foundations Of Marxism*. NY Praeger 1962.
- The so-called "early Marx" comes in for sympathetic treatment from an Australian philosopher. Kamenka argues that Marx never lost his ethical vision of human dignity in future society, though "alienation" and related concepts are no longer relied upon in *Das Kapital*. Midway through the study an ethical position, based on the view that goods produce harmonious systems whereas evils cannot, is outlined and defended. Kamenka maintains that his "positive," non-normative ethic can be made compatible with a Marx purged of his eschatology and of some Hegelian trappings. The concluding stigmatization of Soviet Marxist ethics as being "normative" is perhaps the weakest part of an uneven work.
- KAMENKA, Eugene.** *The Philosophy Of Ludwig Feuerbach*. NY Praeger 1970.
- KAMIAT, A H** and Baumgardt, David and Overstreet, H A. Lamont's "Five Propositions Of Humanism". *Humanist* 2,150-151 Wint 42.

- KAMIAT, Arnold H.** *The Ethics Of Civilization.* Washington DC Public Affairs Pr 1954.
The author calls this book "a call to civilizers," by whom he means those mature individuals who are capable of contributing to "the store of civilized values." They constitute "a democratic aristocracy," for their ranks are open, without formalities, to everyone. Between this minority, however, and the majority of men there has always raged a fundamental conflict. The author attacks process-philosophies as cutting the ground from under themselves. "Every system of ideas must be built around some sort of absolute."

Art as a representation of ideal action is presented in five chapters, each devoted to a different art.
- KAMINSKY, Jack.** *Language And Ontology.* Carbondale S Illinois Univ Pr 1969.
This volume is largely a prolegomenon to a study of what the metaphysical implications of our languages are, arriving only so far as the conclusion that necessary linguistic forms do indicate what kinds of things there are. Just as Kant held that we must begin with phenomena in order to say anything about noumena, J Kaminsky holds that "we must begin with the language in order to say anything about what is extralinguistic." Along the way he comments critically on Wittgenstein (mainly the early work), Frege, Russell, Carnap, Popper, Strawson, Quine, and Geach.
- KAMINSKY, Jack.** Analytic And Synthetic Moral Judgments. *J Phil* 46,693-701 O 49.
- KAMINSKY, Jack** and Nelson, Raymond J. Scientific Statements And Statements About Humanly Created Objects. *J Phil* 55,641-647 Jl 58.
Statements of technology such as 'For every x, if x is a properly constructed relay being operated under specified conditions, then x produces an output o', are considered and it is argued that they are neither analytic nor synthetic. The sense of the consequent is not included in that of the antecedent; and a single confirmation instance suffices for *certainty*. As Dewey pointed out, such statements, neglected by philosophers of science, come from and are generalizations from practice, not from science.

- KAMINSKY, Jack.** Ontology And Language. *Phil Phenomenol Res* 23,176-191 D 62.
The purpose here is: (1) to indicate how the question of ontology enters into the construction of formal systems; (2) to show why some of the important attempts to eliminate the ontological question have not been successful; and (3) suggest a way of viewing ontological commitments that will make them seem less serious than they are usually taken to be. It is concluded, that in constructing a formal language we are committed to an ontology in the minimal sense, insofar as extensions such as classes or intensions such as properties, commit us to anything.
- KAMINSKY, Jack.** The Empirical Metaphysics Of George Henry Lewes. *J Hist Ideas* 13,314-332 Je 52.
- KAMINSKY, Jack.** What Is The Philosophic Problem? *J Phil* 47,537-544 S 50.
This article discusses the change in philosophers' roles from generalists to specialists and the implications which have arisen. The author feels the generalist philosopher, one who studies areas such as logic and language but is primarily concerned with problems of men, is what is needed. The value of philosophy is considered to be how it can address the particular things or forces which give us difficulty; that which is the real, as opposed to the ideal.

Nine essays on contemporary philosophical perspectives—pragmatism, analytic philosophy, existentialism, Freud and modern philosophy, communism, Indian philosophy, Buddhism, Chinese philosophy, and Zen—originally delivered as lectures at the University of California at Los Angeles. Since the sweep is broad, but also selective and limited, it is evident that these are not definitive studies: they are not intended as such. They are, however, informal exposition—lively, illuminating and informative. The lectures as originally presented and in their present form are intended for an intelligent lay audience.

- KAPLAN, David** and Montague, Richard and Eberle, Rolf. Hempel And Oppenheim On Explanation. *Phil Sci* 28,418-428 O 61.
The paper contains a trivialization of the article, "The Logic of Explanation" by Hempel and Oppenheim. A number of theorems are proved which show that the relation of explainability which was proposed by Hempel and Oppenheim obtains almost between any theory and any singular sentence.
- KAPLAN, David.** Explanation Revisited. *Phil Sci* 28,429-436 O 61.
- KAPLAN, Morton A.** *Justice, Human Nature, And Political Obligation.* NY Free Pr 1976.
The book shows why ethics cannot be reduced to a set of rules, why no set of rules for justice can have universal validity, argues that justice and good are reciprocal concepts that cannot be analyzed independently, and shows that they are developmental. The book continues by distinguishing between praxis and theory and showing why both are required. It also develops a concept of identification and uses Einsteinian relativity metaphorically to show that justice is neither univocal nor transitive nor equally binding on all, and that moral duty and legal responsibility are not correlative concepts, showing epistemologically why values and observational qualities have a similar ontological status.
- KAPLAN, Morton A.** *On Freedom And Human Dignity: The Importance Of The Sacred In Politics.* Morristown NJ 1973.
This book shows that the world is meaningful, that Skinnerian determinism is tautological and arid, that the sacred bond is essential to human communities and politics, that mind sets require polarities in thought, and argues that education must turn to these tasks.
- KAPLAN, Morton A.** Restricted Utilitarianism. *Ethics* 71,301-302 Jl 61.
The article demonstrates that an extreme utilitarian calculus produces undesirable results in many cases, that societies require some moral rules, and that some human relationships cannot survive instrumental calculation.

KAPLAN, Morton A. Some Problems Of The Extreme Utilitarian Position. *Ethics* 70,228-232 Ap 60.

The article demonstrates that an extreme utilitarian calculus produces undesirable results in many cases, that societies require some moral rules, and that some human relationships cannot survive instrumental calculation.

KAPLON, Morton F. *Homage To Galileo*. Cambridge 1965.

Six lectures given at the University of Rochester in 1964 in honor of the four-hundredth anniversary of the birth of Galileo. A variety of topics are covered, from Galileo's theory of measurement to the relation between science and authority in the present age. Giorgio de Santillana re-evaluates the controversy between Galileo and the Church and attempts to place Galileo's work in a new perspective, so that its truly revolutionary character can be appreciated. Gilberto Bernardini presents Galileo as the founder of modern science and the scientific outlook—arguments from Galileo's scientific practice are presented in support of this claim. Norwood Russell Hanson explores the relation between Galileo's mathematical hypotheses and his experiments. Edward W Strong discusses the relation between Galileo's views of theory and of measurement. Philip H Abelson describes the dangers inherent in government sponsorship of scientific research. And Erich Kahler distinguishes the techniques and results of scientific research from those which characterize the study of history.

KARGON, Robert. Thomas Hariot, The Northumberland Circle And Early Atomism In England. *J Hist Ideas* 27,128-136 Ja-Mr 66.

The author's thesis is that atomism, a mechanical philosophy which investigates matter and its motion, played an important historical role in the Seventeenth century, by overturning a static Aristotelian philosophy; this, in turn, laid the base for a new world view. The article asserts that Thomas Hariot and his colleagues played a critical role in promoting atomism. The author traces Hariot's life and intellectual development, and analyzes his importance for modern and contemporary philosophy.

KARIEL, Henry S. *The Decline Of American Pluralism*. Stanford CA Stanford Univ Pr 1961.

In order to sustain the dignity of the individual a two-fold pluralism has developed in America: a constitutional system of tremendously complex, diffuse, and unintegrated government; and a prodigious cluster of innumerable groups and organizations. But where constitutionalism worked toward fragmentation of power, modern technology has worked towards its consolidation producing oligarchically governed hierarchies that degrade the individual rather than sustain him. Pointing to growing government intervention in groups to support the individual, the author calls for more centralization of government power to make its intervention more effective, and to produce an egalitarian rather than hierarchical public order.

KATES, Carol A. A Critique Of Chomsky's Theory Of Grammatical Competence. *Forum Linguisticum* 1,15-24 1976.

Chomsky's rationalistic theory of grammatical competence as an *a priori* knowledge of rules is criticized on two grounds. First, it does not specify how competence "underlies" and thus "explains" speech performance. The rules are generative rather than productive, and do not dispel the "mystery" of language acquisition and performance. Secondly, grammars should be tested as part of a general theory of speech performance. Only experimental work in psycholinguistics can establish the adequacy of a model of speaking and understanding, if linguistic competence is understood in empirical terms, as the set of cognitive prerequisites for speech. Chomsky's purely formal criteria of adequacy are insufficient to establish such a theory.

KATSOFF, Louis O. Naturalism In Recent American Philosophy. *Proc Cath Phil Ass* 37,33-46 1963.

KATSOFF, L O. Lazerowitz's Verbalism. *Phil Stud* 9,17-19 1958.

The article goes into Lazerowitz's discussion of G E Moore's view of the reality of time. The author specifically takes up Lazerowitz's two arguments (a) that the statement 'time is unreal' is neither empirical nor necessary, and is therefore verbal,

and (b) that whoever asserts that time is unreal still acts in the same way others who deny it do. Concerning the second argument he contends that the fact that a person acts in such-and-such a way is not evidence for or against the proposition 'time is real (or unreal)'. He further argues "To make the bland assumption Lazerowitz does that a philosopher's behavior is an index to his beliefs seems to me even less justified than to assert that a hypocrite's behavior is a sign of his."

KATZ, Jerrold J. *Semantic Theory*. NY Harper & Row 1972.

The primary aim of Katz's work is the preliminary development of a rationalistic, intentionalist theory of semantics which demonstrates the scientific soundness of concepts such as sense, meaning, synonymy, analyticity, etc.

KATZ, Jerrold J. *The Philosophy Of Language*. NY Harper & Row 1966.

Katz presents a new approach to the philosophy of language, one based on empirical linguistics. He argues that knowledge of linguistic universals—those features which characterize all natural languages—is very important for dealing with philosophical problems about language and conceptual thinking. Katz contrasts his approach with the approaches taken by the two main groups of twentieth century philosophers of language: the logical empiricists and the ordinary-language philosophers. Katz claims that the logical empiricists have not been sufficiently empirical, because they have known little or nothing about natural languages.

KATZ, Jerrold J. *The Problem Of Induction And Its Solution*. Chicago Univ Of Chicago Pr 1962.

According to the author of this book the solution to the problem of induction is that there is no solution. Katz presents all the substantial arguments that have been used against the inductive process, e.g., its circularity, its uselessness if we assume an infinite universe, as well as its dependence upon a presupposition of regularities. He also discusses the simplicity and convergence criteria and finds them to be inadequate for justifying induction. He then shows that the inductive problem has not been solved by any contemporary philosopher.

KATZ, Jerrold J. *The Underlying Reality Of Language And Its Philosophical Import*. NY Harper & Row 1971.

KATZ, Jerrold J and Fodor, Jerry A. The Availability Of What We Say. *Phil Rev* 72,57-71 Ja 63.

Fodor and Katz criticize Cavell's position on the relation between ordinary language philosophy and empirical investigations of ordinary language, in "Must We Mean What We Say?" *Inquiry*, Volume 1, Pages 172-212, and "The Availability of Wittgenstein's Later Philosophy," *Philosophical Review*, Volume 71, Pages 67-93. Cavell holds that disagreements between ordinary language philosophers over grammar and semantics are in no sense empirical. Fodor and Katz show that ordinary language philosophers are engaged in empirical investigation.

KATZ, Jerrold J and Langendoen, Terence. Pragmatics And Presupposition. *Language* 52,1-17 Mr 76.

This paper examines the claim that the only adequate account of presupposition in natural language must be a contextual one, and that a purely semantic account of this notion is inadequate. We contend that exactly the opposite is the case: there is an adequate semantic account of presupposition in natural language, so that contextual accounts of this notion are unnecessary.

KATZ, Jerrold J and Postal, Paul M. *An Integrated Theory Of Linguistic Descriptions*. Cambridge MA MIT Pr 1964.

This book is primarily a technical study in linguistics in which the authors use some of the techniques of Chomsky to give a linguistic description of a natural language.

KATZ, Jerrold J. Semantic Theory And The Meaning Of 'Good'. *J Phil* 61,739-766 D 64.

This paper concerns itself with formulating the meaning of the English word "good"

within the framework of a semantic theory of the sort described in "The Structure of a Semantic Theory." A general introduction to this type of semantic theory is given, and then a dictionary entry for "good" is presented. Once the question of empirical adequacy is settled, I turn to some of the philosophical consequences of accepting this entry for "good." I consider the question of whether some other kinds of semantic theories can handle the facts about the meaning of "good" and argue that they cannot. Thus, evidence is put forth against a number of popular conceptions of the theory of meaning. I also consider some consequences for Moore's discussion of "good" and for Vendler's recent treatment of Moore's notions. My whole treatment is motivated by the desire to show that the application of theories from linguistics to philosophical problems can lead to genuine philosophical results.

KATZ, Jerrold J. The Relevance Of Linguistics To Philosophy. *J Phil* 62,590-601 O 65. Katz defends the relevance of linguistics to philosophy on the grounds that linguistic theory incorporates solutions to significant philosophical problems. He does so by trying to show that a number of philosophical problems can be represented as questions about the nature of language and therefore can be solved by conceptual constructs found in linguistic theory.

KATZ, Joseph. *Plotinus' Search For The Good*. NY King's Crown Pr 1950.

The purpose of the book, states the author, is to penetrate behind Plotinus' statements to the problems that faced his philosophy. The book is less concerned with the interrelation of his ideas and the architecture of his system than with the experiential reference of his ideas. It treats Plotinus' dialectic less for its own sake than to show its function in bridging the inevitable inconsistencies that arise when valuatinal and existential considerations are not clearly distinguished. The author thus deviates from the usual approach to Plotinus, and in so doing provides a worthwhile and original contribution to this field.

KAUFMAN, Arnold S. Ability. *J Phil* 60,537-550 S 63.

One of the ways we typically try to absolve a person from moral responsibility for some action is by claiming that he lacked some ability. The aim of this paper is to analyze the concept of "ability" as it figures in situations in which someone's inability is claimed to exempt him from culpability. The ultimate concern is to be clear about concepts crucial to an adequate theory of moral responsibility. The ways in which the proposed analysis bears upon such a theory are outlined.

KAUFMANN, Fritz. *Thomas Mann: The World As Will And Representation*. Boston Beacon Pr 1957.

The author analyzes Mann's novels and short stories in the light of his religious beliefs. Central to these beliefs is a distinction between nature and spirit. The former is doomed to sterility and corruption; the latter is the source of freedom and creativity. Men can choose to express themselves spiritually by relating their work to the whole cosmic and human enterprise and by doing so with the religious conviction that both the whole and the self are interrelated and of value. The author relates Mann's theories to various German philosophies and to various Protestant theologies.

Kant, Marx, Sartre, and Rawls, among others, are subjects of brief but illuminating criticism. Solzhenitsyn, a prominent contemporary manifests the new integrity which the book advocates (a life combining intellectual virtues with the four cardinal moral virtues of honesty, love, courage and ambition).

KAUFMANN, Walter A. The Hegel Myth And Its Method. *Phil Rev* 60,459-486 O 51.

KAUFMANN, Walter. *Critique Of Religion And Philosophy*. NY Harper 1958.

Kaufmann's book is a philosophy of religion. Particularly in its middle portions it is a criticism of all Christian theology from Jesus to present day Protestantism (Bultmann, Tillich, Reinhold Niebuhr). It is a criticism of the theologians' idea of "God"; the word itself has no unambiguous meaning (as T H Bradley put it, "God is riddled with contradictions"). Particularly reprehensible are the moral doctrines of Christianity, with the ugly doctrine of "hell." But in general religion is not objective truth. The Buddhists and the Hebrew Prophets have had something to say, so there is some good in religion.

Let LC be the following position: just as there is a relation between actually uttered indicative sentences which can be defined in terms of the relation of entailment between indicative sentences themselves, so also there is a relation between actually uttered imperative sentences which can be defined on the relation of entailment between imperative sentences themselves. Now LC clearly depends on the acceptability of the following position: there can be an entailment-relation between imperative sentences. This is rejected not as unsubstantiated but as incomprehensible. On the other hand the view that there is a pragmatic relation holding between actually uttered commands is accepted. This is to some extent parallel to the relation which holds between actually asserted statements, but unlike the latter it is defined not on entailment but on a so far unexplored relation of inclusion between actions.

KEENEY, Ralph L and Raiffa, Howard. *Decisions With Multiple Objectives: Preferences And Value Tradeoffs.* NY Wiley 1976.

This book is an attempt to develop a science for multiple objective decision making. The authors show how the decision maker can systematically resolve choices between uncommensurable objectives. They illustrate the theory by many concrete examples taken from a host of disciplines. They give special attention to the value or preference aspects involved in decision analysis. The book is divided into four main categories: (1) the structuring of multi-objective problems, (2) the theory (based on the utility theory of von Neuman-Morgenstern) of quantifying preferences over multiple objectives, (3) the application of that theory, and (4) special topics, an examination of preferences over time and of aggregation of individual preferences.

KEETON, Morris. *Values Men Live By: An Invitation To Religious Inquiry.* Nashville Abingdon Pr 1960.

Each of fourteen chapters is devoted to a different religious or moral question: "issues which my students have found genuine and significant." Among the topics considered are comparisons of different religions, violence and non-violence, moral relativism, ritual, prayer, and science and religion. The author, who describes himself as a "naturalistic theist," draws his materials from philosophy, religion, literature and the social sciences. Each chapter is built around a "theme question" and is followed by lists of "Audio-Visual Materials," Readings, and Further Discussion Questions. The book is intended for college use, but also for the non-academic, non-religious inquirer.

KEISLER, H J and Chang, C C. *Continuous Model Theory.* Princeton NJ Princeton Univ Pr 1966.

This monograph is the first really systematic study of the model theory (semantics) of many-valued logic. The first three chapters are concerned with preliminaries on topology, model theory, and continuous logic. The next chapter examines the relation of elementary equivalence among models, including the downward Skolem-Löwenheim theorem; the fifth chapter contains the generalizations of such classical results as the compactness and upward S-L theorems. The authors specialize their work in the sixth chapter to consider certain particular kinds of models: saturated models, universal models. The last chapter considers classes of models closed under various algebraic operations.

KEITH, Arthur. *Evolution And Ethics.* NY Putnam's 1947.

KEKES, John. *A Justification Of Rationality.* Albany NY SUNY Pr 1976.

For Kekes the two central problems of a theory of rationality are 1) the construction of a sound argument against scepticism, and 2) defense of the claim that rationality requires a justification. Part One states the broad sceptical challenge and argues that this challenge is one which cannot be ignored. Part Two argues that the standard philosophical arguments fail to refute scepticism, and has chapters devoted to Carnap, Moore, variations on the ordinary-language theme, Popper, and Winch's argument that the sceptical challenge is illegitimate. The third part offers a theory of rationality whose introductory chapter argues for three primary requirements of any such theory, to each of which the author devotes a successive chapter.

KELEHER, James F. *Disputed Questions In Philosophy.* NY Philosophical Lib 1965.

This is an effort to reconsider the basic problems of epistemic, speculative, social, and political philosophy, in the light of the currently acceptable findings of the various empirical sciences. Also, in some cases, new resolutions are proposed for purely philosophical issues, insofar as this seems practicable to the author. Both partisanship and mere polemic, it is hoped, have been avoided. The continuity of philosophic inquiry, rather than the dead-end conclusions of the anti-metaphysical thinkers, is a fundamental assumption of the book. It is proposed that logical problems be left to the professed logicians, and that philosophy be maintained as valid in its own right, and as having its own distinctive discipline. Neither the makers of systems, nor the spoilers, are accepted or rejected on their own terms.

KELLENBERGER, James. *Religious Discovery, Faith, And Knowledge.* Englewood Cliffs NJ Prentice-Hall 1972.

This book examines the possibility of a religious discovery of God, the nature of faith, and the relation of faith to knowledge. A main thesis is that a nonhypothetical model of discovery is applicable to religion and some forms of religious experience. The logic of such a discovery is explored. Whether a discovery of this type has taken place, it is argued, does not turn on deductive rigor or investigative thoroughness, but on the presence of the blindness caused by self-deception. Several proposed relationships between faith and knowledge are treated, and it is argued that a believer can both know and have faith.

KELLING, George W. *Language: Mirror, Tool, And Weapon.* Chicago Nelson-Hall 1975.

Kelling's book deals with the relationship of language to behavior, thought, culture, personality, philosophy and politics. Kelling builds on the work of Ossorio, Brown, Haley, Whorf and Wittgenstein. Chapter one defines terms. Two presents and evaluates the Whorfian hypothesis. Three discusses the relationship of simple cognitive tasks and language. Four relates culture to vocabulary. Five concerns meaning (semantic differential); six naming behavior; seven style; and eight explanation. A recurring theme is the methodology and role of the social sciences in view of the epistemological complications introduced by our use of language and its influence on us.

- KELLY, Derek A.** *Apíthmos: Toward A Neo-Pythagoreanism.* *Phil Res Anal* 1,2-4 Sum 76.
Like Plato, Kant and Peirce, I believe systematic philosophy is architectonic. The aim of the present essay is to sketch out a possible model for a system. This model takes the form of a consideration of four number-complexes—monads, dyads, triads, and tetrads—which have been taken as designs for philosophic systems. Each complex is explored in terms of its affinity with a certain way of construing the form of awareness which inaugurates inquiry in terms of its peculiar view of philosophical reason. All four of the number-complexes are shown also to be interrelated. Thinkers used or mentioned include Hegel, Buchler, Plato, Wittgenstein, Sartre, Cusanus, Schelling, Plotinus and Popper.

- KELLY, George Armstrong.** Notes On Hegel's "Lordship And Bondage". *Rev Metaph* 19,780-802 Je 66.
Hegel's lordship and bondage is properly seen from three complementary angles: the social, the psychological, and the historical. Stressing the interactive development of the individual and the social, or the internal and the external, the author argues that the failure to read Hegel's text with close attention to shifting levels of discourse can lead to distorting conclusions. While acknowledging the value of Kojève's work, he further argues that Hegel is best understood in light of the philosophical and historical issues of his own time, rather than those of a later industrial epoch.
- KELLY, Gerald.** *Medico-moral Problems, Part V.* St Louis Cath Hosp Assoc 1955.
- KELLY, Gerald and Ford, John C.** *Contemporary Moral Theology, Volume I: Questions In Fundamental Moral Theology.* Westminster MD Newman Pr 1958.
This is the first in a projected series of works on moral theology. The authors have selected for it those questions that are fundamental in moral theology. These are discussed partly in terms of surveys of contemporary thought and partly in terms of the authors' own judgments. The authors take account of the "new approaches to moral theology," especially as they are related to "situations ethics" and "subjective imputability." On the theoretical side they include the problems of unconscious motivation and freedom; on the practical side, criminal responsibility, alcoholism, and the relation of psychiatric diagnosis to moral theology.

- KELSEN, Hans.** *Society And Nature: A Sociological Inquiry.* Chicago Univ Chicago Pr 1943.
Professor Kelsen investigates the principles and concepts which lead to what we call, today, the law of causality. In the primitive conception of nature with its prevalence of the emotional component he finds its first traces. The lack of a rational component, however, prevents primitive man from recognizing the dualism which characterizes our thinking; the dualism between society and nature representing two different methods of thinking. In the last two short chapters he shows the growth and the "bipartite character of the law of causality." Finally, he traces the development of the principle from "no punishment without guilt," to "no event without guilt, the guilt meaning the cause." Reflections on natural and social laws and the replacement of the dualism of nature and society by reality and ideology close the text.

- KEMP, J.** *Reason, Action And Morality.* NY Humanities Pr 1964.
The first part of the book examines critically the theories as to the relation between reason and morality held by Cudworth, Locke, Clarke, Hume and Kant; the second part is an independent discussion of the role of reason in moral decisions. Intuition as a criterion is unequivocally rejected, but an account is given which assigns an extensive role to reasoning while retaining a non-provable element in ethics. Probably the chief contribution is made by the chapter which distinguishes the different kinds and senses of "consistency" in practical life and moral conduct.

KENNY, A. *Action, Emotion And Will.* NY Humanities Pr 1963.

This work gives a fresh approach to the discussion of psychological phenomena in philosophical terms. Beginning with a discussion of the emotions and feelings, it works back to a theory of willing and judging. The method is analytic, and the influence of Wittgenstein and Ryle is everywhere in evidence, though in different ways: the author usually improves on what Ryle, but simply approves of what Wittgenstein, says. In the final two chapters, the theory of judgment put forward by Geach in *Mental Acts* is modified and extended to apply to acts of will, in the light of what has been said in the earlier chapters about emotions, feelings and desires.

KENNY, Anthony. Intention And Purpose. *J Phil* 63,642-651 O 66.

Like Bentham, lawyers say that a man intends those consequences of his actions which he foresees. This is not the natural concept of intention which regards desire as well as knowledge as relevant. I may get drunk, foreseeing a hangover, without getting drunk in order to get a hangover. On the natural view, a man intends the ends he sets himself and the means he chooses to those ends. Application of von Wright's distinction between results and consequences. Discussion of utilitarian reasons for the law's interest in intentions. These are such as to provide grounds for preferring the natural to the Benthamite view of intention.

KENYON, Roger A. *Existential Structures: An Analytic Enquiry.* NY Philosophical Lib 1976.

As the title indicates, the book is an analytic enquiry, largely from a linguistic perspective, of the existential structures of the world as a world of persons and the entities they "apprehend." Chapters are devoted to existential structures that are primitive (myth), formative (subjects, objects and "projects," especially God language) and axiological (justice, ethics and aesthetics).

KERFERD, G B. Recent Work On Presocratic Philosophy. *Amer Phil Quart* 2,130-140 Ap 65.

A survey of books and articles wherever published dealing with the Presocratics in the period 1953-1962. Discussions of points of detail are excluded, but otherwise the aim is to be comprehensive, and over 150 items are covered. In addition to interpretations of individual thinkers from Thales to the Sophists, an attempt is made to discern trends and distinguish major problems. Among these are (1) the use to be made of the evidence of Aristotle and Theophrastus, (2) the importance of mythical and religious ideas as sources and constituents for the thought of the Presocratics, (3) how far their thinking can be characterized as "scientific," and (4) the extent to which any genuinely philosophic themes were consciously discussed, and the dangers inherent in interpreting the Presocratics in terms of various current philosophical ideas.

KERN, Edith. *Existential Thought And Fictional Technique: Kierkegaard, Sartre, Beckett.* New Haven Yale Univ Pr 1970.

This essay deals with the effect of existentialism on the fictional techniques of Kierkegaard, Sartre and Beckett. The author shows that Kierkegaard's claim that subjectivity is the basis for truth and belief is expressed in fiction through the use of the pronoun "I." In fiction Sartre creates characters who share a fictional world. But for each of these characters, this world appears to them under a different aspect because of Sartre's concept of individual freedom and of the restrictions others place upon this freedom.

KERNER, George C. *The Revolution In Ethical Theory.* NY Oxford Univ Pr 1966.

This book is a critical discussion of recent developments in ethical theory as exemplified in the works of Moore, Stevenson, Toulmin, and Hare. The author's own prescriptions are formulated as antidotes to weaknesses he finds in their theories.

KERSCHNER, Lee R. Cybernetics And Soviet Philosophy. *Int Phil Quart* 6,270-285 Je 66.

The author argues that Cybernetics is having a more profound effect on dialectical and historical materialism than any other single science. The argument and debate reveal three general positions among Soviet philosophers. At one pole there is a group of reactionary philosophers who wish to destroy cybernetics or, failing in this, want to restrict it to a narrow role comparable to that of statistics. In the middle are moderates, prepared to accept cybernetics, but who also wish to limit its scope. They are aware of the Party's expressed interest in cybernetics, but understand and perhaps fear its philosophical significance. The ultras at the other pole are interested solely in scientific advance. Actual if not avowed positivists, they pay lip service to dialectical materialism but are not prepared to subordinate science to philosophy. For them, epistemological and ontological problems are solved by reference to scientific experimentation. The author concludes that dialectical and historical materialism will either adjust or perish, and in adjusting may, in effect, die.

KESSEN, William and Mandler, George. *The Language Of Psychology.* NY Wiley 1959.

This is a logical and empirical analysis of the language of psychology. Although primarily designed for psychologists and other behavioral scientists, it has a good deal of philosophical material. The book begins in a first section by tracing developments of the language of psychology from everyday language to explicit scientific formulations. There is a discussion of the vocabulary of psychological terms and definitions: a phenomenological language is rejected, so is strict physicalist reductionism; instead, a modified behavioral criterion is suggested. A second section deals with the connecting of terms and simple sentences into more complex scientific theories, and with induction, deduction, the nature of explanation and other philosophical issues.

KETTLER, David. *The Social And Political Thought Of Adam Ferguson.* Columbus Ohio State Univ Pr 1965.

This exposition and assessment of the moral philosophy of Adam Ferguson (a contemporary of Adam Smith and David Hume) presents it as a product of Ferguson's life and times. In Part I, the author sets forth the economic and political conditions in eighteenth-century Scotland and the central facts of Ferguson's career. The claim made in Part II for the significance of Ferguson's work is not that he was a powerful or original thinker but that he sensed the social threats posed by the developments in science, commerce, and politics of his day. His theoretical inconsistencies and confusions are said to be overshadowed by his practical insights into the emergence of problems that continue to plague modern societies: the mechanization of man resulting from preoccupation with quantitative explanations, the debasement of moral and cultural values in the course of pursuit of profit, and the gulf between governors and governed as professionals replace citizen soldiers and political amateurs.

KEYT, David. A New Interpretation Of The *Tractatus* Examined. *Phil Rev* 74,229-239 Ap 65.

According to an older interpretation of the *Tractatus*, Wittgenstein's simple objects were sense-data. James Griffin and George Pitcher have recently offered a new interpretation in which Wittgenstein's simple objects are not sense-data but things like material points. Keyt gives two arguments of his own against this new interpretation and then examines the five arguments advanced by Griffin and Pitcher, showing that some do not favor the material point interpretation, while others misinterpret Wittgenstein.

KEYT, David. Singer's Generalization Argument. *Phil Rev* 72,466-476 O 63.

Keyt criticizes Marcus Singer's "generalization argument" in *Generalization in Ethics*, the argument that "If everyone was to do that, the consequences would be disastrous (or undesirable); therefore, no one ought to do that." In this simple form it is open to counterexamples; and even after we add Singer's additional restrictions, it is still invalid.

KEYT, David. Wittgenstein's Picture Theory Of Language. *Phil Rev* 73,493-511 O 64.

The proposition "Seattle is west of Spokane" has three parts: two proper names and the predicate "is west of." The fact pictured has two: Seattle and Spokane. But the picture theory holds that there must be a one-to-one correspondence between fact and proposition. How does Wittgenstein solve this problem in the *Tractatus*? On one interpretation the fact contains a third part, a relation, corresponding to the predicate (Evans and Stenius). On another the proposition is transformed by analysis into a two-dimensional diagram, the predicate disappearing in the process (Copi and Anscombe). Both are rejected. Two new suggestions are offered: (1) The number of possible configurations of simple objects is not greater than the number concatenations of names, so no predicate is needed in elementary propositions; (2) Or the predicate can be taken as the analogue of the direction arrow on a map and not counted as a part of the proposition.

KHATCHADOURIAN, Haig. *The Concept Of Art.* NY New York Univ Pr 1971.

The author takes everyday aesthetic discourse as his analytical point of departure and tries to lay bare the everyday conceptual framework for the implications it has for the discussion of aesthetic problems. He employs Wittgenstein's concept of "family resemblances" and Austin's linguistic method to discuss such concepts as the work of art, the aims and enjoyment of art, aesthetic ascriptions, the use of aesthetic terms and a number of intricate problems in criticism. The last chapter deals with contingent relations between ordinary and other types of aesthetic value in the larger social context.

KHATCHADOURIAN, Haig. Vagueness, Meaning, And Absurdity. *Amer Phil Quart* 2,119-129 Ap 65.

The paper attempts to show, first, that vague—particularly extremely vague—statements whose vagueness is due to their containing vague words are neither true nor false, analytic or synthetic. They are also untestable in principle. With respect to putative empirical statements, this constitutes an important shortcoming of the Verifiability Principle at its best. Two main uses of "vague expression" are analyzed: (1) where vagueness is due to an expression's lacking relatively-fixed, well-defined meaning; and (2) where vagueness is due to an expressions' Being insufficiently specific in meaning. Vague statements lack precise reference, or fail to give precise information about their referent. Four main senses of "absurd" are next analyzed, and related to self-contradiction, meaninglessness, and vagueness. Finally, vague concepts and vague statements are related, showing that no precise propositions can be made from extremely vague concepts. Some precise negative, but almost no positive, propositions can be made from moderately vague concepts.

KIELKOPF, Charles F. Deduction And Intuitive Induction. *Phil Phenomenol Res* 26,379-390 Mr 66.

The goal of this paper is to present a conjecture on how we can establish synthetic but necessary truths on which non-deductive logic can be built. I give examples of a kind of truth which were called *synthetic a priori* by Wittgenstein in his *Remarks on the Foundations of Mathematics*. A typical example is: There is an E in RVER. I analyze the necessity of "There is an E in RVER." My conjecture is that we can establish a non-deductive inference from "It is an A" to "It is a B" under the following conditions. There is an empirical situation which has properties A and B and we can say that this situation would not be what it is if it had A without B with the same certainty that we can say that RVER would not be what it is if it did not contain an E. Finally, I show that these *synthetic a priori* judgments also justify deductive inference.

KILMISTER, C W. *Language, Logic And Mathematics.* NY Barnes & Noble 1967.

This book traces the development of logic from Aristotle to the present, giving primary attention to the adequacy of the logical systems and theories as foundations for mathematics. The author begins with an account of Aristotle's logic which does not do justice to the existential presuppositions that are involved; Boole's theory is presented as a correction of Aristotle's. The fundamentals of Cantor's set theory are explained, and the author shows how to construct negative integers, rational numbers and real numbers from the (positive) integers. The author then proceeds to an account of Hilbert's metamathematics and Gödel's Theorem. The book concludes with the consideration of recursive functions, Turing Machines and effectiveness.

KIM, Jaegwon and Brandt, Richard. Wants As Explanations Of Actions. *J Phil* 60,425-434 Jl 63.

The paper offers an analysis of wanting and of explanations of actions in terms of wants. It is primarily concerned to point out the extent to which the features described fit in with a conception of the explanations of actions conforming to the

inferential (deductive or inductive) and nomological patterns of scientific explanation. If the analysis is plausible, at least in basic outline, then it is one good reason for thinking that explanations of actions in terms of wants do not differ from explanations in natural science, in inferential nomological pattern.

KIM, Jaegwon. Inference, Explanation, And Prediction. *J Phil* 61,360–367 Je 64.

According to an influential but still controversial theory of explanation ("covering-law" theory as presented by Hempel and Oppenheim) an event is said to be explained if a deductive argument is constructed whose premises include general laws and whose conclusion is a statement describing that event. But any surmise about what actually is explained in reference to the event is inconclusive, for a number of reasons. Thus: (1) what we can call an explanation, a predictive or retroductive argument, is not an argument considered in an abstract way, but rather a concrete argument, given at a certain time, in a specific context, and for a specific purpose, and (2) in order to characterize and distinguish among explanatory, predictive and retroductive arguments, it is necessary to have knowledge of the features of an argument which are not purely formal or logical. The article asks what these non-logical features might be and in what way they might be relevant for a theory of explanation and prediction.

KIM, Jaegwon. On The Logical Conditions Of Deductive Explanation. *Phil Sci* 30,286–291 Jl 63.

KIM, Jaegwon. On The Psycho-Physical Identity Theory. *Amer Phil Quart* 3,227–235 Jl 66.

Part I contains critical discussion of the familiar arguments in support of the Identity Theory based on considerations of scientific simplicity; it is shown that the arguments are inadequate to support the theory vis-à-vis its rival theories. It is also shown that micro-reduction of mentalistic psychology to physical theory can be carried out without the identification of psychological events with physical events. Part II examines the argument that the Identity Theory effects an ontological simplicity or economy. The concepts of event and of event-identity are discussed, and it is shown that the identification of mental event with physical ones involves contingent identification of mental attributes with physical ones. The difficulties of such identification are discussed. The objection to the Identity Theory that mental events have no spatial location whereas physical events do is examined and rejected. Finally, the exact ontological simplicity effected by the Identity Theory is assessed; and the possibility of a "dualist materialism" is indicated.

KIM, Yong Choon. *Oriental Thought: An Introduction To The Philosophical And Religious Thought Of Asia*. Springfield IL Thomas 1973.

This brief introductory text surveys the major sources of Asian thought, divided by different countries. India (Hinduism and Buddhism), China (Confucianism, Taoism and Neo-Confucianism), Korea (Shamanism, Buddhism, Confucianism and Ch'ondogyo) and Japan (Shinto and Buddhism). The preface has some comparison between Judeo-Christian thought and Oriental thought. The approach is analytical, comparative and critical. There are footnotes and an index, but no bibliography.

KIMMELMAN, George. Max Eastman And The Aesthetic Response. *J Aes Art Crit* 2,27–36 Fall 43.

KIMMELMAN, George. The Concept Of Tragedy In Modern Criticism. *J Aes Art Crit* 4,141–160 Mr 46.

KIMPEL, Ben F. *Language And Religion, A Semantic Preface To A Philosophy Of Religion*. NY Philosophical Lib 1957.

This is a critique of the notion that religious truth is paradoxical and a defense of the factual interpretation of statements of faith.

KIMPEL, Ben. *Moral Principles In The Bible: A Study Of The Contribution Of The Bible To A Moral Philosophy*. NY Philosophical Lib 1956.

The professor of philosophy in Drew University draws mainly upon Old Testament sources for his moral principles, and submits them to the test of predicting usefully, or "enhancing the quality of life." A moral principle, he says, "is a relation between two realities: One is a type of living; and the other is a quality of life which is its correlate." A sound moral principle "may be stated as a confirmable prediction." There is a Supplementary Essay entitled "The Logic of an Empirical Moral Philosophy and Its Parallel in the Logic of Empirical Science."

KIMPEL, Ben. *The Principles Of Moral Philosophy*. NY Philosophical Lib 1960.

This is the sixth book by Ben Kimpel, but the first that is outside the area of religious philosophy. This work continues to bring linguistic analysis to the attention of the common reader. The chapters are not exclusively semantic, for the problem of what moral terms mean is subordinated to problems of making concrete decisions. Above all, the reader is guided to the conclusion that a morally responsible person acts "in a way that will contribute to human well-being."

KIMPEL, Ben. *The Symbols Of Religious Faith: A Preface To An Understanding Of The Nature Of Religion*. NY Philosophical Lib 1954.

Kimpel argues that it is "the intended role of a symbol which designates ultimate reality" that differentiates philosophical speculation and religious faith. A speculative philosophical belief about reality "is very different from an earnest effort to do all that one can to acknowledge his ultimate dependence upon it." The fundamental principle of religious symbolism is that "the reality with which man is most impressed in his life becomes for him the symbol by means of which he interprets the reality he reveres for its ultimate significance."

KIMPEL, Benjamin Franklin. *Faith And Moral Authority*. NY Philosophical Lib 1953.

KIMPEL, Benjamin Franklin. *Religious Faith, Language, And Knowledge; A Philosophical Preface To Theology*. NY Philosophical Lib 1952.

KING- FARLOW, John (ed). *The Challenge Of Religion Today: Essays On The Philosophy Of Religion*. NY Science History 1976.

The twelve contributors are anglophones, teachers of philosophy and mainly located in Ontario or Alberta. Their subjects include: the ethics of proselytizing; evil and the

goodness of God; religious experience and meaning; the existence and nature of God; and the character and meaning of faith.

KING- FARLOW, John (ed) and Shea, William R (ed). *Contemporary Issues In Political Philosophy*. NY Science History 1976.

In a variety of polemical positions on contemporary issues, the authors deal with: nationhood and the rights of individuals, the treatment deserved by Canadian native peoples, the theory and practice of male supremacy ideology, the rights of the private press, the Quebec Bill of Rights, the Marxist-Leninist theory of the rights of nations to self-determination, the similarity or dissimilarity of apes and human beings, the need to democratize the bearing and raising of children, the false ideology of male political potency, different existential ways of life under socialism, stability vs. utopia, and the definition of freedom and a free society.

KING- FARLOW, John (ed) and Shea, William R (ed). *Values And The Quality Of Life*. NY Science History 1976.

Comprised of nine essays, this valuable work is concerned with issues related to the "quality of life." The initial articles by McCall and Michalos aim at clarifying the phrase 'quality of life'. Michalos also discusses efforts to measure the quality of life. A stimulating contribution is O'Manique's "Values for Survival," an examination of ethical issues and ecological problems. L C Green discusses legal conundrums bearing on the quality of life, arguing that in the area of sexuality the law often lags behind social needs.

KING- FARLOW, John. "Could God Be Temporal": A Devil's Advocacy. *S J Phil* 1,21–28 Sum 63.

As a believer long devoted to Augustine's and Aquinas' atemporal accounts of Divine perfections, I turn and rend my earlier inferences, so as to move closer to E S Brightman, G Boas, R Taylor and Charles Hartshorne. Attention both to Scriptural descriptions and to our relevant concepts would suggest that, if God is a perfect Person, then there is nothing demeaning about construing Him as a temporal individual. Unchanging fairness, concern for persons, etc, not total changelessness will be relevant. The impersonal abstractions of Hellenistic metaphysics may require timelessness for appropriate praise, but not a perfect Person Who cares about His creatures; Who expects, is disappointed, punishes, forgives, and the Biblical like.

KING- FARLOW, John and Christensen, W N. *Faith And The Life Of Reason*. Boston Reidel 1973.

At least one model of the rational religious believer exists: primary commitment to discovering truth and acting rightly; commitment to a religion flowing from those primary ones; some degree of tentativeness about faith; searching for probability, more than certainty; Faith constituting a partly moral wager aimed at Maximizing Expected Utilities of certain kinds; a tolerant wisdom about commitments (and orderings) partly pleasing to such secular thinkers as Mill, Quine and Popper, also Aquinas, Bartley and William James; primary love for God as the Supreme Justifier of human history—God's power being treated as secondary to his goodness. (Topics include: Miracles, Is and Ought, Probability, Wagers, Proofs, Time, War).

KING- FARLOW, John and Cody, Arthur B. Dialogue Concerning The Moral Responsibility Of Robots And Retrievers. *Graduate Review Of Philosophy* 3,1–7 Spr 61.

Two philosophers, one close in approach to C A Campbell, the other much closer to Wittgenstein, discuss the implications of Soft Determinism for deciding how to assess pleasing and disagreeable 'deeds' of non-human individuals. The neo-Campbellian is convinced that our appraisal attitudes towards animals and (potential) robots indicate the falsity of Soft Determinism. His opponent argues that attention to our speech can indicate the insubstantial character of many Determinist and Libertarian theses, also the need to keep linguistic change relevant to historical needs.

KING- FARLOW, John and Rothstein, J M. The Logic Of Tyranny: A New Russian Voice. *Massachusetts Review* 5,11–26 Autumn 63.

This article analyzes and evaluates the "Free Philosophical Treatise" of the (then captive) Russian Logician A S Yesenin-Volpin. Yesenin-Volpin's attacks on Dialectical Materialism are of considerable interest. But some odd fallacies appear. For example, Yesenin-Volpin's attack on Aristotelian logic is curiously Neo-Marxist: the attack on misuses of "Tertium Non Datur" confuses Contradictories and Contraries. His critique of materialist reductionism would be strengthened by explicit reference to concepts of intentions and rules. His critique of faith possibly opposes too much scepticism to everything at once. His own faith in the moral and political value of logically reforming language will remind some of noble Positivists' optimism.

KING- FARLOW, John. Existentialism And The Humanist's Choice. *Humanist* 20,161–166 My-Je 60.

KING- FARLOW, John. Humanism: The Strongest Foundations. *Humanist* 19,42–45 Ja-F 59.

The strongest foundations for a Humanist ethic, as for a Judaeo-Christian ethic, are supplied by cognitive, indeed intuitionist beliefs. Those who try to dispense with such beliefs in favour of nebulous posturing about scientific attitudes should turn to Sartre's arguments for accepting full responsibility for all of our values.

KING- FARLOW, John. Miracles: Nowell-Smith's Analysis And Tillich's Phenomenology. *Int Phil Quart* 2,265–294 My 62.

Hume and Nowell-Smith tried to understand certain theologians' claims about miracles without attending to their bases in Aristotelian physics. This somewhat weakens their criticisms. After rejecting a "demonstrative" or "deductive" approach to miracles which results from certain (out-dated) Aristotelian beliefs about scientific reasoning, I argue for the intelligibility and rationality of a tolerant 'Good Reasons' approach to judgments about the miraculous. Some, not all, of Tillich's remarks on miracles tend to fit the latter approach which leads to an illuminating Cluster Concept of *The Miraculous* (sacred and profane).

KING-FARLOW, John. Myths Of The Given And The *Cogito* Proof. *Phil Stud* 12,49–52 1961.

If Descartes meant to offer any socially binding argument for his own existence, then he probably confused contraries and contradictories against Aristotle's explicit advice on L E M proofs. Moreover, insofar as Descartes is reasoning, he begs the question in favour of just one (Pluralist) possible concept of mind.

KING-FARLOW, John. Postscript To Mr Aune On A Wittgensteinian Dogma. *Phil Stud* 13,62–64 1962.

To provide an addition to B Aune's useful points on knowledge of one's own pain (*Philosophical Studies*, Volume 12, Number 2, pages 53ff), I argue that the Open Texture of empirical concepts like *pain* makes it quite implausible to agree with Wittgenstein that talk of *knowing*, *doubting*, etc., with regard to one's own (possible) pains is nonsense.

KING-FARLOW, John. Substance, Substratum, And Personal Identity. *Rev Metaph* 13,678–683 Je 60.

N L Wilson's famous account of *Substances without Substrata* curiously deprives us of the option of assigning personal or individual identity on the basis of a spiritual substance that can exist with or without its present body or be transferred to another body. Present philosophical fashion may endorse this exclusionary policy—but only at the unwelcome cost of scorn for too many great philosophers' proposals, and many great religions' teachings, and many Common Sense beliefs of billions of articulate humans in history. Some of Wilson's justly noted remarks are contrasted with John Locke's discussions of individuation, identity, memory and "same person"—Locke, too, is at fault, but one should not blind oneself to his contributions.

KING-FARLOW, John. The Sartrean Analysis Of Sexuality. *J Existent* 2,291–302 Wint 62.

KING-FARLOW, John. Truth Preference And Neuter Propositions. *Phil Sci* 30,53–59 Ja 63.

Tarski's later application of his famous semantic equivalence (*Snow is white*, etc.) to natural languages has unfortunate consequences. Indeed they seem to be outrageous, if we wish to describe certain philosophers' opposed metaphysical positions. Sensitivity to this problem leaves us better able to construct rival accounts of Time, Truth and the Future in semantically unpuzzling forms. Belief—that—P and Belief—that—"P"—is-true may sometimes need to be carefully distinguished.

KING-FARLOW, John. Value And "Essentialist" Fallacies. *Thomist* 21,162–170 Ap 58.

Confusions between descriptive and normative uses of "meaning," "logical," "necessary," etc, render much Ordinary Language criticism of traditional metaphysics and moral thought worthless. The related attempts to reject absolute values explicitly while deferring to them implicitly add incoherence to falsehood.

KING-FARLOW, John. The Sartrean Analysis Of Sexuality. *J Exist Psychiatry* 2,290–302 1962.

Sartre's account of human sexuality, and good psychiatry in *Being and Nothingness* is unpromising because (1) it derives from a metaphysical essentialism about psychiatry which such an existentialist should reject; (2) accepting his highly speculative (not very empirical) account of man's nature would be damaging to most people's mental health; (3) in some respects Sartre's position on sexuality resembles the most pessimistic, determinist strands in Freud's writings; (4) Sartre's account is conceptually as well as scientifically dubious. The proto-Existentialism of John Pico della Mirandola looks more promising for fresh directions in psychoanalysis.

KING, C Daly. *The States Of Human Consciousness*. New Hyde Park NY University Books 1963.

The main thesis of this work is that additional states of consciousness exist besides Sleeping and Waking. These latter states which we consider normal are actually abnormal because they are passive conditions. However, we possess the capacity to experience consciousness actively in three stages: "paradise Sleep," "Awakeness," and "Objective Consciousness."

KING, Rachel Hadley. *The Creation Of Death And Life*. NY Philosophical Lib 1970.

KING, Thomas M. *Sartre And The Sacred*. Chicago Univ Of Chicago Pr 1974.

Sketching the bifurcation between the for-itself (consciousness) and the in-itself in Sartre's phenomenological ontology, the essay focuses upon the centrality of the conception of God as an impossible synthesis of spontaneous freedom and complete being. Sartre's specific brand of "Christian atheism" deals with the nature of sanctity and religious consciousness from his own opposing standpoint in such a way as to reveal his deep understanding of alternatives to his defense of a freedom grounded in a negativity which neither God nor matter can touch. There is a long discussion of Sartre's idiosyncratic conceptions of good and evil and a concluding chapter dealing with Sartre's understanding of *praxis*. Although focusing upon the idea of the sacred in Sartre's writings, this work touches upon most of the central philosophical issues in the Sartrean corpus.

KING, Winston L. *In The Hope Of Nibbana, An Essay On Theravada Buddhist Ethics*. La Salle IL Open Court 1964.

Heavily influenced by Burmese interpretations of modern Buddhism, and under some guidance of the eminent Burmese Buddhist U Hpe Aung, King divides the book into (I) Background and (II) Application. So the book is largely concerned with Theravada Buddhist ethics.

KIRK JR, William C. *Fire In The Cosmological Speculations Of Heraclitus*. Minneapolis Burgess 1940.

This is a dissertation on the few authentic fragments and the extensive doxographical tradition concerning the Heraclitean conception of fire. "Because the doxography... presents a contaminated or distorted picture of Heracliteanism, only the *ipissima verba* of Heraclitus can safely be used to determine the teaching of Heraclitus. This is especially true in the case of fire..." Mr Kirk argues against the assumption of a "theological motivation" and interprets the conception of fire in the literal sense. The cycle of change from earth through water and air to fire is conceived as a motion which, starting in the ordered universe as "want" of fire and culminating in the state of "surfeit" as actual burning, returns in the opposite direction to its point of origin, instead of completing a full revolution.

KITELEY, Murray. The Grammars Of 'Believe'. *J Phil* 61,244-259 Ap 64.

The main purpose is to show that there are no objects of belief. The contrary view has resulted from a construction that philosophers have put on the facts of language. Five different grammars of belief-sentences are considered, in order to find the best way, grammatically, to construe such sentences. The fifth grammar argues for calling the that-clause a kind of predicate of the verb. This grammar is found to be the best, and because it is found to be the best, it is concluded that belief has no objects.

KITTRELL, Edward R. "Laissez Faire" In English Classical Economics. *J Hist Ideas* 27,610-620 O-D 66.

Changing concepts of the term "laissez-faire" are examined here, from its earliest known use in France in 1751, to the variety of interpretations given it by Nineteenth century English writers. The author then evaluates laissez-faire from the standpoint of modern economic theory. His conclusion is that Eighteenth and Nineteenth century economists cannot generally be said to have sensed the need for developing a theory of the social organization of economic activities. Accordingly, they did not realize the inadequacies of using the classical market as the sole means of determining prices.

KLAUDER, Francis J. Aspects Of The Thought Of Teilhard de Chardin. North Quincy MA Christopher 1971.

This book is a collection of essays on various aspects of the thought of Teilhard. Generally sympathetic in tone, the author draws parallels between Teilhard and such writers as Thomas Aquinas, Saint Bonaventure, Whitehead, and other Thinkers. Teilhard's central message is highlighted throughout the book. Evolution is the creature in progress towards a divine goal and, at the same time, the creative power and intelligence of God working from within His creation to the manifestation of His glory—the well-being of the universe as a whole.

KLAUDER, Francis J. The Wonder Of Intelligence: A Study Of Human Knowledge. Boston Christopher 1973.

This volume aims at integrating the Logic of Aristotle, Epistemological Realism, and modern Symbolic Logic. The book offers a precise explanation of Logic in its three operations as defined by Aristotle, whose object is the correct use of intelligence; simultaneously, it provides an extensive look at Epistemology and its various sub-categories, all of which aim to prove the reliability of intelligence. Included is a discussion and brief synopsis of Skepticism, Idealism, Empiricism, Relativism and Existentialism.

KLAUDER, Francis J. The Wonder Of Philosophy. NY Philosophical Lib nd.

This synopsis of philosophy first delineates the principal problems of each branch of philosophy—logic, epistemology, metaphysics, cosmology, rational psychology, natural theology and ethics, proposing solutions offered in these areas by St Thomas Aquinas. Next the author covers in broad outline the three periods of Western philosophic thought—ancient, medieval and modern philosophy. Finally, the work treats individual philosophers of all three periods. In alphabetical order, the thought of thirty-two philosophers is briefly summarized. There is also a selected glossary of terms as understood by Oriental, Western and Existentialist thinkers. The book concludes with a suggested philosophical synthesis for contemporary man.

KLAUDER, Francis J. The Wonder Of The Real. N Quincy MA Christopher 1973.

This book presents the basic themes of the philosophy of St Thomas. Avoiding as far as possible the intricate controversies often associated with metaphysical questions, the author highlights the responses given to the perennial inquiries of man by the great masters of scholastic thought. In a vast effort at synthesis, the book treats the traditional categories of Aristotelian metaphysics in the light of St Thomas understanding of the transcendentals, integrating their world-view with a contemporary vision of man and the world.

KLEENE, Stephen C. Mathematical Logic. NY Wiley 1967.

The author presents much of the material of his *Introduction to Metamathematics* in a form suitable for an advanced undergraduate course. The book is divided into two parts: the first deals with elementary mathematical logic and the second with the application of logic to the foundations of mathematics. Part I covers propositional calculus, predicate calculus, and predicate calculus with identity. In Part II, Turing machines are dealt with in some detail, and the presentation of incompleteness and undecidability theorems is in terms of Turing machines. The final chapter gives several important metatheorems for the predicate calculus, considering both Hilbert-type and Gentzen-type systems, and contrasting them with respect to the ease of obtaining certain results.

KLEENE, Stephen Cole. Introduction To Metamathematics. NY Van Nostrand 1952.

KLEIN, Carol. The Credo Of Maimonides. NY Philosophical Lib 1958.

Rabbi Klein seeks to present in a systematic form the philosophical and religious ideas of Maimonides (1135-1204). After showing how Maimonides erects on an Old Testament foundation a structure which seems partly Aristotelian, partly Stoic and even a little Kantian, he deals mainly with the theological ideas; and in the final chapter he discusses Maimonides' Thirteen Articles of Faith which were for him the fundamentals of Judaism.

KLEIN, David Ballin. A History Of Scientific Psychology: Its Origins And Philosophical Backgrounds. NY Basic Books 1970.

KLEIN, J Theodore. Philosophy And Depth Grammar: An Interpretation Of Wittgenstein. *Etc: Rev Gen Seman* 33,253-262 S 76.

In this article I explain how Wittgenstein's approach to language brings together two ideas one might think are opposed: the idea of depth and the idea of what is open to view. "Depth grammar," which involves language in use, is contrasted with "surface grammar," and this distinction is supported by Wittgenstein's use of imaginary language-games. Clarity is seen as the result not of insight into "essences," but as a seeing of relations among various language-games.

KLEIN, Jacob. A Commentary On Plato's Meno. Chapel Hill Univ Of N Car Pr 1965.

This commentary is divided into two parts and prefaced by a long introduction in which the author states his basic views on the character, composition, and philosophy of the dialogues, with attention to the principles underlying his interpretation. Part One, entitled "Amathia," is subdivided into seven sections, the fifth being a digression on *anamnesis* and *mnēmē* in which the author weaves into the discussion Aristotle's treatise, "On Memory and Recollection," and the meaning of related concepts such as *eikasia* and *dianoia* (which refers to the other dialogues in which they are more extensively treated, i.e., *Phaedo*, *Phaedrus*, *Philebus*, *Symposium* and *Theaetetus*). Part Two is entitled "Doxa," and concentrates on a discussion of the main issues of knowledge, the place of excellence in conduct, and the portraiture of the characters of the dialogue. A dominant feature of the analysis is the belief that the intent of the dialogue is best seen when the reader becomes a "witness," an involvement that leads him to continue the search for human excellence on his own.

KLEINZ, J P. The Theory Of Knowledge Of Hugh Of St Victor. Washington DC Cath Univ Of Amer 1944.

KLEMKE, E D (ed). Essays On Wittgenstein. Urbana 1971.

This is a collection of twenty-three essays on Wittgenstein's philosophy. Part I, on Wittgenstein and his ontology, contains familiar essays by Gustav Bergmann and Wilfrid Sellars. It contains four new essays also. Part II begins with several familiar essays on the *Investigations* and the private language issue, by Clyde Hardin, Newton Garver, William Todd, Hector-Neri Castaneda, John W Cook, Moltke S Gram, and J F M Hunter. Part III presents Barry Stroud's "Wittgenstein and Logical Necessity." It also contains three essays by Herbert Hochberg.

KLEMKE, E D (ed) and Gram, Moltke S (ed). The Ontological Turn: Studies In The Philosophy Of Gustav Bergmann. Iowa City Univ Of Iowa Pr 1974.

KLEMKE, E D. The Epistemology Of G E Moore. Evanston IL . 1969.

Klemke concentrates on Moore's epistemology with reference to Moore's early writings as well as to his later, more famous works. Moore's views on other subjects (e.g., ethics, ontology) are mentioned only insofar as they are relevant to his epistemology. Klemke's discussion is focused on several topics, all of which are central to an understanding of Moore's epistemology. These include (1) an extended examination of Moore's philosophical method, with special attention paid to his conceptions of analysis and to his appeal to common sense, (2) a discussion of knowledge and truth and finally, (3) an exposition of Moore's various views on the problems of perception, sense data and the existence of an external world.

- KLIBANSKY, Raymond** and Panofsky, Erwin and Saxl, Fritz. *Saturn And Melancholy, Studies In The History Of Natural Philosophy, Religion And Art*. NY Basic Books 1964. In Part I the views of many thinkers, including Plato, Aristotle, Galen, the Church fathers, Arabian philosophers, and Kant are explicated to show that melancholy was defined in different ways. It was described as a pathological disease, as a type of natural disposition indicative of intellectual pre-eminence or genius, as a Grace from God for the sufferings of the Holy Martyrs, as original sin, and as a sign of virtue. Parts II and III reveal the relation of the Kronos-Saturn myth to the Humoreal doctrine of melancholy. Saturn is revealed as a demon of opposites, symbolizing both good and evil. The fourth and last part is concerned primarily with an analysis of Durer's use of the Saturn-Melancholy theme in his "Melencolia I."
- KLIGER, Samuel.** Emerson And The Usable Anglo-Saxon Past. *J Hist Ideas* 16,476-493 O 55.
- KLINE, George L (ed).** *European Philosophy Today*. Chicago Quadrangle Books 1965.
- KLINE, George L.** "Changing Attitudes Toward The Individual" in *The Transformation Of Russian Society*, C E Black (ed), 606-625. Cambridge Harvard Univ Pr 1960. From 1861 until about 1906 or 1907, Russian secular thinkers exploring the problem of the individual gave much attention to a vigorous defense of individual rights and freedoms. They drew support from Kant, Nietzsche, and John Stuart Mill. At the beginning of the twentieth century, however, an opposing tendency appeared and gathered momentum: a "collectivistic anti-individualism" with its roots in Hegel and Marx. The author reviews relevant texts from numerous writers of both periods. He notes the current dominance of anti-individualism in official Soviet doctrine, and briefly considers the possibility that ethical individualism may re-emerge.
- KLINE, George L.** "Leszek Kolakowski And The Revision Of Marxism" in *European Philosophy Today*, Geo L Kline (ed), 113-156. Chicago Quadrangle Books 1965. The author examines Kolakowski's "Kantian-existentialist" revision of Marxism. He differentiates between political and philosophical revision (i.e., "critical scrutiny and doctrinal modification"); the former stresses socio-economic programs, the latter theoretical issues. Drawing a parallel distinction between ideology and philosophy, he analyzes the earlier "Kantian" and "Nietzschean" revisions of Russian Marxism. Kolakowski's "third-wave" revisionism comes close to syncretism in its attempt to reconcile an admirable stress on moral autonomy and responsibility with a rather routine socio-historical determinism, failing to develop the promising suggestion that such a determinism is "statistical" rather than strict.
- KLINE, George L.** "Philosophical Puns" in *Philosophy And The Civilizing Arts*, J P Anton And C Walton (eds), 213-235. Athens Ohio Univ Pr 1974. A pun is a "play on words of the same sound but different meaning" (Webster). A philosophical pun involves philosophically significant terms; the difference in meaning is antecedent to the punning process. Six categories, and numerous subcategories, of philosophical puns are distinguished: etymological puns, ambiguity puns, and neologistic puns are included under "semantic puns," which involve ambiguities or meaning-shifts. "Switching" puns, compositional puns, and permutational puns comprise "syntactical puns," which involve shifts in word order or parts of speech. The author claims that philosophical puns are serious in intent and that successful philosophical puns can be philosophically significant.
- KLINE, George L.** "Randall's Reinterpretation Of The Philosophies" in *Naturalism And Historical Understanding*, J P Anton (ed), 83-93. Buffalo SUNY Pr 1967. The author reviews Randall's interpretations of Descartes, Spinoza, and Leibniz, drawing upon *The Career of Philosophy* and other of Randall's works. On Randall's view, Descartes and Leibniz were primarily mathematicians, while Spinoza was totally a philosopher. Problems in Descartes' ontological dualism and "epistemological subjectivism" are discussed. Questions are raised about Randall's interpretation of Spinoza's doctrine of "ideas" and of "attributes" and his claim that Spinozism is a largely "medieval" outlook. Randall's analysis of Leibniz's thought, which stresses the philosopher's "mathematical Aristotelianism," his explanation of change and process, and his philosophical theology is found to be unobjectionable.
- KLINE, George L.** "Recent Uncensored Soviet Philosophical Writings" in *Dissent In The USSR*, R L Tokes (ed), 158-190. Baltimore Johns Hopkins Pr 1975. This book is a detailed analysis and critique of specific works by Alexander Yesenin-Volpin, Valery Chaldize, and Grigory Pomerants. Volpin and Chaldize focus on topics not treated by traditional Russian social thinkers such as the "logic" of human behavior, the structure of rights and obligations; Pomerants focuses on familiar topics such as the relation of the intelligentsia to the common people. Volpin and Chaldize write analytically, sometimes austere; Pomerants is striking and eloquent, if sometimes vague. Key concepts of all three thinkers need further clarification, but their work is of interest and value. Final question: would the relaxation of censorship initiate a Soviet move away from all systematic philosophy?
- KLINE, George L.** "Some Critical Comments On Marx's Philosophy" in *Marx And The Western World*, N Lobkowitz (ed), 419-432. Notre Dame Notre Dame Univ Pr 1967. Among post-Hegelian thinkers, Marx's "society-centeredness" contrasts with Nietzsche's "culture-centeredness" and Kierkegaard's "God-centeredness." The author discusses Marx's narrowing of Hegel's rich concept of alienation. He argues that Marx had no materialist ontology. Confusion of the terms 'material' and 'economic' is partly responsible for the widespread assumption that Marx was a materialist. Marx's stress on objectification and neglect of economic services are related to his insistence on a "producer's" rather than "consumer's" morality. His philosophical position is best characterized as a dialectical and historical "economic objectivism."
- KLINE, George L.** "The Withering Away Of The State: Philosophy And Practice" in *The Future Of Communist Society*, W Laqueur And L Labedz (eds), 63-71. NY Praeger 1962. The author examines the classical Marxist doctrine of the "withering away" of un-communist ideologies and institutions as the inevitable result of anti-capitalistic economic measures. He suggests that the base-superstructure (or "root-leaf") model for this doctrine is based on false assumptions. He reviews, with respect to their current status in doctrine and in fact, the original candidates for withering away. He concludes that the original theory stands threatened, if not invalidated. Interpreted deterministically, the theory is disproved by the non-withering of religion and the family. Interpreted voluntaristically, it has been undercut by vague and broad revisions.
- KLINE, George L.** "Whitehead In The Non-English-Speaking World" in *Process And Divinity*, W Reese And E Freeman (eds), 235-268. La Salle IL Open Court 1964. The author reviews critical works on Whitehead by European and South American commentators. He discusses works in German by Bocheński, Bubser, Martin, Metz, Müller, Paci, and Wind, in French by Béra, Cesselin, Devaux, Nédoncelle, and Wahl, in Italian by Abbagnano, Actis Perinetti, Bertolini, Carbonara, Crespi, Orsi, and Paci, in Spanish by Frondizi and Pemartin, and in Russian by Bogolomov. His review is organized in terms of specific problem areas within philosophy. He concludes with an appraisal of the degree of influence exercised by Whitehead's thought in various countries.
- KLINE, George L.** A Philosophical Critique Of Soviet Marxism. *Rev Metaph* 9,90-105 S 55.
- KLINE, George L.** Beyond Revisionism: Leszek Kolakowski's Recent Philosophical Development. *Tri Quarterly* 22,13-47 Fall 71. This book is a critical survey of Kolakowski's writings of the 1960s, in several languages, and treats such themes as the nature and function of philosophy, rationalism, positivism, and the Freudian theory of culture; the conflict—both religious and ideological—between orthodoxy and heterodoxy, Mannheim's "aetiology of knowledge," and the Engels-Lenin "theory of reflection"; individual freedom and moral responsibility, subjectivity and objectivity, the conflict of values, and the meaning of history. Kolakowski combines clarity, rigor, and common sense with impressive erudition and a keen sensitivity to metaphysical issues. He has shown himself to be a brilliant critic of culture and gives promise of becoming an important original thinker.
- KLINE, George L.** Humanities And Cosmologies: The Background Of Certain Humane Values. *Western Humanities Review* 7,95-103 1953. The author suggests that discussions of human social, political, and moral life are incomplete outside the context of a cosmological awareness. While not asserting a causal connection, he observes that a cosmic perspective tends to accompany a tolerant, unarrogant, and compassionate attitude. He documents the origin and persistence of such an awareness in the works of major philosophers and poets, including the Stoics, Montaigne, Pascal, and Spinoza, Homer, Shakespeare, Milton, the English and German Romantics, and the modern Russian Konstantin Balmont. He urges further study of works expressing a cosmological awareness, as a background for the consideration of contemporary human affairs.
- KLINE, George L.** Philosophy, Ideology, And Policy In The Soviet Union. *Review Of Politics* 26,174-190 1964. The operative difference between ideology and philosophy is that the latter, but not the former, falls when it is shown to rest on false theoretical claims. Philosophy involves constant "revision" (critical scrutiny and doctrinal modification). Changes in Marxist-Leninist ideology can be made only "from above." The author reviews developments in this ideology over the past decade in the light of Bockenski's distinction between "basic dogmas," "systematic super-structure," and "declassified doctrines." Doctrinal changes have been minor, despite an increased openness toward thinkers previously banned. Khrushchev's "social Stalinism" is seen as a reaction to the widespread "erosion" of Marxist-Leninist ideology in the Soviet Union.
- KLINE, George L.** Recent Soviet Philosophy. *Ann Amer Acad Polit Soc Sci* 303,126-138 1956. Despite an apparent post-Stalinist increase in freedom of discussion, the author sees little liberalization in the field of philosophy. He cites Soviet editorials deploring criticism of Marxist-Leninist theory, and shows that there is much propaganda and little philosophy in current "philosophical" writings. In logic and social theory he notes a post-Stalinist reversal toward more orthodox Marxist-Leninist doctrine. Theory of knowledge and ethical theory remain mixed in this doctrine. Among mathematicians and scientists he finds some fruitful philosophizing. A new interest in thinkers hitherto ignored is one hopeful sign, but in general the authoritarian atmosphere persists.
- KLINE, George L.** Socialist Legality And Communist Ethics. *Natural Law Forum* 8,21-34 1963. The Soviet social theory of the 1920's was pervasively antilegalistic, drawing support for its critique of law from Marx, Kant, and Nietzsche. Under Stalin an opposite attitude came to prevail: a new "socialist" law was declared immune to Marxist "withering away." Khrushchev's 1961 Party Program admitted that law would eventually wither away, but insisted that the norms of socialist morality will be increasingly internalized. The author examines the continuing Soviet effort to

assimilate morality to law, concluding that "Communist ethics" has become predominantly "legalistic" (cf the new laws against "social parasitism"), while "socialist legality" has become immoral (cf the 1961 introduction of capital punishment for crimes against public property).

KLINE, George L. Some Recent Reinterpretations Of Hegel's Philosophy. *Monist* 48,34-75 Ja 64.

The author examines eight studies of Hegel's thought (1958-1962): by Bakradze, Findlay, Garaudy, Grégoire, van der Meulen, Ovsyannikov, Rossi, and Seeberger. After discussing problems connected with Hegel's special senses of such key terms as 'concrete' and 'abstract', he reviews these commentaries with respect to central issues in Hegel's philosophy: the relation of "method" to "system," the role of contradiction, the nature of "dialectical" development, the relation of work to alienation, and the question of the rationality of the state and of political freedom. He also considers the commentators' responses to Hegel's view on art, religion, and the doctrine of the "end of history."

KLINE, George L. Soviet Philosophers At The Thirteenth International Philosophy Congress. *J Phil* 60,738-743 1963.

The Soviet delegation to the 1963 conference in Mexico City professed concern for a free exchange of ideas. Their papers and answers to questions, however, demonstrated no such concern. The author notes four persistent "countervailing tendencies" in recent Soviet philosophizing, citing examples of each from the conference. The Soviet philosophers were dogmatic, avoiding discussion on difficult points. They inclined toward abusiveness, often demonstrating limited knowledge of what they were criticizing. They affirmed the Soviet ban on the "peaceful coexistence" of ideologies. They boasted of the Soviet state's concern for the individual, but said nothing about capital punishment for crimes against property, introduced in 1961.

KLINE, George L. Spinoza East And West: Six Recent Studies In Spinozist Philosophy. *J Phil* 58,346-354 Je 61.

The author examines works by Zac, Sokolov, Feuer, Barstok, Kolakowski, and Hallett. In Zac he finds some vagueness and occasional misleading or unsupported statements. In Sokolov he regrets some Marxist-Leninist oversimplification, but finds the study questionable only in detail. Feuer's analysis of the economic and political climate of Spinoza's time, though marred by imprecise terminology and accompanied by an over-zealous Freudian interpretation, is still illuminating. Kolakowski's analysis is sensitive and essentially sound, though somewhat weakened by Marxist etiology. Hallett's very original study is acute and stimulating, in spite of some unclarity. The author favors a speculative approach to Spinoza's speculative doctrines.

KLINEFELTER, Donald S. D Z Phillips As Philosopher Of Religion. *J Amer Acad Relig* 42,307-325 Je 74.

I try to sort out several of the crucial concepts in Phillips' Wittgensteinian analysis of religious discourse in order to see whether he can meet several typical objections to his approach. I conclude that Phillips' method, like Wittgenstein's, suffers from a confusion of conventionalist and empiricist tendencies that needs to be cleared up before it can deal more satisfactorily with issues like the "reality" of God, religious epistemology, and the justification of religious beliefs.

KLINEFELTER, Donald S. God And Rationality: A Critique Of The Theology Of Thomas F Torrance. *Journal Of Religion* 53,117-135 Ja 73.

This critique includes a preliminary examination of Torrance's concept of "theological rationality" and its application to the relations of theology and science, theology and philosophy, theology and history, and to the "God is dead" theology of Thomas Altizer and William Hamilton. My conclusion is that Torrance's use of the notions of complementarity and objectivity in science, bipolarity and duality in philosophy, and logical levels and complex facts in history, although quite suggestive, is not sufficient to overcome his "irrational" epistemological and theological dualism.

KLINEFELTER, Donald S. The Place Of Value In A World Of Fact. *Soundings* 58,363-380 Fall 75.

This paper analyzes three recent attempts to reconceptualize the "connections between knowledge and human values" by Givretz, Kohlberg, and Polanyi, with special reference to their implications for higher education. My conclusion is that, although none of them is altogether successful in meeting Hume's challenge of all attempts to derive values from facts, each of them, nonetheless, has an important insight to contribute to contemporary attempts to prevent the university of the future from sinking "quietly and indistinguishably into the noncommittal moral stupor of the rest of the knowledge industry" (Muscatine).

KLUBAC, William. *Wilhelm Dilthey's Philosophy Of History*. NY Columbia Univ Pr 1955.

After outlining Dilthey's life and thought and what influenced them, the author points out that the philosopher's main objective was to write a "critique of historical reason" which would do for the "moral sciences" what "Kant had done for the mathematical and physical sciences," thus providing a basis for historical scholarship. But "actually his ideas were inimical to Kantian idealism. The science he envisaged

was a type of descriptive psychology." A translation of Dilthey's short paper *The Dream*, giving his typology of philosophies, is appended.

KLUBERTANZ, George P. *Habits And Virtues: A Philosophical Analysis*. NY 1965.

This book describes the connection between habits and virtues, and draws upon psychological, philosophical, educational, and social findings. The author does not ignore the data of revelation in reaching his conclusions, but he feels that his is a philosophical rather than a theological treatise in that he does not base his arguments on the facts made known through revelation. The book begins with a consideration of acquired modifications, simple and complex habits, and proceeds to virtue and vice, the cardinal virtues, and a summation.

KLUBERTANZ, George P. *Introduction To The Philosophy Of Being*. NY 1955.

This introductory textbook in Thomistic metaphysics divides the philosophy of being "taken in its full sense" into two parts, natural theology, which "deals with uncaused reality as real and as the first principle of all other reality," and introductory philosophy of being, "which starts with the real which in fact is caused, and indeed with the caused sensible real." It is this departure from immediate sense experience which distinguishes the author's treatment of his part of the whole subject.

KLUBERTANZ, George P. *St Thomas Aquinas On Analogy: A Textual Analysis And Systematic Synthesis*. Chicago Loyola Univ Pr 1960.

For years, Father Klubertanz has been directing studies of the various types of analogy recognized and used by Aquinas. This book is the culmination of these studies. It suggests that many sorts of analogy are operative in Thomism, not merely the analogy of proportionality advocated by Cajetan. Analogies that are distinguished include: reference (attribution), proportion, imitation, participation, resemblance according to priority and posteriority, causal eminence, analogy according to being but not intention, and the analogy of proper proportionality. Chapter VI: Systematic Summary, gives a more speculative and personal account of the analogy of analogies.

KLUBERTANZ, George P and Holloway, Maurice R. *Being And God: An Introduction To The Philosophy Of Being And To Natural Theology*. NY 1963.

Klubertanz, who has done a volume on metaphysics, and Holloway, a volume on natural theology, unite their efforts to produce a single text that will handle both courses in one semester. This is "not a scholarly treatise, but an introductory exposition at the college level." The following topics are treated: being, analogy, becoming, substance and accident, act and potency, the agent, transcendentals, existence of God, proofs, nature and perfections of God, knowledge and will, creation and providence, and God as the end of man.

KNIGHT, Frank H. *Intelligence And Democratic Action*. Cambridge Harvard Univ Pr 1960.

This book consists of slightly revised lectures given at the Thomas Jefferson Center for Studies in Political Economy, University of Virginia. The author begins by sorting out the roles of romanticism and rationalism in the approach to social problems; he then surveys, historically and critically, the liberation of the mind from its almost universal addiction to opposite extremist errors, in the economic order and elsewhere; and he concludes with an examination of the question, Can the mind solve the problems raised by its own liberation? In dealing with this question, without giving a dogmatic answer, he offers analyses—to be used by the reader in forming his own answer—of freedom, justice (four senses), and intelligent decision-making.

KNIGHT, Frank H. *The Rights Of Man And Natural Law* By Jacques Maritain. *Ethics* 54,124-145 Ja 44.

KNIGHT, Frank H. Abstract Economics As Absolute Ethics. *Ethics* 76,163-177 Ap 66. A defense of classical liberalism is needed, but Henry Hazlitt's in *The Foundations Of Morality* fails. Hazlitt's individualism assumes society consists of adult individual producers and ignores the family as the social and economic unit. His individualism does not allow for the restrictions on liberty which advanced societies must make because of their reliance on agency relations and because of the imbalance in power unchecked competition produces. His discussion ignores crucial features of complex societies, e.g., taxation, monopolies, political factions, rivalry, and reliance upon expertise. A greater degree of social control than Hazlitt wants is necessary to preserve a free market and social justice.

KNOX, Israel. Towards A Philosophy Of Humor. *J Phil* 48,541-547 Ag 51.

Humor is provisionally defined as, "playful chaos in a serious world." The author maintains humor is a species of liberation and develops this theme within the article.

KNOX, John. *Myth And Truth: An Essay On The Language Of Faith*. Charlottesville 1964.

These lectures rehabilitate, as against the de-mythologizers, the place, and indeed the necessity, of mythological language in the expression of religious (specifically, Christian) faith. Creation, Incarnation, Consummation are all temporal; they are properly so represented in the mythical stories of these acts of God, as they are shared and perpetuated within the believing community.

KNOX, Thomas Malcolm. *Action*. NY Humanities Pr 1968.

KNUDSON, Albert C. *The Philosophy Of War And Peace*. NY 1947.

There have been a number of rationalizations for war in the past. The argument has been that human nature is such as to make war inevitable, that man's "native pugnacity or predacity" makes war a concomitant of the survival of the fittest. The essential nature of the state makes for war in that the state's social value lies in its ability to exercise force. The beneficial nature of war is a supposition by those who see in war a biological necessity to implement Darwinism.

KOCHER, Paul H. *Christopher Marlowe: A Study Of His Thought, Learning, And Character*. Chapel Hill Univ Of N Car Pr 1946.

1945 saw two interesting studies of this dramatist. The one here under review, with its emphasis on the religious approach of the subject, is demonstrative of the tangency of literature and philosophy. After an exhaustive analysis of the famous—Richard Baines Note to the Privy Council, Kocher applies his thesis to the plays and finds there much to bolster his view that Marlowe was heir to the extant irreligion and lost no opportunity to foist his views upon his listeners and readers. A brief attempt is made to present some positive views of Marlowe, especially as to the Deity, and to place him somewhere between the current puritanism and the coming Deism.

KOCHER, Paul H. Francis Bacon On The Science Of Jurisprudence. *J Hist Ideas* 18,3-26 Ja 57.

KOCKELMANS, Joseph J (ed). *Phenomenology, The Philosophy Of Edmund Husserl And Its Interpretation*. Garden City NY Anchor Books 1967.

The purpose of this anthology is to provide an answer to the question, What is

- phenomenology? The book is divided into three parts: In the first, chapters are devoted to such topics as the phenomenological reduction, evidence, and the life-world and world-experiencing life; in the second, the relationship of Heidegger, Sartre, and Merleau-Ponty to Husserl is explored; in the third, the theme of "Phenomenology and the Science of Man" is examined in chapters devoted to such problems as phenomenology and the social sciences, the interconnections of psychology and phenomenology, and phenomenology and the human sciences.
- KOCKELMANS, Joseph J (ed).** *Philosophy Of Science: The Historical Background.* NY Free Pr 1968.
- KOCKELMANS, Joseph J (ed)** and Kiesel, Theodore J (ed). *Phenomenology And The Natural Sciences.* Evanston IL 1970.
- This book is concerned with Husserl's path to transcendental phenomenology through the sciences; the clarification of science demands a phenomenologically founded ontology of the lifeworld; indications toward a hermeneutical phenomenology.
- KOCKELMANS, Joseph J.** *A First Introduction To Husserl's Phenomenology.* Pittsburgh Duquesne Univ Pr 1967.
- In this work the author has attempted to give an accurate description of Husserl's own development with respect to phenomenology between 1887 and 1938. In addition to some pertinent biographical remarks and a characterization of Husserl's initial contact with philosophy, the book contains reflections on Husserl's first conception of phenomenology (1900-1901), his first idea of the necessity of a transcendental phenomenology (1907), and a detailed description of his 'final' conception of transcendental phenomenology (1913-1931). In addition, the book deals with the question of whether or not Husserl changed his view on transcendental phenomenology in his latest publication "Crisis." Finally, in this book an attempt is made to evaluate the importance of Husserl's work for our contemporary world.
- KOCKELMANS, Joseph J.** *Martin Heidegger: A First Introduction To His Philosophy.* Pittsburgh Duquesne Univ Pr 1965.
- In this book the author tries to introduce the reader to Heidegger's philosophy. The book contains a description of some of the basic ideas developed in *Being and Time* (1927) and an interpretation of some themes dominant in Heidegger's later works. In addition to some biographical remarks the book also contains an attempt to place Heidegger's work in its historical perspective.
- KOCKELMANS, Joseph J.** *Phenomenology And Physical Science: An Introduction To The Philosophy Of Physical Science.* Pittsburgh Duquesne Univ Pr 1966.
- In this book the author attempts to explain the proper character of physical science in the light of phenomenological philosophy. This is pursued by an analytic consideration and description of the theoretical attitude assumed by the physicist and of the intentional correlate which he tries to attain by way of this theoretical attitude. The first part of the book contains a discussion of those aspects of phenomenology that are indispensable to a proper understanding of the purpose pursued in the book. Part II is devoted to an intentional analysis of the theory of relativity, whereas the last part is concerned with reflections on the nature of physical science and its relation to philosophy.
- KOCKELMANS, Joseph J.** *The World In Science And Philosophy.* Milwaukee Bruce 1969.
- In this book the author focuses on the relationship between philosophy and science by means of a careful comparison of their respective conceptions of world. The book is not meant as a philosophy of science, but rather as an introduction to it. The basic issue examined in the book is the question of how hermeneutic phenomenology can make a positive contribution to a philosophical reflection on the empirical sciences. The main thesis defended here is that a phenomenological theory of science is fully compatible with the results of the logic, epistemology, and history of science, but finds itself in conflict with the interpretation of these results proposed by scientific realism.
- KOCKELMANS, Joseph J.** "Gestalt Psychology And Phenomenology In Gurwitsch's Conception Of Thematics" in *Life-World And Consciousness*, L Embree (ed), 263-285. Evanston IL 1972.
- The author discusses Gurwitsch's conception of the relationship between Gestalt psychology and transcendental phenomenology and its implications for a phenomenological theory concerning the organization of consciousness, and the relationships between theme, field, and margin. Special attention is given to Gurwitsch's claim that the dismissal of the constancy hypothesis by Gestalt theory contains potential phenomenological motifs.
- KOCKELMANS, Joseph J.** "Phenomenology And Psychology" in *Phenomenology And The Social Sciences*, M Natanson (ed), 225-280. Evanston IL 1973.
- In this essay, the author first describes Husserl's original conception of phenomenological psychology as a regional ontology of psychic phenomena and its relationship to empirical psychology. Then he briefly characterizes the further development of these ideas by other phenomenologists. Finally, an attempt is made to answer the question of how phenomenological psychology, understood as a descriptive and interpretative science of man, is to be related to empirical psychology and to a philosophical, hermeneutical phenomenology.
- KOCKELMANS, Joseph J.** Merleau-Ponty On Sexuality. *J Existent* 6,9-30 Fall 65.
- KOCKELMANS, Joseph J.** Toward An Interpretative Or Hermeneutic Social Science. *Grad Fac Phil J* 5,73-96 1975.
- In this article an attempt is made to distinguish three different but closely related kinds of theoretical activities in which social scientists engage when they concern themselves with the scientific investigation of social phenomena: empirical explanation and prediction, eidetic description, and interpretation. A special attempt is made to illustrate the importance of hermeneutic phenomenology (Gadamer) for the social sciences.

- KOESTENBAUM, Peter.** The Phenomenology Of Metaphysics: The Nature Of Philosophical Differences. *Phil Phenomenol Res* 19,183-197 D 58.
- The purpose of this article is to analyze the problem of metaphysical differences and to seek a pathway towards their resolution. Metaphysical conflicts have two meanings: first, systems contradict one another by accepting different and opposite ultimate principles of explanation: second, systems oppose one another by claiming various degrees of inclusiveness and coherence. It is maintained that both of these two views of metaphysical controversies are true. The author constructs a comprehensive scheme from which any possible metaphysics can be derived. There are four categories to his meta-metaphysics: the given, free choice of values, classifications, and the determinates.
- KOESTENBAUM, Peter.** The Vitality Of Death. *J Existent* 5,139-166 Fall 64.
- KOESTLER, Arthur (ed)** and Smythies, J R (ed). *Beyond Reductionism: New Perspectives In The Life Sciences, Alpbach Symposium, 1968.* NY Macmillan 1970.
- KOESTLER, Arthur.** *The Act Of Creation: A Study Of The Conscious And Unconscious Processes Of Humor, Scientific Discovery And Art.* NY Macmillan 1964.
- The burden of Koestler's mystery falls on the notion of 'bisociation', a process, act or event in which two 'frames of reference' or 'matrices' collide and are lifted up into a new creation. This fusion of two contexts governed by different codes is the archetypal creative act which the author illustrates up and down the organic hierarchy of nature, from the behavior of zygotes to their homologues in the highest insights of genius. It would be unjust to describe Koestler's painting as gray on gray—the illustrative detail is too vivid and verisimilar for that—but how much of his vast picture genuinely contributes to our knowledge of things, and how much is plausible, attractive and redundant speculation is a question difficult to answer.

- KOHN, Hans.** The Paradox Of Fichte's Nationalism. *J Hist Ideas* 10,319-343 Je 49.
- KOHN, Jacob.** *Evolution As Revelation.* NY Philosophical Lib 1963.
- To the question why God did not create a world immune to pain and suffering, the author answers, "He did," namely, the world of inanimate nature. To the question why God did not create a world "free of moral evil, immune to sin and guilt," the author answers again, "He did," namely, the world of living creatures other than man. As to the reason for the existence of evil on the level of man, he writes: "... how could anything be ethically good, how could mercy and justice and truth have the slightest moral value if their opposites were forever impossible to man?" God he describes as "the reservoir of possibility and the explanation of why there is something rather than nothing."
- KOHN, Jacob.** *The Moral Life Of Man: Its Philosophical Foundations.* NY Philosophical Lib 1956.
- The author treats moral experience under two categories: obligation and the good. The human spirit being free, according to the author's view, a man need not have faith in God or revelation to be moral. However, without God, the moral life would be inexplicable. Only a theocentric world, even without the authoritarian interpretation of revelation, can provide a factual basis for morality. The author supports his thesis throughout by numerous references to rabbinic literature.

KOLENDA, Konstantin (ed). *Insight And Vision: Essays In Philosophy In Honor Of Radoslaw Andreea Tsanoff.* San Antonio Princ Pr Trin Univ 1966.

This collection of essays is a series of papers by several American philosophers discussing a wide variety of topics: these cover various areas in which R A Tsanoff has distinguished himself. Noteworthy among them are A C Benjamin's "Philosophy and the Two Cultures," A C Garnett's "Conscience and Conscientiousness," and G Morrow's "Plato's Gods."

KOLENDA, Konstantin And Others. The Normative In The Descriptive: A Colloquium. *Rev Metaph* 10,106-121 S 56.

This article states that the notion of factual truth is not normatively neutral. The reduction of the normative to the descriptive cannot be successful because the descriptive itself contains an irreducible normative element. To be concerned about objective facts means to be concerned about the correctness of one's grasp of them. To say that something is true is to proclaim that some objective fact deserves or has a right to be recognized. To regard a fact as objective is to regard it as equally constraining assent from all possible knowers of it. The pursuit of truth (including the factual) and its communication always presupposes and makes use of norms.

KOLENDA, Konstantin. *In Defense Of Practical Reason: A Study And An Application Of Arthur Murphy's Theory.* Houston Rice Univ 1969.

Ethical language discloses reasons that determine what is worth doing or what actions are justifiable. The structure of this language is complex and includes a reference to facts, attitudes, universality, community, and moral selfhood. Recognizing the proper place of each of the applicable considerations will enable us to do justice to all relevant aspects of moral issues. The theory also shows in what ways the traditional and contemporary accounts of morality are deficient.

KOLENDA, Konstantin. *Philosophy's Journey: A Historical Introduction.* Reading MA Addison-Wesley 1974.

In this book philosophy is seen as a continuing, ongoing effort to clarify questions that have engaged the human mind ever since it began to reflect upon itself and its place in the scheme of things. The crisscrossing of related issues, contrasting with or complementing one another, characterize the entire journey of philosophy up to the present. This journey is not complete; it is transformed with each new discovery. It is always on the way, and its being is its becoming.

KOLENDA, Konstantin. *Religion Without God.* Buffalo NY Prometheus Books 1976. Religiousness is a wider phenomenon than its particular expressions embedded in traditional religious concepts and attitudes. Our mode of thinking about religions is largely determined by how we face up to our mortality, finitude. A reorientation toward the fact of death may provide us with a conception of human destiny that is essentially religious but is also free of conceptual difficulties which plague the key ideas of traditional religions: God, immortality, the problem of evil. The book is motivated by the conviction that a truly religious spirit can help bind humanity into one family.

KOLENDA, Konstantin. *The Freedom Of Reason.* San Antonio Princ Pr Trin Univ 1964. The rational capacity of man consists in structuring his life in the light of learned rules, principles, and other behavioral patterns. The significant fact about these patterns is that their range of application is not laid down once and for all but calls for exercise of judgment and decision on the part of persons who apply them. The book stresses throughout the intimate connection between freedom and reason.

KOLENDA, Konstantin. Thinking The Unthinkable: Logical Conflicts In The Traditional Concept Of God. *J Scient Stud Relig* 8,72-78 Spr 69.

The concept of God, as it has come down to us in the Hebrew-Christian tradition, suffers from insurmountable difficulties. This concept emerged not only in response to a religious need, but also to satisfy some strictly philosophical, cognitive aspirations. Unfortunately, the four basic components of this concept are logically incompatible, and this logical incompatibility lies behind the puzzles and the paradoxes which have plagued Christian theology since its inception. The word "God" is unlike any other word in the language; it is made to endure the essential disjunctive character of its components. No wonder it has been so long regarded as philosophically suspect.

KONEFSKY, Samuel J. *The Legacy Of Holmes And Brandeis: A Study In The Influence Of Ideas.* NY Macmillan 1956.

Justice Oliver Wendell Holmes and Louis D Brandeis of the United States Supreme Court are the acknowledged "old masters" of the new sociological jurisprudence of the F D Roosevelt-Truman era. Holmes was the patrician sceptic, "a positivist who was opposed to having judges use their office for positive purposes", while Brandeis was "the social scientist with a conscience," strongly committed to continued progress toward a better society.

KONOLD, Donald E. *A History Of American Medical Ethics, 1817-1942.* Madison WI State Hist Society 1962.

This book is a very brief history of the attempts of the medical profession to control itself from 1847, when the first code of ethics was developed, to 1912, when the original code was revised for the second time. Rather than entering into the details of codes, the author attempts to see the codes in terms of the "practical situations in which physicians applied ethical controls.... Ethical regulation became fundamental in the attempts of regular physicians to deal with quacks, laymen, money, and standards of proficiency." He concludes, rather grimly, that "medical leaders... invariably confounded their idealism by asserting the dubious proposition that the profession could best serve society by serving itself."

KONOPKA, Gisela. *Eduard C Lindeman And Social Work Philosophy.* Minneapolis 1958.

This book discusses the life and thought of Eduard C Lindeman (1885-1953). Part One of the book presents a biography of Lindeman. Part Two traces the development of his philosophy of social work. According to Mrs. Konopka, "Lindeman's great contribution was to point out the need for consciously learning and thinking through philosophical concepts" (page 201). Part Three advances a theory of social work influenced by Lindeman's insights. A recurrent problem for social work is the relation of values to facts. The primary values of the dignity of the individual and the responsibility of individuals to others are held to be absolute, though secondary values are subject to scientific methods. The book examines such topics central to social work as the palliative versus reformative views of social work, the definition of the needs and rights of human beings, the theory of "adjustment," the relation of social work methods to value systems, the relation of self-determination to planning, the relation of social work to other professions. A bibliography is appended.

KOPNIN, P V. Dialectical Materialism And Metaphysics. *Int Phil Quart* 6,33-44 Mr 66.

Summing up the main points covered in his article the author writes: "In contrast to the various systems of metaphysics of the past and present, dialectical materialism (1) sets before itself the task of discovering the laws and forms of being, of objective reality, not in some special speculative-metaphysical way, but by means of modern scientific knowledge, by generalizing scientific data; (2) considers being in its relation to thinking, fulfilling the functions both of ontology and gnosiology; (3) proceeds from the identity, the coincidence in content of the laws of thought and those of being, acting as logic establishing the universal method and forms of the motion of thought towards objective truth; (4) treats being and its forms not simply contemplatively, but as the object of perceptual-material, revolutionary-critical practical activity of man."

KOREN, Henry J. *Marx And The Authentic Man: A First Introduction To The Philosophy Of Karl Marx.* Pittsburgh Duquesne Univ Pr 1967.

"In contemporary terms" the essentials of Marx's philosophy of history are set forth here: man as the self-realizing being who develops dialectically in and "at" the world through work and coexistence determined by an economic structure; the emergence of self-estrangement and inauthentic existence in the economic, social, juridical, political, philosophical, and religious spheres; and the coming of the new authentic man through communism. Many shortcomings and ambiguities are posed in Marx's thought, alongside of specific acknowledgements of Marx's philosophy's "lasting value for the whole of mankind." Marx was "fundamentally inspired" by the love of man which is now "a universal dimension of civilized mankind." "Because of this common driving force, the basic possibility exists that, at the least on the practical level, communism and the non-communist West can cooperate in

bringing about international social structures which can secure a life worthy of man to all mankind."

KOURANY, Janet A. Memory. *J Phil* 62,387-397 Ag 65.

I attempt, in this paper, to offer a new reason for a belief in memory, in the form of a demonstration of the necessity of its existence for an explanation of present experience. Beginning with a consideration of issues concerned with the nature of events, the present, and, in particular, the relation of the present to the occurrence of an event perceptually involving change, it is found that the last can be adequately

described only by analysis of the event into a series of "static situations" whose consecutive occurrence is perceived during the series of times consecutively characterized as "now." Consequently, for the observer to comprehend that some temporally finite continuous process of change is occurring, he must relate each individually-perceived static situation with those preceding and succeeding it, a feat which necessitates, with his present observation of some one static situation of the event, his memory of previous, temporally-ordered observations.

KOVACH, Francis J (ed) and Shahan, Robert W (ed). *Bonaventure And Aquinas: Enduring Philosophers*. Norman 1976.

Three articles treat the thought of Bonaventure: Ewart Cousins studies knowledge through subjectivity, the dynamic nature of God, and divine immanence and transcendence; J F Quinn develops the ethics of virtue in Bonaventure; and the meaning and influence of the Bonaventuran theory of spiritual light are expounded by Ignatius Brady. Two articles concentrate on Aquinas: that God is being in its highest signification is explained by Joseph Owens; and the modernity of Thomistic ethics is discussed by Robert Kreyche. Finally three writers compare Bonaventuran and Thomistic theories of knowledge, divine infinity and the possible eternity of creation.

KOVACH, Francis J. Aesthetic Subjectivism And Pre-Modern Philosophy. *Proc Cath Phil Ass* 40,209-215 1966.

KOVACH, Francis Joseph. *Philosophy Of Beauty*. Norman 1974.

This book is an explanation and defense of aesthetic objectivism in Western philosophy against contemporary attacks and a reminder of the heritage and wisdom of past aesthetic objectivists, especially those in the Middle Ages. Various historical positions on beauty and its elusiveness are considered. These differing views necessitate an examination of aesthetic methods and the aesthetic method is defined. This definition leads to an historical and doctrinal division of beauty and its two absolute consequences. Finally, the history of the aesthetic experience is examined logically.

KOYRÉ, Alexandre. *From The Closed World To The Infinite Universe*. Baltimore Johns Hopkins Pr 1957.

This volume is an expansion of the author's Naguchi Lecture, delivered in 1953. Two fundamental and revolutionary ideas of seventeenth century science are examined: "the destruction of the cosmos" and "the geometrization of space." These principles imply the replacement of the concept of a finite, well-ordered world by the theory of an infinitely extended universe, unified only by its ultimate and basic components. The history and interpretation of these principles is illustrated by the writings of philosophers and scientists from Nicholas of Cusa and Giordano Bruno to Newton and Leibniz.

KRAFT, William F. *A Psychology Of Nothingness*. Philadelphia Westminster Pr 1974.

The thesis of the book is that "an authentic person discovers and becomes himself in and through the life process of nothingness." A positive reaction to the essential experience of nothingness, as felt in loneliness, depression, anxiety, guilt, frustration, anger, boredom, apathy, and anguish, can be one, but a necessary, way that "leads

a person to self-identity, to his place and pace in life, and to his destiny." The author analyzes the moments of nothingness in the critical times of life: early adolescence, young adulthood, adulthood, middle age, and old age—ending his study by offering "a new psychological look" at dying and death, since it is the clearest indication of nothingness. It is based on the author's contention that death and dying, like living, is a social responsibility, whereby the living are asked to live and love more deeply, for "without love death is annihilation; in love death is a painful celebration."

KRAMER, Martin and Kading, Daniel. Mr Hospers' Defense Of Impersonal Egoism. *Phil Stud* 15,44–45 1964.

The article goes into John Hospers' position that a form of egoism which Hospers calls "impersonal" might be held without inconsistency. According to Hospers, "The impersonal egoist is one who says that the duty of each and every person (including himself) is to pursue his own interest exclusively." The authors point out that Hospers is suggesting that the impersonal egoist avoids inconsistency by favoring everyone's trying to win rather than everyone's winning, and that he is successful only by resisting any attempt to justify "trying." But, they argue, in such a view success or failure becomes irrelevant for the "egoist," which raises the question of whether he is an egoist at all.

KRAUSSER, Peter. A Theory Of The Evolution, History, And Structure Of The Human Conscience. *Monist* 47,506–527 Sum 63.

It is in light of the fact that developments in our moral culture and intelligence are not keeping pace with those in the technical and theoretical sciences that the author raises the question of the evolution, history and structure of conscience. He attempts to support the "conjecture" that the development of a group of formal rules for inter-personal behavior represents a unique stage in the history of conscience—the stage at which we are now. The real age of conscience has only just dawned. It is our responsibility to see that, by promoting the required education as far as possible, it does not fail us unnecessarily.

KRESS, Paul F. Self, System, And Significance: Reflections On Professor Easton's Political Science. *Ethics* 77,1–13 O 66.

This essay sets forth and questions the political science of David Easton, its application of systems theory to politics and the belief that systems analysis is a potentially complete conceptual framework. It compares Easton's thought with that of C P Snow in order to construct an analogy between the "loss of the self" depicted in 20th century literature and art and Easton's systems analysis. Easton's solution to the boundary and the units problem—the concepts, respectively, of system and interaction—are criticized in the light of this analogy, particularly with regard to Snow's notion of "causal psychological insight."

KRESS, Robert. *Whither Womanhood: The Humanity Of Women*. St Meinrad IN Abbey Pr 1975.

The question of the humanity of women, their dignity, status and role in the world, is not only practical or anthropological, not only sociological or psychological, it is a question of being itself. Nowhere else is the difficulty of reconciling unity and diversity more critical than in the bisexual dimensions of the one humanity. With special reference to Greek philosophy and Judeo-Christian religion, the roots and causes of the contemporary situation of women in Western civilization are laid bare. Special attention is given to medieval and modern philosophers. The inter-relationship of philosophy and religion in establishing general cultural suppositions and corresponding practices is a leitmotif of the book.

KRETZMANN, Norman. Inward Principles As Determinants Of Moral Worth. *J Phil* 60,263–271 My 63.

The inward-principles theory consists of two theses: (1) an agent's inward principles of action are the necessary and sufficient determinants of moral worth in every case, and (2) an agent's inward principles of action are inaccessible publicly, one reason this theory is important is that it denies public determinability of moral worth. Two varieties of empiricist theories are evaluated on the basis of their relative success in avoiding or refuting this theory, and both are rejected. The flaw they have in common is acceptance of Privileged Access, whose influence has given rise to aberrant attempts to preserve public determinability at the expense of moral relevance.

KRETZMANN, Norman. Omniscience And Immutability. *J Phil* 63,409–420 J1 66.

The author maintains that omniscience and immutability, long recognized as necessary characteristics of an absolutely perfect being, are incompatible. He presents an argument that turns on the incompatibility: (1) A perfect being is not subject to change; (2) A perfect being knows everything; (3) A being that knows everything always knows what time it is; (4) A being that always knows what time it is is subject to change. . . (5) A perfect being is subject to change; . . (6) A perfect being is not a perfect being; . . (7) There is no perfect being. The bulk of the paper consists of a discussion and rebuttal of seven objections against the premises of this argument. In a brief concluding section the author claims to show that "the doctrine that God knows everything is incompatible also with theism, the doctrine of a personal God distinct from other persons."

KREYCHE, R J. *The Betrayal Of Wisdom And The Challenge To Philosophy Today*. NY Alba House 1972.

This book contains a personal statement that will be useful to those untutored in technical philosophy and whose thesis has been and can be debated with profit by the philosophic profession. The author challenges the spirit of modern philosophy—particularly in its more technical incarnations as well as in its "scepticism" and "secularism"—in the name of "integral realism." The latter is his attempt to re-integrate modern experience and classical categories of thought, e.g., reason, objective realism. While argumentative in style, the book is a responsible restatement of a traditional position. A brief selective bibliography is included.

KREYCHE, Robert J. *God And Contemporary Man: Reflections Of A Christian Philosopher*. Milwaukee Bruce 1965.

The author amkes the point, first made by Etienne Gilson, that a Christian philosopher is something more than one who happens to be a Christian. His philosophy can never be separated from his Christian faith, with the result that his philosophical analysis is always informed by the social and personal concerns of the Christian community. Kreyche believes that such an alliance makes modern man recognize the need for "commitment." In this way, the social role of the philosopher is emphasized.

KREYCHE, Robert J. *God And Reality: An Introduction To The Philosophy Of God*. NY 1965.

KRIEGER, Leonard. *The German Idea Of Freedom; History Of A Political Tradition*. Boston Beacon Pr 1957.

Through a careful historical study, starting with the rise of the German territorial states at the time of the Protestant Reformation, through the period of the French Revolution and its aftermath, to the social movements which arose in the 1830's, the author tries to answer three questions: 1) Was the German failure to achieve a "liberal democracy" due simply to the triumph of conservatism over "generic liberalism" or also to a peculiar German attitude toward liberty? 2) If there was such an attitude what were its ingredients? 3) And, finally, given the ingredients of a special German approach to the problems of political freedom, why did that strange historical development occur and remain constant in spite of changing conditions?

KRIEGER, Leonard. *The Politics Of Discretion: Pufendorf And The Acceptance Of Natural Law*. Chicago Univ Of Chicago Pr 1965.

An intellectual biography of Samuel Pufendorf as well as an essay in intellectual history. It divides his career into stages, summarizes and interprets the writings of each, and constantly relates the man to his age. Pufendorf adopted the method of rationalism but adapted it so that general principles would connect with the particular facts of existence. His moral theory centered on natural law known by human reason but promulgated by God. In political theory he justified existing institutions by founding them on contracts legitimized by natural law. As a jurist he is best known for his contributions to international law. As a historian he found his material in original documents and his principle of interpretation in the reason of state. Finally, Pufendorf applied his rational method to Lutheran theology to provide an ultimate ground for the natural law so central to his thought.

KRIEGER, Leonard. History And Law In The Seventeenth Century: Pufendorf. *J Hist Ideas* 21,198–210 Ap–Je 60.

KRIEGER, Leonard. Kant And The Crisis In Natural Law. *J Hist Ideas* 26,191–210 Ap–Je 65.

The thesis of this article is that because the concept of natural law has had such a long, continuous history in Western thought, we need to examine more carefully its recent history. The author states that Kant's concept of natural law will be studied here because Kant presented the most explicit form of the crisis that surrounded natural law. According to the author, Kant's division of the world into natural phenomena and human action (freedom) laid the groundwork for a separation between natural and moral law. But, the author concludes, this does not mean that

Western thought has abandoned the concept; rather, it has changed simply by giving the concept new form.

KRIEGER, M. *The Tragic Vision.* NY -1960.

A sequel to his *New Apologists*, this latest work sees the "tragic vision" as the Dionysian component of tragedy, in an irreducible tension with the ethical or Apollonian: a conflict characterizing the modern "crisis-mentality" of literature and existentialism. Gide, Kafka, and Melville, are contrasted with D H Lawrence, Camus, Dostoevsky, and others in a very illuminating manner.

KRIEGER, Murray. *The New Apologists For Poetry.* Minneapolis 1956.

The main object of this study is to lay the groundwork, in contemporary terms, for a systematic and philosophically respectable "apology for poetry." The author finds that most of the so-called New Critics agree in rejecting both the "sugar-coated pill" and "l'art pour l'art" views of poetry; their efforts to formulate a workable third view form the basis for his elaboration of the requirements of an acceptable theory, one which will accord with—and do justice to—the unique and irreducible aesthetic experience to which poetry gives rise. The strength of Mr Krieger's study lies in the clarity and force with which he states the various issues, and in the scholarly care with which he examines the views of individual critics.

KRIKORIAN, Y H. The Publicity Of Mind. *Phil Phenomenol Res* 22,317-325 Mr 62.

This article opposes the tradition that considers mind as inaccessible except to its possessors, and ideas or feelings as private experiences, exclusively one's own and not known or shared by others. This type of view needs to be re-examined, for it goes counter to our normal shared experiences and communications and tends to check our pursuit of knowledge. It is concluded that mind is open to public observation, that all aspects of mind are potentially observable and that there are no "permanent unknowables." The article proceeds to discuss: a behavioristic account of mind, knowledge of other minds, and communication.

KRIKORIAN, Yervant H. *The Pursuit Of Ideals.* Springfield IL Thomas 1970.

Men are motivated by various basic drives, such as hunger and sex. But sometimes we think we act on the basis of higher ideals, e.g., truth, beauty or religious faith—ideals which, in the very nature of the case, are never fully realized in experience. Naturalistic value theories rarely do justice to these higher ideals. Y Krikorian argues, persuasively, that they can be incorporated into a naturalistic theory. As might be expected, he relies heavily on the work of Dewey, Perry, and Santayana. He is concerned to point out the part our ideals play in science, art, morality, and religion. Like Dewey, he argues that a person can lead a religious life without believing in the supernatural.

KRIMERMAN, Leonard I. Laws And Counterfactuals. *Phil Stud* 16,40-43 1965.

The article takes issue with E Nagel's analysis of laws and counterfactuals. According to Nagel counterfactual conditionals can be construed as second-order contentions, i.e., as purporting to describe certain logical relations that hold between other statements. The author holds that this analysis is incompatible with a defensible distinction which Nagel himself draws between "accidental universals" (e.g., 'All of the people in this room are blue-eyed') and scientific laws or "nomic universals" (e.g., 'Ice floats on water'). He argues that Nagel is, in effect, holding the false view that a scientific law can provide evidence for a conjunction composed in the first place of itself and in the second place of a logical appraisal statement whose truth value is independent of that possessed by the law.

KRISHNAMURTI, Jiddu. *Beyond Violence.* NY Harper & Row 1973.

KRISHNAMURTI, Jiddu. *The Awakening Of Intelligence.* NY Harper & Row 1973.

For Krishnamurti, every speculative idea, every system of thought, is further entanglement, a matter of spinning the wheels. What we usually understand by "thought," then must be among the first things to go, or at least to be seen through. What Krishnamurti calls Intelligence can arise only with the going-under of ordinary thought and its concomitant opinions, ideas, and speculations. Krishnamurti's challenge, as he expresses it, carries the flavor of the Buddhist satipatthana vipassana meditation, the cultivation of "mindfulness." His message might be viewed as a radicalization of means as means—no more than that. The guru is not really a guru, insofar as one easily gets "entangled" in his guru—or teacher or anything else.

KRISTELLER, Paul Oskar. *Eight Philosophers Of The Italian Renaissance.* Stanford CA Stanford Univ Pr 1964.

This book includes eight lectures, plus a ninth on the medieval antecedents of Renaissance humanism, concerned to emphasize the specifically philosophic achievements of the Renaissance. The book is confined to Italy to give it coherence, and to specific men to give it depth, while remaining representative of what was accomplished during the 200 years from Petrarch to Bruno.

KRISTELLER, Paul Oskar. *Renaissance Thought II: Papers On Humanism And The Arts.* NY Harper & Row 1965.

This book is a second collection of P Kristeller's articles on the Renaissance. It includes papers on Humanism; the Florentine Platonic Academy; the development of the vernacular; Renaissance music; and the origin and growth of the modern system of the arts. At the end of the first paper on *Humanist Learning* the author stresses two points: "First, as a result of Renaissance humanism, the intellectual climate had completely changed between 1300 and 1600... the second and chief lesson... in our time, the humanities are on the defensive everywhere... by contrast, we see in the Renaissance a vast body of humanities, that is, secular learning which partially, at least, is independent of practical life, of science, of religion, and of the arts, and which occupies a large and important place in the attention and initiative of the time and which is in turn capable of exerting a deep and fruitful influence on all other areas of human activity."

KRISTELLER, Paul Oskar. *The Classics And Renaissance Thought.* Cambridge Harvard Univ Pr 1955.

After a chapter on the Humanist movement as a cultural and educational program for the study and imitation of the classics, Professor Kristeller surveys the impact of Plato and Aristotle upon Renaissance thought, and concludes with a chapter on paganism and Christianity. The Renaissance acquaintance with the classics "was not merely a matter of study and of imitation, but the ideas embodied in ancient literature served as a ferment and inspiration for the original thought of the period...."

- KUHN, Thomas S.** *The Copernican Revolution; Planetary Astronomy In The Development Of Western Thought*. Cambridge Harvard Univ Pr 1957.
- The author traces the history of various astronomical theories from the time of the Babylonians to Copernicus. Copernicus is regarded as significant not for the novelty of his ideas, but for his painstaking detailed study of the mathematical consequences of the earth's motion and for fitting these consequences into an existing knowledge of the heavens. The criticisms made by Tycho Brahe and the emendation introduced by Kepler into the Copernican system are analyzed in great detail. There is also an account of the various non-astronomical objections by physicists to Copernicus, objections finally answered by Galileo and Newton; and a study of the analogies between the theories of the followers of Copernicus and the doctrines of the atomists.
- KUHN, Thomas S.** *The Structure Of Scientific Revolutions*. Chicago Univ Of Chicago Pr 1962.
- This monograph is a rather general study in the history of ideas. The argument is made that scientists, either consciously or unconsciously, work with some sort of paradigm—a general world view—which guides their inquiries. In each age, Kuhn tells us, scientists interpret the world differently so that old problems become solved and new ones are introduced. But Kuhn attempts little analysis of what a paradigm is and how it is connected to logical and scientific theories. Nor is there any examination of what "interpretation" means. Are there interpretation as well as observation sentences? If observation sentences are dependent upon the age and society in which a man lives, then are we to presume that Protagoras was right when he said that man is the measure of all things? But what of Plato's and Aristotle's arguments on this point? None of these crucial questions are discussed.
- KUHNS, R.** *The House, The City, And The Judge: The Growth Of Moral Awareness In The Oresteia*. Indianapolis Bobbs-Merrill 1962.
- Kuhns' book is a written interpretation of the *Oresteia*, interweaving the aesthetic, moral, political and cosmic elements in the drama. The author gives a valuable assessment of Aeschylus' reaction to the then current ideas of Plato and Aristotle.

- Simon insists that liberty and authority are complementary, and his explanation of how "autonomy renders authority necessary and authority renders autonomy possible" must be rated among the best in all political literature. Simon's teaching is also very useful with regard to the scope and method of political science, which he considers from the vantage point of a philosopher versed not only in logic and epistemology but also in moral philosophy and the philosophy of science. Here Simon examines value-judgments in social science and offers an original analysis of decision making, both of which he then ties to the question of the role of the philosopher in society. In short, Simon may well have given the 20th century what it seems to need the most: a political science that is both realistic and hopeful.

- KUKLICK, Bruce.** *Josiah Royce: An Intellectual Biography*. Indianapolis Bobbs-Merrill 1972.
- This study consciously seeks to avoid "intellectual history" in the traditional philosopher's approach of reconstructing the individual's philosophic arguments and placing them in the perspective of the present. He also seeks to avoid the type of "intellectual history" more current among historians who place individuals and their ideas in terms of their relation to the "mainstream" or "major tradition."—Instead Kuklick has sought to sort out the issues which led Royce to the views he defended, and to show how that defense and position was altered as the philosophic dialogue of his career unfolded. The result is an intriguing analysis of a man and a participation in philosophical dialogue. B Kuklick rightfully concentrates on Royce's serious philosophy and not on his popular philosophy which led many to identify Royce as primarily a genteel religious thinker. Royce's place in three themes shapes Kuklick's narrative: the impact of logic on philosophy; the relation between pragmatism and idealism; and the significance of Kant.

- Is the world of ordinary language the same as the life-world? This essay attempts to answer this question by examining three analysts and three phenomenologists who have dealt with "order." After considering passages from Wittgenstein, Urmson, and Hare; Gurwitsch, Schutz, and Spiegelberg, the author finds that some passages from one movement would not be out of place in essays of the other. The disagreements stem from a basic atomism on one hand and a holistic bias on the other. Neither movement appears to draw on the logic of relations, and both movements reject what the author calls "order monism." Neither provides a systematic account of how the orders distinguished from one another are related. The final point of the author is that both treatments of order seem at present incomplete, but they may be prolegomena to a new metaphysics.

- KUPPERMAN, Joel J.** Reasons In Support Of Evaluations Of Works Of Art. *Monist* 50,222-236 Ap 66.
- Critics often give reasons in support of their evaluations of works of art. Some writers have pointed out that this critical activity fulfills an important function of directing our appreciation of a work. The argument of the paper is that reasons also give evaluations logical support. Plainly the logic of this is not deductive; it also differs in important respects from familiar types of inductive logic. We can relate the logic of aesthetics to other sorts of logic by examining the conditions in which we call critics' reasons "strong" or "weak." A theory is developed which explains the strength of a reason as a function of the frequency of "exceptions" to it.

- KURTZ, Paul W (ed)** and Todorovich, Miro (ed) and Hook, Sidney (ed). *The Philosophy Of The Curriculum: The Need For General Education.* Buffalo NY Prometheus Books 1975.
- This book is an anthology representing an essentially liberal and meliorist view of educational reform. The essayists offer a critical review of the situation of the undergraduate curriculum. The essays are organized under traditional rubrics—humanities, social sciences, sciences. Critics of the curriculum from left and right, e.g., those concerned with "de-schooling" society, or with radicalizing the university, or with re-establishing essentialist education—are absent.
- KURTZ, Paul W.** Has Mr Flew Abandoned "The Logic Of Ordinary Use"? *Phil Stud* 9,73-77 1958.
- The author attempts to bring out what he sees is a shift on Flew's part away from strict

adherence to ordinary language which is found in "British philosophy." He points to Flew's willingness in a recent paper to extend and stretch motive (intention, purpose, desire, wish, etc.) far beyond what is normally meant. He asks if Flew will allow this, is not free redefinition legitimate within any language group providing the user can establish a paradigm case of use?

- KUSPIT, Donald B.** Epoché And Fable In Descartes. *Phil Phenomenol Res* 25,30-51 S 64.
- The paper deals with differences between Descartes' discovery of the *cogito ego* as science's ground of certainty and Husserl's deciphering of the *cogito ego* as the first intimation of the transcendental ego. Husserl's epoché is used to explicate Descartes' doubt via a discussion of Descartes' usage of fable. The following general conclusions are made: (1) Descartes could not possibly have conceived of intentional consciousness because he was more interested in ascertaining science; (2) a distinction is made between internal and external doubt in Descartes, the former extracting the clear and distinct, for sanity's sake, from the confused world, the latter constructing science separate from the world as a realm constituted by the extracted clear and distinct; (3) the *cogito ego* and science are never more than problematic, for Descartes is less certain about what they are than about the fact of his unclarity and indistinctness.
- KUSPIT, Donald B.** Parmenidean Tendencies In The Epoché. *Rev Metaph* 18,739-770 Je 65.
- The author asks what happens to the philosopher in his search for the radical origins of reality, and suggests there is an instructive parallel between Husserl's epoché and Parmenides' journey to the goddess as recounted in Diels' Fragment 1. He argues that epoché is above all a method of becoming a philosopher and that the perception of the world as phenomenon is the "philosophicality" necessarily prior to the genuine work of philosophy. In his attempt to be original in his relationship to reality the thinker recovers his philosophicality, that is, his basic being as a philosopher or his integrity.

- KWANT, Remy C.** *From Phenomenology To Metaphysics: An Inquiry Into The Last Period Of Merleau-Ponty's Philosophical Life.* Pittsburgh Duquesne Univ Pr 1966.
- KWANT, Remy C.** *Phenomenology Of Social Existence.* Pittsburgh Duquesne Univ Pr 1965.
- This book, previously published in Dutch, is a reflection on the social character of man's existence, a character seen as permeating all domains of individual, collective, institutional, political, and religious activity. Chapters are devoted to "The Ideology of Individualism," "The All-Encompassing Social Character of Man," "Strength and Weakness of Social Determinism," "The Person and Social Facticity," and "The Social Attitude of Mind." Kwant holds that our relationship to fellow men is inextricably bound to our lives yet is "not one of deterministic necessity nor solely a relation of dependence." The individual's activities take place in a field of meaning which includes the "facticity" of the human situation. The "person" is basic to society and has an interdependent relationship with "facticity." Meaningful personal existence is taken as the clue to the meaningful existence of Mankind.

KWANT, Remy C. *Philosophy Of Labor.* Pittsburgh Duquesne Univ 1960.

As the author points out, a philosophy of labor can be extremely helpful in illuminating the more general problems of social and political philosophy. For those who are unacquainted with the philosophic treatment of labor, especially in Marx, this discussion may be an aid.

KWANT, Remy C. *The Ambiguity Of The Fact.* *Mod Sch* 37,287-300 My 60.

KWANT, Remy G. *The Phenomenological Philosophy Of Merleau-Ponty.* Pittsburgh Duquesne Univ Pr 1963.

This volume is intended as an introduction to the philosophy of Merleau-Ponty. Although criticisms of that philosophy are suggested throughout and a concluding chapter on "Critical Considerations" is included, the work is chiefly expository. Major attention is devoted to "the body-subject," the nature of language, meaning, and philosophy of history. Chapters are included on Merleau-Ponty's relationship to Marx, Husserl, and Sartre. The author considers the "body-subject" to be the "focal point of Merleau-Ponty's philosophical reflection." He emphasizes the differences between the systematic phenomenology of Husserl, what Merleau-Ponty calls the "accursed lucidity" of Sartre, and, on the other side, the "groping character proper to Merleau-Ponty's fundamental concepts." Kwant finds two central deficiencies in his subject's thought: a neglect of the "Life of Spirit" and a failure to ask "why it is that everything lends itself to a dialogue with man." Despite these reservations, he considers Merleau-Ponty to be an important philosopher whose work contains a "very valuable vision."

KYBURG JR, H E and Salmon, W C and Barker, S F. *Symposium On Inductive Evidence.* *Amer Phil Quart* 2,265-280 O 65.

This paper attempts to undermine the following dissolution argument: To be rational is to fashion one's beliefs according to the evidence—inductive evidence is one basic type of evidence—thus, there is no question as to whether it is rational to employ induction. The problem of justification thereby evaporates. The critique rests upon the fact that, to have a viable concept of evidence, we must choose from among a wide variety of possible rules. The problem of justification is the problem of justifying such choice. The paper criticizes Carnap's view that such choice must be based upon "inductive intuition."

KYBURG JR, Henry E. *A Modest Proposal Concerning Simplicity.* *Phil Rev* 70,390-395 Jl 61.

Kyburg proposes the following test for the simplicity of a theory: the complexity of a theory is measured by the number of quantifiers that occur in the set of statements comprising the theory.

KYBURG JR, Henry E. *Demonstrative Induction.* *Phil Phenomenol Res* 21,80-92 S 60.

Arguments encountered in scientific literature are supported by reference to general empirical premises and particular statements of empirical evidence. The reasoning which proceeds from these to the inductive conclusions is often demonstrative. The purpose here is to see whether or not such demonstrative inductive arguments can ever lead to a complete justification or elucidation of induction. The forms of demonstrative inductive inference considered by Keynes, Nicod, Broad, and von Wright are discussed. It is concluded that such arguments cannot lead by themselves to a justification of induction. No genuinely inductive conclusion can be logically certain, and therefore it cannot occur as the conclusion in a demonstrative argument.

KYBURG JR, Henry Ely. *Philosophy Of Science: A Formal Approach.* NY Macmillan 1968.

KYBURG JR, Henry E. *Recent Work In Inductive Logic.* *Amer Phil Quart* 1,249-287 O 64.

This article attempts to review everything that might be of interest to inductive logicians that has occurred in the fourteen years since the publication of Carnap's *Logical Foundations of Probability*. The entire article is written from as neutral a point of view as possible, in order to be as helpful as possible to the non-specialist. The topics into which the article is divided are the following: (1) The "necessity" of inductive conclusions. (2) Induction based on factual assumptions. (3) Induction and ordinary language. (4) "Plausible implication," "degree of factual support," etc. (5) Is inductive logic self-justifying? (6) Pragmatic forms of induction. (7) The new problem of induction: "grue" and "bleen." (8) Simplicity and the acceptance of scientific hypotheses. (9) Inductive logic as a theory of logical probability. (10) The paradoxes of confirmation. (11) Subjectivistic probability. (12) The game-theoretic approach. (13) Some of the more important problems of inductive logic that have come to the fore in recent years.

KYBURG, Henry E. *Probability And The Logic Of Rational Belief.* Middletown CT Wesleyan Univ Pr 1961.

Part I of this book discusses various current views of the nature of probability, in particular the frequency theories, the personalistic theory, and logical theories that measure degree of rational belief. Part II is devoted to constructing a formal logical system, based on the use of Quine's *Mathematical Logic*, supplemented by a primitive predicate and axioms for its use. Formality is obtained by extensive use of Quine's protosyntactical techniques. Part III is devoted to practical considerations such as the analysis of contexts, induction, statistical inference, and justification.

LA CAPRA, Dominick. *Emile Durkheim: Sociologist And Philosopher.* Ithaca NY Cornell Univ Pr 1972.

Intellectual historians agree that Durkheim's work is a landmark in the history of man's unquished effort to understand himself and society. But the meaning of Durkheim's work for our time is a subject of sharp controversy among the experts, including Talcott Parsons, Georges Gurwitsch, Claude Lévi-Strauss, and Raymond Aron. LaCapra, taking cognizance of the controversy, concludes on the basis of the evidence that "Durkheim was a structural reformer selectively open to radical ideas so that one day men might be authentically conservative." In the light of that conclusion, Durkheim's life and milieu, and his struggle to discern the basic laws of *communitas*, are here recounted, with extensive summaries of his findings and theories on work, religion, fatalism, anomie, suicide, and related kinds of pervasive human transactions.

LA CROIX, Richard R. *Passmore And Cudworth On The Promise-Keeping Act.* *Graduate Review Of Philosophy* 5,19-25 Spr 63.

According to Ralph Cudworth, it follows from his general principle (i.e., things are what they are, not by will but by nature) that things like promise-keeping and law-abidingness are naturally good or obligatory while things like writing a letter or going to the store are naturally morally indifferent. But J A Passmore formulates two arguments which he thinks point out an inconsistency in Cudworth's ethical theory. I analyze Passmore's two arguments and argue that they fail to constitute an adequate criticism of Cudworth's ethical system.

LACEY, A R. *Is Life A Dream?* *Rev Metaph* 14,433-451 Mr 61.

The author addresses the question how one knows he is not now dreaming. After discussing the thesis that dreams are copies of reality, he formulates objections to the views that dreams are unanalyzable in terms of happenings and that dreams are entirely constituted by our "memories" of them. Then, examining what is implied by the assertion that one is dreaming, he discusses what would count as awakening into a real world. The author concludes that the existence of a coherent "superworld," not spatiotemporally related to earth, into which one might awaken is at least a meaningful possibility.

LACHS, John. Epiphenomenalism And The Notion Of Cause. *J Phil* 60,141–145 Mr 63.

The impossibility of rendering its view of the body—dependence of mind in terms of any of the major theories of the nature of causation need not betoken the total collapse of epiphenomenalism. It is proposed that, following Aristotle, the epiphenomenalist interpret the mind as the form of the body. He could then construe the difference between mental acts and physical change in terms of the distinction between activity and process. This attempt to fit the emergence of epiphenomenal mind into a larger conceptual frame leaves room for the necessary ontological commitments of the epiphenomenalist and frees him of the egregious task of dealing with effectless effects.

LACHS, John. Experience. *S J Phil* 3,10–17 Spr 65.

LACHS, John. Santayana's Moral Philosophy. *J Phil* 61,44–60 Ja 64.

Santayana never developed a systematic and comprehensive moral philosophy, and in the absence thereof this paper endeavors to develop and enlarge upon the ethical position that is the natural complement of his ontology. Among the problematic questions of ethics to which this position implies answers are: 'What ought I to do?' 'How can interest in a good itself be good?' 'How can desire for a good itself be bad?' These answers are discussed. Points of agreement and disagreement between Santayana's position and those of G E Moore, emotivism, egoism, and hedonism are also briefly discussed.

LACHS, John. Santayana's Philosophy Of Mind. *Monist* 48,419–440 Jl 64.

This article is a systematic exposition and critical assessment of Santayana's view of the nature of consciousness and its relation to the animal organism. The stream of awareness which constitutes a mind consists of intentional acts directed upon essences. Intent transforms the contemplation of essence into symbolic cognition of the physical world. Even though mental acts depend for their existence and properties on changes in the animal organism, Santayana is reluctant to render this dependence in simple causal terms. Instead, he construes the distinction between body and mind in terms of the distinction between process and activity in the Aristotelian sense, and maintains that the particulars of the generation of consciousness—as of all generation—are closed to inspection by the mind.

LACHS, John. Self-Identity Without A Self. *Rev Metaph* 18,548–565 Mr 65.

Paul Weiss' dialectical method calls for the provision of that which will complete the given. In order to demonstrate the weakness of this philosophical procedure, the author questions Weiss' postulation of an enduring self. He first argues that contrary to Weiss' position self-evaluation, self-discipline, and ethical or legal responsibility need not presuppose an underlying self. He then offers two interpretations of Weiss' views on self-identity and examines Weiss' notions of concern for the good, power, and immortality. Finally, focusing on Weiss' concept of expression, he criticizes his account of the relations among self, body, and mind.

LACHS, John. The Impotent Mind. *Rev Metaph* 17,187–199 D 63.

The author undertakes to show that epiphenomenalism cannot be conclusively refuted. He defines epiphenomenalism as a theory consisting of the propositions that every mental event has as its total cause one or a set of physical processes and that no mental event is a total or partial cause of any physical process. He then examines three groups of arguments against this position: arguments which hold that the facts of experience suffice to disprove the epiphenomenalist theory, arguments ascribing efficacy to consciousness, and J B Pratt's argument that awareness of logical relations plays a causal role in inference.

LADD, John. *The Structure Of A Moral Code, A Philosophical Analysis Of Ethical Discourse Applied To The Ethics Of The Navaho Indians*. Cambridge Harvard Univ Pr 1957.

This work treats the problems involved in describing the ethics of another society besides the author's and raises the question whether moral prescriptions are culturally relative or universal. In Part I, Ladd claims that the subject matter of descriptive ethics is ethical discourse and that the method to be employed is the method of "hypothetical construction," i.e., the discovery of some ethical system which can serve as a model for explaining the statements of its proponents. In Part II he examines the nature of ethical systems in general, ethical reasoning, prescriptive statements, the

logic of ethical inference, and the pragmatic conditions of ethical argumentation. Part III consists of an application of this general theory of descriptive ethics to the discourse of the Navaho Indians.

LADD, John. The Ethical Dimensions Of The Concept Of Action. *J Phil* 62,633–644 N 65.

Insufficient attention has been paid to the ethical implications of various analyses of the concept of action. Two widely held but unquestioned assumptions about action are discussed. (1) That action and responsibility are logically connected, so that an action is something a person can be held responsible for. It is argued that one is responsible for states of affairs, not actions, and that actions provide neither the necessary nor the sufficient conditions for responsibility. (2) The causal theory of action, i.e., that an action is a kind of producing or making. This assumption that action must be analyzed in causal terms requires that actions be categorized in terms either of their actual consequences or of their intentions. This requirement renders many kinds of moral judgments and ethical issues unintelligible. Finally, the view that actions elide into their consequences and that it makes no difference what part is included under the one or the other is rejected on the grounds that the way the division is made has important ethical consequences.

LADD, John. The Issue Of Relativism. *Monist* 47,585–609 Sum 63.

The article attempts to set forth some of the issues involved in the complicated problem of cultural relativism. The relevance of cultural relativism to ethics has constantly been misconstrued by relativists and non-relativists alike because all have taken for granted a mistaken view of the nature of ethics itself, namely, that it is a kind of knowledge differing from science only in subject-matter. Once we understand the true nature of ethics as a practical rational discipline rather than as a mode of theoretical knowledge we will be able to see how and why the facts of cultural relativity are relevant to but not yet destructive of ethics.

LAFFERTY, Theodore Thomas. *Nature And Values: Pragmatic Essays In Metaphysics*. Columbia Univ Of S Car Pr 1976.

Professor Lafferty in six brief critical essays seeks to establish a theory of reality in which human values are seen as achievements in a process of evaluation involving judgment and intelligent selection. It is a view of values belonging to a naturalistic world. His report is critical not only of the philosophical justifications advanced by the logical positivists and analysts, but also of the myths they have created. The three major myths Lafferty seeks to expel from contemporary thinking are (1) that all cognitive statements are either tautologies or else are empirical descriptions; (2) that metaphysics must be recognized as crude subjective and emotional nonsense; and (3) that "linguistic analysis" provides sufficient precise, vigorous, and rational certainties for man and philosophy to live by. After disposing of the myths, the major portion of the text develops his view of a naturalistic world in which things can be known, things can be valued, judgments can be made about both with "verification," and intelligent behavior can be based on such judgments.

LAFFITE, Paul. *The Person In Psychology: Reality Or Abstraction*. NY Philosophical Lib 1957.

The author believes psychology is concerned with "the person's concrete historical engagement in his world." He carefully argues that abstract laws derived from isolated and fragmentary test situations are of little assistance in understanding the person in society. Rather, psychology must abandon the epistemology currently fashionable in the sciences and develop its own analogical laws, taking the person as its domain.

- In Professor John Laird's Gifford Lectures we have, as we have not had in all recent Gifford Lectures, a treatment of "natural theology," in accordance with Lord Gifford's original intent. These lectures take up the following topics: natural theology, theism, the cosmological argument, creation, ubiquity, omnipotence, teleology, the argument from design, and cosmological theism. In each case, arguments which have emerged in the history of theistic thought are examined. His purpose, rather, is to inquire into the empirical basis and possible empirical validation of the theistic arguments.

- There are three "unit-ideas" of equality in Western history: the Liberal, stressing common capacities, self-interest, rationality; the Conservative, stressing mass depravity requiring elect leadership; the Socialist, stressing cooperation in communities—first ascetic and leisurely, then material. Lakoff traces the evolving forms of these "unit-ideas" from classical times to recent writers. A comprehensive, copiously documented study.
- LAKY, John Joseph.** *A Study Of George Berkeley's Philosophy In The Light Of The Philosophy Of St Thomas Aquinas*. Washington DC 1950.
- The present work attempts to show how the Berkeleyan system by its denial of the validity of abstraction and universals necessarily constituted an untenable theory of being, and to show this by a statement of the Thomistic doctrine upon these subjects. "In that philosophy," asserts the author, "there is insistence upon the reality both of the subject and of the object. Its theory of being calls for both concrete thought and abstraction. Far from being exclusive in the Thomistic synthesis, these two processes can and must complement each other. It will be shown that St Thomas Aquinas was not unknown to Berkeley. It will be shown also that the doctrines of the Angelic Doctor and of various scholastics are found in crucial passages in Berkeley's writings."

- The article summarizes the thought of Paul Elmer More, American philosopher, theologian, and literary critic, about the decay of Western Civilization. Drawing from More's entire body of writings, the article shows how More's analysis originates in Platonic dualism. It then shows how More saw various popular ideologies (romanticism, humanitarianism, and irrationalism) as deriving from monistic naturalism, or surrender to the Many. Redemption from this flight to the Many could be achieved only by a return to the Christian Logos, the One which holds the Many in salvable tension.

- This is a logic textbook aimed at philosophy students with little background in logic. The standard propositional calculus and quantification theory are developed in the first two parts, using both interim and tableau rules constructed for a free logic; i.e., to permit valid inference for all domains, including the empty one. Part three extends this system with a logic of singular terms. Part four treats the metalogical problems of completeness and soundness, and part five briefly explores some philosophical implications of free logic.

- LAMONT, Corliss.** *Freedom Is As Freedom Does: Civil Liberties Today*. NY Horizon Pr 1956.
- LAMONT, Corliss.** *Freedom Of Choice Affirmed*. NY Horizon Pr 1967.
- In Part I the author draws attention to the "perennial debate" on the problem of freedom of choice and determinism. He gives a summary of the views of philosophers as well as literary authors drawn from Western tradition on both sides of this important problem. Lucretius, W James, Jean-Paul Sartre, David Hume, Jonathan Edwards, Sophocles, Leo Tolstoy, Shakespeare, Thomas Hardy and Dostoevsky, among others are fairly represented. In Part II an analysis of deliberation is given and the role of potentiality is brought out in support of freedom of choice. Through an analysis of causation the author points out that uniformity of nature (both physical and human) is not incompatible but is presupposed by freedom of choice. In the remaining chapters the practical problems concerning character, forbearance, regret, crime, and insanity are discussed with their bearing on freedom.
- LAMONT, Corliss.** *The Independent Mind; Essays Of A Humanist Philosopher*. NY Horizon Pr 1951.
- A noted humanist here discusses such subjects as civil liberties, international relations, humanism, marriage, religion, the issues of peace and war and a variety of other subjects and problems of concern to us from day to day. His present work provides an argument for the generous humanism inherent in the idea of democracy as against the inhumanity of totalitarianism, regardless of its brand. The five chapters composing the book treat of civil liberties and politics, the philosophy of humanism, international relations, impressions of mid-century Europe and of the "comedy of life."
- LAMONT, Corliss.** A Humanist Metaphysics. *Humanist* 11,32–35 Ja–F 51.

- LAMONT, Corliss.** Limited Determinism—Limited Freedom. *Humanist* 8,183 Ja 49.
- LAMONT, Corliss.** Mistaken Attitudes Toward Death. *J Phil* 62,29–35 Ja 65.
- In this article I challenge different attitudes toward death expressed by three contemporary American philosophers. First, I take issue with Walter Kaufmann's tragico-romantic stance that "For most of us death does not come soon enough," that

"One lives better when one expects to die, say, at forty," and that a sense of impending death enriches life and love. Second, I argue against Charles Hartshorne's view that "No animal endowed with much power of memory ought to live forever, or could want to" because continued repetition of remembered experience must result in loss of zest. Third, I disagree with Sidney Hook's assertion that death is not in itself a tragic phenomenon. I find Hook's definition of tragedy too limited, and claim that "death, with all its implications, is a blow of such magnitude and finality that it is always a thing of tragic dimensions."

LAMONT, Corliss. Naturalism And The Appreciation Of Nature. *J Phil* 44,597-608 O 47.

LAMONT, Corliss. New Light On Dewey's *Common Faith*. *J Phil* 58,21-28 Ja 61.

Quoting from letters which Dewey wrote to him, the author argues that, despite his use of the word "God" in *A Common Faith*, Dewey was in no sense a theist. He was, according to the author, an uncompromising naturalist who saw the value of a shared religious faith free from outworn supernaturalism and institutional fanaticism.

LAMPRECHT, Sterling P. *Nature And History*. NY Columbia Univ Pr 1950.

This is one of the Woodbridge lectures. Chapter heads include nature, causality, history and physics, freedom, and man's end.

LAMPRECHT, Sterling P. *Our Philosophical Traditions: A Brief History Of Philosophy In Western Civilization*. NY 1955.

LAMPRECHT, Sterling P. *The Metaphysics Of Naturalism*. NY 1967.

This book is an attempt to formulate the fundamental metaphysical theory on which naturalism as a philosophical movement rests. The author views philosophy as "a legitimate outcome of scientific inquiry," and metaphysics as an empirical science differing from the other sciences only in the greater generality of its approach to existence. With Aristotle the author holds that metaphysics "seeks to formulate accurate statements concerning the generic traits which existence everywhere and always has." In addition to delineating the general theory of a naturalistic metaphysics, the author examines and attempts to reconstruct empiricism as a philosophical position. He is critical both of traditional British Empiricism and of the empiricism of Dewey. In particular essays, the author addresses himself to the solution, in terms of his own metaphysics, of some of the outstanding problems of philosophy, such as the nature of causality, the status of sensations in nature, the reality of human freedom, the role of religion in a world naturalistically conceived, the place of man in nature, etc.

LANDÉ, Alfred. The Case Against Quantum Duality. *Phil Sci* 29,1-6 Ja 62.

LANDESMAN, Charles. *Discourse And Its Presuppositions*. New Haven Yale Univ Pr 1972.

The author defends the objectivity of discourse by arguing for a realism in which objectivity is explained in terms of interpersonal discourse. Interpersonal discourse consists of universalized linguistic action which issues in identical performative objects. In the process of developing his view the author criticizes psychologism and nominalism. He also presents definitions of meaning, sentence-use, proposition and linguistic action arrived at after criticizing major contemporary interpretations of these concepts.

LANDESMAN, Charles. A Note On Act Utilitarianism. *Phil Rev* 73,243-247 Ap 64. Landesman criticizes the act utilitarianism presented in J J C. Smart's *An Outline of a System of Utilitarian Ethics*. A system which eschews rules and proposes the maximization of happiness as the only reason for preferring one action over another, he charges, cannot justify fairness and impartiality in ethics.

LANDESMAN, Charles. Does Language Embody A Philosophical Point Of View? *Rev Metaph* 14,617-636 Je 61.

Examining the Sapir-Whorf hypothesis, the author addresses the questions whether

language affects perception and whether grammatical categories affect conceptual categories. He argues that advocates of linguistic relativity have attributed to language an unjustified degree of causal efficacy and that linguistic idealism is contradicted by the results of experimental psychology. Then, considering the claimed correlation between grammatical and conceptual categories, he argues that grammar has no metaphysics and does not influence thought. The author concludes that language in use embodies a point of view only in the weak sense that relations and distinctions implicit in necessary concepts constitute a philosophical theory about reality.

LANDESMAN, Charles. Dreams: Two Types Of Explanations. *Phil Stud* 15,17-22 1964.

In his monograph *Dreaming* Norman Malcolm claims that the presence of dreams could not be established by physiological phenomena. The author rejects Malcolm's claim holding that it is based on accepting the principle: if two types of events x and y have been ascertained to occur together in a number of instances, then, if an instance of x is known to occur, we are justified in inferring that an instance of y also occurs only if it is logically possible to verify that y occurs independently of the occurrence of x. He argues that Malcolm's view is undermined by the difficulty of formulating a nonarbitrary application of this principle and then suggests situations which might support the view that dreams are brain processes.

LANDESMAN, Charles. Mental Events. *Phil Phenomenol Res* 24,307-317 Mr 64.

The property of "privacy" can, sometimes, distinguish mental from other sorts of events. It is maintained that one's own sensations, feelings and thoughts are private when: (1) they are not the sort of things others can directly perceive, and (2) one can come to know about these without the use of his senses. It is claimed that persons do have privileged access to private events, even though this access means only that one has a way of getting knowledge about such events that is closed to others. The author tries to show, that even if some mental events are private, this does not lead to skepticism.

LANDESMAN, Charles. Metaphysics And Human Nature. *Rev Metaph* 15,656-671 Je 62.

LANDESMAN, Charles. Philosophical Problems Of Memory. *J Phil* 59,57-64 F 62.

The traditional problems raised in connection with memory have arisen because of an alleged analogy of remembering with perceiving. If remembering something is a method of acquiring knowledge, then it makes sense to ask whether the method is inferential or direct. But if, as is argued in this paper, to remember that such and such occurred is an expression of pre-existent knowledge, then remembering is not a method of acquiring knowledge of the past at all, and thus the traditional problems do not arise.

LANDESMAN, Charles. Reply To Professor Whallon's "Unconscious Mental Events". *Phil Phenomenol Res* 25,404-405 Mr 65.

LANDESMAN, Charles. The New Dualism In The Philosophy Of Mind. *Rev Metaph* 19,329-345 D 65.

The author claims that philosophers of mind who find both physicalism and Cartesian dualism unacceptable now seek to define persons as agents to whom irreducible teleological concepts like intention apply. Charles Taylor's *The Explanation of Behavior* (London, 1964) exemplifies this new dualism. The author identifies weaknesses in Taylor's central theses and concludes that there is no incompatibility between physicalism and ordinary discourse, and no reason why physicalism cannot employ teleological explanations. However, certain actions presuppose social institutions, and while a physicalistic individual psychology may currently be plausible the status of social psychology remains to be clarified.

LANDOW, George P. *The Aesthetic And Critical Theories Of John Ruskin*. Princeton NJ Princeton Univ Pr 1971.

This book traces the sources and development of Ruskin's aesthetic and critical theories. In his attempt to skirt the danger of excessive emotion and association in art, Ruskin's struggle with the sublime but not the picturesque, is, along with the pathetic fallacy, examined. These concepts, too, are considered in light of Ruskin's continuing religious and intellectual development. Finally Ruskin's loss of faith is analyzed in relation to the problem of allegory in art. Ruskin argued for an unchanging standard of beauty, though the psychological nature of the artist is related to his art medium.

LANG, Berel. Langer's Arabesque And The Collapse Of The Symbol. *Rev Metaph* 16,349-365 D 62.

Susanne K Langer's aesthetic theory ultimately depends on whether and in what sense the term "symbol" can be applied to the art work. The author traces the

- development of Langer's conception of the art work as presentational symbol of the life of feeling and argues that her recognition of the impossibility of verifying the symbol's cognitive content led her to abandon the distinction between the work and its meaning or reference. In presenting his argument he stresses Langer's distinctions among sign, signal, and symbol and examines her views on intuition and abstraction in art and science.

- LANGAN, Thomas.** *Merleau-Ponty's Critique Of Reason*. New Haven Yale Univ Pr 1966.
- Examining the thought of Merleau-Ponty, particularly his ontology, Langan shows how this is a development of the transcendental philosophy that is found in Kant, Heidegger, Husserl, Marx, and Sartre. He analyzes Merleau-Ponty's use of the phenomenological method, the influence of gestalt psychology and psychoanalysis, and Merleau-Ponty's views on politics and art. Langan maintains that Merleau-Ponty's philosophy is even more fundamentally ontological than Heidegger's; and he shows how Merleau-Ponty's ontology contributes to the tradition of transcendental philosophy and is an attempt to resolve its basic problems.
- LANGAN, Thomas.** *The Meaning Of Heidegger: A Critical Study Of An Existential Phenomenology*. NY Columbia Univ Pr 1959.
- The author attempts to "translate the philosophy of Heidegger into contemporary language" although he is aware that Heidegger recreates the German language as he writes." Part I of Langan's book summarizes "the interpretation of Dasein in terms of temporality, and explanation of time as the transcendental horizon of the question concerning Being." This analysis of the *Existential* contains a summary presentation of *Sein und Zeit*. The works which were published after *Sein und Zeit* are then shown to contain all of the basic ideas of this original work. Part II assembles for the first time (so the author believes) "the main moments of the phenomenological destruction of the historical destiny of ontology." Heidegger discovers Being and finds that the essence of Being is historical. "Dasein is as Dasein does." Heidegger begins the phenomenological quest for essence by an analysis of the Dasein encountered in everyday life. Dasein is revealed to be either authentic existence or inauthentic existence. Authentic existence grasps the meaning of temporality, whereas inauthentic existence hides the real meaning of time.

- LANGAN, Thomas.** The Problem Of The Self. *Rev Metaph* 15,19-33 S 61.
- The author maintains that four categories of givens must be taken into account in the struggle for self-realization: the inherited structures of nature and temperament, historically acquired cultural dispositions, the style one gives himself through his fundamental projections, and the unqualified otherness of people, institutions, and things. He then discusses the problem of reconciling these givens in a single explanation of self and argues that what is needed is a phenomenological description of human possibility, the basic power to transcend all inherited particularities and historical acquisitions.

- Chapter 1 treats the development of Malinowski's linguistic views from 1920 to 1935 and contains an extensive discussion of his essay "The Problem of Meaning in Primitive Languages" that appeared in 1923 as an appendix to Ogden and Richards' *The Meaning of Meaning*. Chapter 2 shows how Firth's theory of meaning grew out of that of Malinowski's; while the later sections mentioned above discuss later developments in the theory of meaning that has come to be associated with J R Firth.
- LANGENDOEN, Terence** and Katz, Jerrold J. *Pragmatics And Presupposition*. *Language* 52,1-17 Mr 76.
- This paper examines the claim that the only adequate account of presupposition in natural language must be a contextual one, and that a purely semantic account of this notion is inadequate. We contend that exactly the opposite is the case: there is an adequate semantic account of presupposition in natural language, so that contextual accounts of this notion are unnecessary.
- LANGER, S K (ed).** *Reflections On Art, A Source Book Of Writings By Artists, Critics, And Philosophers*. Baltimore Johns Hopkins Pr 1958.
- All the authors represented in this "source book to serve independent study on the part of scholars and fairly advanced students in philosophy of art" share Miss Langer's predilection for two basic concepts: "expressiveness" and "semblance," which "defines the work of art as a wholly created appearance, the Art Smybol."
- LANGER, Susanne K (ed)** and Henle, Paul (ed) and Kallen, Horace M (ed). *Structure, Method And Meaning: Essays In Honor Of Henry M Sheffer*. NY Liberal Arts Pr 1951.
- LANGER, Susanne K.** *Philosophical Sketches*. Baltimore Johns Hopkins Pr 1962.
- Identified by the author as tentative results of a long research project, these nine essays and talks are "studies toward a single much larger work, a philosophy of mind." They "range over many subjects, from quite theoretical ones... 'On a New Definition of "Symbol";' to broad speculations about humanity and its problems—'Man and Animal: The City and The Ultimate Unit,' and 'The Growing Center of Knowledge.'" The author interrupted her larger project "in order to submit some of the main ideas to criticism that may prove salutary," lest her ideas become "precious 'truths'" understood only by her.

- LANGER, Susanne K.** *Feeling And Form: A Theory Of Art, Developed From Philosophy In A New Key*. NY Scribner's 1953.
- LANGER, Suzanne K.** *Problems Of Art: Ten Philosophical Lectures*. NY Scribner 1957.
- This book contains ten chapters devoted primarily to an exposition of ideas developed in the author's previous volume, *Feeling and Form*, and intended to answer certain criticisms this earlier work received. The author contends that art objects are best interpreted as virtual entities associated with physical objects, that such virtual entities embody virtual properties, have an organic form, and symbolize the life of feeling and emotion. The term "symbol" is used in this context in a non-denotative sense, that is, art objects do not denote feelings. Various problems raised by this theory are discussed, especially the relationships of virtual entities to the life of the artist, to diverse types of art, and to creative devices.
- LANGER, Suzanne.** *Mind: An Essay On Human Feelings, Vol I*. Baltimore Johns Hopkins Pr 1967.
- This is the first of a three-volume projected work and consists of three parts: (i) Problems and Principles, (ii) the Import of Art and (iii) *Natura Naturans*. The author continues and extends in this volume the philosophical explorations which began with *Philosophy in a New Key* and further developed in *Feeling and Form*. The concept of symbolism was treated in the earlier works as the characteristically human element in cognition. This view led to the concept of art as the symbolic expression of the artist's knowledge of feeling. The present volume is the result of her search for answers to the vast problem of the relations between feeling and thinking in order to shed light on why artistic form as a semblance, which is expressive of feeling, is called a *living form* and why such a semblance is necessary. One of the dominant themes in this volume is the relation between art and nature; art is interpreted as the image of feeling and feeling as a phase of organic growth.

- LANGFORD, C H.** Usage. *J Phil* 61,181-185 Mr 64.
- An analysis is here spoken of as analyzing, not a verbal expression or a concept, but a usage, where a usage is defined as a complex consisting of the structure of an instance of a verbal expression, together with the concept or proposition it expresses. Within this framework distinctions are drawn between (a) analyses that are analytic and those that are synthetic and (b) analyses that are formal and those that are conceptual. It is then shown how an analysis may be analytic and formal, analytic and conceptual, synthetic and formal, or synthetic and conceptual.
- LANGFORD, Glenn.** *Human Action*. Garden City NY Anchor Books 1971.
- In this book the author presents a concise exposition and criticism of major theories of action. He takes the view that the explanation given an action will depend upon the view taken of a person. He examines critically the Cartesian view of person as presented by Pritchard and the view of physicalism as presented by Smart and Ryle. Since neither of these views develops an adequate concept of agency the author turns to Strawson's concept of person which leads into a discussion of the relationship of belief and action. This discussion, which results in a more adequate explanation of action, includes the concept of person as both observer and agent.

- LANGMACK, H. C.** *Science, Faith, And Logic: Scientific Faith Substantiated By A Logical Science*. NY Philosophical Lib 1965.
The book displays an elaborate use of science in defense of religion. Langmack, an amateur philosopher, has included scores of complicated diagrams.
- LANGMAN, Lauren.** The Estrangement From Being: An Existential Analysis Of Otto Rank's Psychology. *J Existent* 1,455-477 Wint-Spr 61.
- LANGMUIR, Gavin I.** Majority History And Post-Biblical Jews. *J Hist Ideas* 27,343-364 Jl-S 66.
This article discusses the implications which arise from the division of history according to the time of the Incarnation. Jewish scholarship on post-Biblical Jewish history is particularly effected. The author traces the distortion of the history of the Jews, which he believes began with the Church fathers and has continued to present times. He finds both ignorance and disinterest in Jewish history among traditional "majority" historiography, and argues for more accurate study and evaluation.
- LANGO, John W.** *Whitehead's Ontology*. Albany 1972.
The book is a study of the ontology implicit in the metaphysics presented by Alfred North Whitehead in *Process and Reality* [An Essay in Cosmology, Cambridge, 1929]. The uniqueness of the author's approach is his use of logic, particularly the logic of relations, to define the types of entity and to analyze the system of categories developed by Whitehead in *Process and Reality*. J. L. seeks to show in his essay the coherence between Whitehead's later metaphysical speculation and his earlier writings in the mathematics, logic and philosophy of science, and specifically to argue that the definition of the types of entity are grounded in an internally coherent metaphysical system.

- LARSON, Allan L** and Hassel, David J and Yartz, Frank J. *Progress And The Crisis Of Man*. Chicago Nelson-Hall 1976.
Progress and the Crisis of Man proceeds from concrete examples of progressiveness to a delineation of parameters within which a philosophy of progress is to be considered. Philosophers studied include Plato, Russell, and Marx. The book stresses that a philosophy of progress must be considered in the light of the social nature of man. *Technological progress* is considered with the recommendation that its value to man must be possessed to insure man's best control over his environment. *Secularism* is studied as a possible value orientation in the cultural development of an individual. One's value orientation not only determines the way one lives, but also influences those with whom one must relate.

- LARSON, Dewey B.** *Beyond Newton, An Explanation Of Gravitation*. Portland OR North Pacific 1964.
This book is an attempt to provide an explanation for gravity, for the cohesion of solids, liquids, and galaxies, and for the spectral red-shift, and a refutation of relativity, by means of the hypotheses that time has three dimensions just as space has, that motions in time and motions in space are reciprocally related and equivalent at unit value, that there exist an "outward" motion of each space-time location from every other location, at the velocity of light, and that "each atom of matter has an inherent motion of rotational origin opposite to the motion of the spacetime progression in direction and equal in magnitude (to it) at a finite distance."
- LARSON, Dewey B.** *New Light On Space And Time*. Portland OR North Pacific 1965.
- LARSON, Dewey B.** *The Case Against The Nuclear Atom*. Portland OR North Pacific 1963.
This book is a carefully organized argument that the available experimental evidence is insufficient to support the generally accepted Rutherford-Bohr model of the atom as composed of a very small, positively charged nucleus surrounded by orbiting electrons. Larson argues that there is no evidence that atoms are in contact with one another in solids, and considerable evidence from compressibility that they are not, so that Rutherford's scattering experiment is not proof of widely separated nuclei, but atoms.

LASZLO, Ervin (ed) and Wilbur, James B (ed). *Human Values And The Mind Of Man: Proceedings Of The IVth Conference On Value Inquiry*. NY Gordon & Breach 1971. This book is made up of thirteen papers. The first paper by J B Rhine relates parapsychology to religion and "the science of man." Abraham Edel's paper points out that the concept of virtue has been neglected of late but may be a topic of renewed interest in philosophical discussion. Larry Holmes argues that men differ from machines in that only men can set goals or purposes for themselves. Ruth Macklin read a paper on "the Language of Action."

LASZLO, Ervin. *A Strategy For The Future: The Systems Approach To World Order*. NY Braziller 1974.

This book is proposal for a world society based on the cybernetic approach known as General Systems Theory. Implementation of the plan is designed for three stages: 1) global consciousness raising, 2) organization of multilevel decisions as information-decision feedback systems, and 3) a dynamically stable global system of self-regulation. Strategies are outlined for each stage, and the envisioned means and ends are evaluated with an eye to developments beyond the global system.

LAUER, J Quentin. *Triumph Of Subjectivity: Introduction To Transcendental Phenomenology*. NY Fordham Univ Pr 1958.

In the new Orestes Brownson Series on Contemporary Thought and Affairs, this first volume is an exposition of the philosophy of Edmund Husserl (on which Father Lauer published a study in French, in 1954). The intentionality of consciousness theme is treated in the successive stages of its development from the *Logical Investigations* to the *Cartesian Meditations*. Throughout, the author maintains a balance between the descriptive and the essential tendencies of the method. In a closing chapter, on the future of phenomenology, there is a rapid survey of what Scheler, Heidegger, Sartre and Merleau-Ponty have done with phenomenology. "For all of them," Lauer concludes, "philosophy is a penetration to the 'sense' of a pre-philosophical content of consciousness. Each, then, limits himself to a description of what he finds revealed in consciousness—each is at the same time aware that the description itself is somehow an instrument of the revelation."

LAUER, Quentin. *A Reading Of Hegel's Phenomenology Of Spirit*. NY Fordham Univ Pr 1976.

One is made aware of the difficulty posed by Hegel's aim and its linguistic expression. An overview of the whole movement of thought provides a framework for understanding the *Phenomenology's* "front matter," as well as for interrelating the particular stages of the argument. Attention centers upon the major phases of Hegel's phenomenological voyage and upon concrete historical illustrations of his cultural analyses. Separate chapters establish distinctive meanings for: perception and understanding, self-consciousness and reason. The Hegelian senses for "spirit" are explained as covering its embodiment in longstanding custom and law; its cultural tensions of alienation, enlightenment and terror; and its constitution of a moral world view. Only after traversing this long march from sensation to religion and philosophical knowing, does Lauer analyze the complexities of Hegel's Preface.

LAUER, Quentin. Marxism: Philosophy Of Freedom. *Thought* 38,22-38 Mr 63.

LAUER, Quentin. Questioning The Phenomenologists. *J Phil* 58,633-640 O 61.

The author puts several questions to phenomenologists. For example, is phenomenology more than a grammar of philosophy? Is phenomenology really a method of obtaining insights into essential structures, or is it a method of justifying insights that precede the application of the method? To what extent is the scientific ideal separable from phenomenology? Can phenomenology deal with intersubjectivity? The author also points to the ahistorical character of phenomenology and its abstraction from the contingency of the factual and existent.

LAVINE, T Z. Karl Mannheim And Contemporary Functionalism. *Phil Phenomenol Res* 25,560-571 Je 65.

Contemporary sociological functionalism stems from two distinct nineteenth century sources: (1) biologicistic organicism (conventionally assumed to be the single source), utilized in the positivistic systems of Comte and Spencer; (2) the relatively unknown Romanticist-historicist concept of the unity and uniqueness of spirit of a social group, utilized in the dialectical, historicist, anti-positivist systems of Hegel and Marx. Mannheim is shown to derive from (2), and the historicist-Romanticist meanings he gives in the development of his thought to structure and function, the key words in the language of contemporary functionalism, are noted. Mannheim consequently avoids certain difficulties of biologicistic functionalism but takes on the metaphysical difficulties of Romanticism-historicism. He abstracted the same set of formal concepts as biologicistic functionalism but his use of these concepts is for the most part historicist, evaluative, and diagnostic in sharp distinction from the formalistic neutralism which prevails in contemporary functionalism.

LAWRENCE, Nathaniel M and Brumbaugh, Robert S. *Philosophers On Education: Six Essays On The Foundations Of Western Thought*. Boston Houghton Mifflin 1963. In 1959, Brumbaugh published an article on "Aristotle's Philosophy of Education as Social Process" to John Dewey and the *Experimental Spirit in Philosophy*, C W Hendel, Editor. The first was revised, and the second was followed by a sequel. The collaboration is a credit to both authors, the first, an authority on Plato, the second, on Whitehead, and there are chapters of professional competence on these thinkers. To throw some bridge between the ancients, Plato and Aristotle, and the 20th century

philosophers, Dewey and Whitehead, the authors supply essays on two thinkers of the Age of Reason, Rousseau and Kant.

LAWRENCE, Nathaniel. *Whitehead's Philosophical Development: A Critical History Of The Background Of Process And Reality.* Berkeley Univ Of Calif Pr 1956.

A sympathetic, fully detailed account, interpretive and critical as well as expository, of Whitehead's major publications before 1929. Whitehead's thought, it is argued, shows a clear development in these early works away from exclusive preoccupation with the philosophy of natural science, towards a wider, more metaphysical outlook, comprehending values. Mr Lawrence focuses especially on the epistemological aspects of the Whiteheadian philosophy, distinguishing conflicting "realistic" and "conceptualistic" strains. This and other inconsistencies, however, are exhibited less as deficiencies than as a fruitful source of progress and growth in Whitehead's thinking, culminating in the grand synthesis of *Process and Reality*. The book, one of the best on Whitehead yet to appear, nicely combines scholarship and philosophy.

LAWRENCE, Nathaniel. A Note On Value Statements. *J Phil* 48,597-606 S 51.

philosophy and Logical Syntax by Rudolf Carnap is used by the author as an example of a thesis which too rigidly applies the distinction between facts and values to language. The author offers three objections to Carnap's position which are summarized at the conclusion of the article.

LAWRENCE, Nathaniel. Benevolence And Self-Interest. *J Phil* 45,457-462 Ag 48.

LAWRENCE, Nathaniel. The Actual World And The Modes Of Meaning In The Philosophy Of C I Lewis. *Phil Rev* 61,212-220 Ap 52.

LAWRENCE, Nathaniel. The Dialectical Analysis Of Freedom. *Rev Metaph* 12,589-601 Je 59.

LAWRENCE, Nathaniel. The Vision Of Beauty And The Temporality Of Deity In Whitehead's Philosophy. *J Phil* 58,535-552 S 61.

The author takes issue with Stephen Ely's claim that Whitehead's God is hardly available for religious purposes. He argues that Whitehead attempted to develop a notion of God that might select the best in religious consciousness, rather than merely conform to prevailing notions of what kind of God might be satisfactory. Whitehead's repeated recourse to aesthetic vocabulary, he suggests, is essential in relating the temporality of God to the overcoming of evil.

LAWRENCE, Nathaniel. Whitehead's Method Of Extensive Abstraction. *Phil Sci* 17,142-163 Ap 50.

LAWRENCE, Roy. *Motive And Intention; An Essay In The Appreciation Of Action.* Evanston IL 1972.

Lawrence challenges present models for understanding human activity with a phenomenological examination of the cluster of concepts: motive, intention, and purpose. His work is based on a careful look at everyday discourse and historical narratives. It takes to task traditional epistemological wisdom as to the "privacy," and the "inner mental causal efficacy," of motives and intentions which Lawrence finds running through the entire history of western philosophy from Plato to Ryle.

LAWSON, Chester A. *Language, Thought, And The Human Mind.* East Lansing Mich State Univ Pr 1958.

LAWSON, Douglas E (ed) and Lean, Arthur E (ed). *John Dewey And The World View.* Carbondale S Illinois Univ Pr 1964.

This is a compendium of assessments and praise of John Dewey and other important figures of instrumentalism in American education. John L Childs epitomizes Dewey's philosophy as an awareness of change and a belief that reflection originates in problems.

LAWSON, Douglas E. *Wisdom And Education.* Carbondale S Illinois Univ Pr 1961.

LAYZER, David and Menzel, Donald H. The Physical Principles Of The Quantum Theory. *Phil Sci* 16,303-324 O 49.

LAZEROWITZ, M. *Studies In Metaphilosophy.* NY Humanities Pr 1964.

This book is a collection of six essays entitled, "Methods of Philosophy," "The Nature of Value," and "The Metaphysical Concept of Space." The target in each case is the whole of technical philosophy; the thesis to be defended is the claim that its separate divisions represent no more than "linguistically contrived intellectual illusions." Along the way, it is argued that the traditional retreat from speculative metaphysics to philosophical analysis is to no avail, for it is claimed that since all philosophy is of a piece, all its parts and methods stand or fall together. We are offered, therefore, the following dual thesis which is both surprising and unique: Philosophy is an ordered whole in structure and method, but the products of philosophical reflection embody nothing more than snares, delusions, and unproductive disputation.

LAZEROWITZ, M. Self-contradictory Propositions. *Phil Sci* 7,229-240 Ap 40.

LAZOWICK, Frank E. *The Science Of Philosophy.* NY Philosophical Lib 1959.

The author presents, as a philosophical "periodic table," including "all the real Categories of Reality... and none else but them," the following list (with the name of the "social-civic Institution" corresponding to each in parentheses): faith (the church) and wisdom (the universities); love (family, charities, social groups) and beauty (the arts); justice (courts) and might (military establishments); and freedom (civil-liberties organizations, the press, "etc."). These categories are unified by "Will (Master-Purpose)," The "integral holistic" attribute; and the meaning and solution of the whole (an "enigma") is God.

LAZZARINI, Renato. Intentionalism And Contemporary Currents Of Spiritualist Philosophy. *Int Phil Quart* 1,301-332 My 61.

LE BARON, Bentley. Négritude: A Pan-African Ideal? *Ethics* 76,267-276 Jl 66.

Négritude and Pan Africanism are patterns of thought which overlap but can also conflict. Pan Africanism calls for unity of diverse cultures and races, but in one form Négritude is racially divisive. It makes claims to represent, almost mystically, the spiritual, warm, "humanistic" aspects of the human community; it ties African socialism to race. Unlike Pan Africanism, Négritude puts cultural, psychical factors before-political and economic ones.

LE BLOND, Jean-Marie. The Contemporary Status Of Atheism. *Int Phil Quart* 5,37-55 F 65.

The vastly increased number of atheists makes a qualitatively new phenomenon in the history of atheism; perhaps they soon may be a majority in the world. Post-Christian atheism is marked by a process of laicization of Christian dogmas, such as that of the Incarnation, the Holy Spirit, the Church, demythologized into devotion to humanity. The rational arguments of atheism are weak, but the real argument on which atheists rely is the very historical process itself by which man has gradually come to be more and more dependent on himself and his own science, making God less and less relevant to the needs of men. The process is projected to the limit and presented as self-justifying. Some main types are examined, the scientific, the metaphysical, the humanistic.

LeFevre, a theologian, explains the philosophies of man of Julian Huxley, Teilhard de Chardin, Karl Marx, Sigmund Freud, Soren Kierkegaard, Martin Buber, and Reinhold Niebuhr. He ends by presenting his own view.

LE MAHIEU, D L. *The Mind Of William Paley: A Philosopher And His Age.* Lincoln U19,6.

The central focus of this essay is upon Paley's influential natural religion, his classic defense of the teleological argument for the existence of God. In the wake of Hume's critique of the proof of the existence of God in his *Dialogues Concerning Natural Religion*, Paley presented his inductively rooted analogical arguments in defense of the conception of God as designer of the order, regularity, and purposiveness which, as it is shown clearly, dominated Paley's thoughts. There are discussions of Paley's eudaemonistic, utilitarian ethics, his anti-aristocratic political sentiments and his influence upon a variety of nineteenth century thinkers.

LEBLANC, Hugues. *Statistical And Inductive Probabilities*. Englewood Cliffs NJ Prentice-Hall 1962.

This book seeks to settle the running dispute as to the nature of probabilities stemming from the work of von Mises in 1919 which assigns what are called *statistical probabilities* to sets, and the Work of Keynes in 1921 which assigns what are called *inductive probabilities* to sentences. The first chapter reviews the essentials of sentence theory and set theory, constructing a master language L and an infinite sequence of sublanguages $L/u_1/r, L/u_2/r$, and so on, with a set theory grafted into these languages. The second chapter deals with statistical probabilities as measurements on sets, takes up the hypergeometric and binomial distributions, and discusses the problem of estimating probabilities by means of samples. Chapter Three shows how these statistical probabilities may be passed on to sentences and thereupon become truth-values of a sort, with the relative frequency allotment discussed in detail. The final chapter discusses various ways of allotting inductive probabilities to sentences, shows that these qualify as estimates of truth-values, and makes comparisons with various theories of personal probability.

LEBLANC, Hugues. That Positive Instances Are No Help. *J Phil* 60,453-462 Ag 63. Nelson Goodman argued (*Journal of Philosophy*, Volume 53, 1946) that the time-honored rule, "If one or more A's have been examined and each one of them has proved a B, trust every unexamined A to prove a B," is downright foolery, since in the name of it every unexamined A could also be trusted to prove a non-B. Critics have countered that, granting the consequence, the next A could nonetheless not be trusted with equal justice to be both a B and a non-B, and hence Goodman's paradox is less damaging than he would have it. This objection is regarded as unsound, and to demonstrate this the paradox is restated in a more telling form.

LEBLANC, Hugues. The Algebra Of Logic And The Theory Of Deduction. *J Phil* 58,553-558 S 61.

Elaborating on a remark in *Principia Mathematica*, the author studies two ways of converting postulates for the Boolean class calculus into postulates for the propositional calculus. He suggests that Whitehead might have preferred a rule of inference which he proposes to that offered by C I Lewis.

LECLERC, Ivor. *The Nature Of Physical Existence*. NY Humanities Pr 1972.

The author's aim is to elucidate the fundamental concepts in terms of which the nature of the universe is understood—the philosophical concepts that are involved in and underlie scientific theories—and to this end he examines the origins of the modern conception of the universe as conceived and developed in the sixteenth and seventeenth centuries. The work falls into four parts. Part I is concerned with the concept of the infinite, first as it was understood by Aristotle, and then as modified in mediaeval and later thought. Part II investigates the XVIIth century conception of physical existence and the development of the modern concept of matter. In Part III an analysis of the modern conception of the physical is undertaken, with attention to the concepts of motion, place, the void, space, atomism, the continuum, and other related issues.

LECLERC, Ivor. Kant's Second Antinomy, Leibniz, And Whitehead. *Rev Metaph* 20,25-41 S 66.

As in the seventeenth century, advances in physical science have once again made the problems set forth in Kant's second antinomy acute for cosmological thought. Leibniz's consideration of this complex of problems led to his theory of monads. In Whitehead's case, on which this article centers, sustained reflection on the problem of discreteness and continuity led to a radically new theory of unitary actuality. Tracing the development of Whitehead's thought and examining his concepts of actuality, possibility, and becoming, the author offers an account of his doctrine of the plenum or quantum whole.

LECLERC, Ivor. Whitehead And The Problem Of Extension. *J Phil* 58,559-564 S 61. The author argues that, in his later period, Whitehead developed a theory of extension significantly different from that of his earlier period. he rejected the notion that actuality can consistently be regarded as a real and argued that continuity pertains to potentiality. In this position, the author contends, Whitehead agreed with Leibniz that extension is ideal, but he disagreed with Leibniz about the nature of ideality.

LEE, Dwight E and Beck, Robert N. The Meaning Of Historicism. *Amer Hist Rev* 59,568-577 1954.

Since the word historicism has become increasingly important in twentieth century thought, this article seeks to examine the fundamental meanings and positions falling under the label. The chief uses uncovered include: (1) explanation or evaluation by means of history; (2) historicization of life; (3) historicization of philosophy; (4) historical relationism and relativism; and (5) historical prediction. It is noted that not all of these meanings are consistent with each other, and we therefore suggest two brief definitions of the term: first, the belief that the truth, meaning, and value of anything is to be found in its history; and second, the antipositivistic view that historical knowledge is a basic requirement for understanding the human condition.

LEE, Edward N. On The Metaphysics Of The Image In Plato's *Timaeus*. *Monist* 50,341-368 JI 66.

First I analyze the formal structure of *Timaeus* 48e-52d to show that in those pages Plato expounds the meaning of his metaphysical doctrine that phenomena are images of the Forms. Then I argue that his explanation of that doctrine succeeds in avoiding the problems posed for his theory in the *Parmenides*. I conclude by comparing this solution to his problem with one earlier suggested by R E Allen, and point out some problems in interpreting Plato's doctrine here.

LEE, Harold N. *Percepts, Concepts, And Theoretic Knowledge*. Memphis TN Memphis State Univ 1973.

A detailed, systematic epistemology is developed within the tradition of pragmatic, naturalistic, process philosophy. No fixed world nor definite things are assumed except as mind delineates what it uses, and in delineating, knows; but mind itself is a natural process and emerges only as the organism reacts. In the development of language, concepts (meanings) arise; process can be symbolically stopped, and things (objects) are carved from the ongoing flux. After the Introduction, there are chapters on Intuition, Perception, Fact, Logic, Evidence, Belief and knowledge, Induction, Hypothesis, Science, History, and Categories.

LEE, Harold N. A Criticism Of The Marxian Interpretation Of History. *Tulane Stud Phil* 1,95-106 1952.

The dialectic of history is a scientific law operating with "iron necessity" according to Marxian theory. Philosophers of science today, however, hold that scientific laws are not necessary but are probable, hypothetical, and must be empirically tested. A universal pattern of history cannot be established empirically because knowledge of historical events is too fragmentary. But a hypothetical law, established empirically, will not do what the dialectic is supposed to do in Marxian theory since the Marxian doctrines of agitation and violent revolution are based on the necessity of the dialectic pattern.

LEE, Harold N. A Fitting Theory Of Truth. *Tulane Stud Phil* 14,93-110 1965.

This article defines truth as a semantic relation between discourse and non-discursive experience. Discourse is composed of discrete symbols representing selections from the continuum of experience. The elements of discourse are finite in number, but the elements of the continuum of experience are infinite, and the relation between the discrete and the continuous is involved. Experience is structured by making selections from it and putting them into systematic, conceptual order. Whatever fits within some conceptual scheme with reasonable adequacy is true. Thus, there may be alternative truths. Truth is not absolute.

LEE, Harold N. A Fitting Theory Of Truth. *Tulane Stud Phil* 14,93-110 1965.

This article defines truth as a semantic relation between discourse and non-discursive experience. Discourse is composed of discrete symbols representing selections from the continuum of experience. The elements of discourse are finite in number, but the elements of the continuum of experience are infinite, and the relation between the discrete and the continuous is involved. Experience is structured by making selections from it and putting them into systematic, conceptual order. Whatever fits within some conceptual scheme with reasonable adequacy is true. Thus, there may be alternative truths. Truth is not absolute.

LEE, Harold N. A Precise Meaning For Objective And Subjective In Value Theory. *J Phil* 37,626-637 N 40.

LEE, Harold N. A Semantic Criticism Of Reichenbach's Ethics. *Ethics* 64,307-310 JI 54. Reichenbach holds ethics to be a body of volitional directives. His view of the nature of ethics is not a body of volitional directives, but, since it is a branch of scientific philosophy, is cognitive. His language confuses the study of a broad field of experience with the field itself. If one uses 'ethics' to signify the philosophic theory, and 'morals' or 'morality' to signify the body of volitional directives, and makes these changes in Reichenbach's chapter, then much of his polemic against traditional philosophy becomes irrelevant.

LEE, Harold N. An Epistemological Analysis Of Induction. *Tulane Stud Phil* 2,83-94 1953.

LEE, Harold N. Bergson's Two Ways Of Knowing. *Tulane Stud Phil* 8,49-60 1959. Bergson, in *Two Sources Of Morality And Religion*, holds that scientific knowledge is conceptual, intellectual, and reaches only a static image of reality; whereas philosophic knowledge is intuitive, based on feeling, and reaches the true, dynamic reality. Thus, despite Bergson's emphasis on continuity, a duality underlies his epistemology. Bergson overcomes the dualism by mysticism, but this solution is available only to those who have had the mystical experience. The present article argues that the dualism can be better overcome by a naturalistic doctrine of concepts originating in organic reactions and responses to the flux of experience.

LEE, Harold N. Causal Efficacy And Continuity In Whitehead's Philosophy. *Tulane Stud Phil* 10,59-70 1961.

Whitehead's doctrine of the perception of causal efficacy holds together two aspects of his philosophy: realism and empiricism. But his insistence on the atomicity of actual entities compromises the continuity necessary to the perception of causal efficacy. He says that both continuity and atomicity must be taken into consideration, but he fails to show the relation between them. If he had taken the historic route of actual entities as his unit and had let actual occasions be analytic derivatives from an historic route, he would have avoided the difficulties that arise in his treatment of continuity.

LEE, Harold N. Ethics As Hypothesis. *Phil Rev* 56,645-655 N 47.

Theories of ethics have usually tended to be dogmatic, assuming that certainty of knowledge can be attained. At the other extreme are the antinomians who hold that there is no certain knowledge and that therefore there is no knowledge of good and evil. This article holds, against both these positions, that there is knowledge in ethics but that it is hypothetical and probable. Several ethical theories are examined: intuitionism, rationalism, authoritarianism, and hedonism. It is concluded that the most promising hypothesis is a combination of rationalism and evaluative hedonism.

LEE, Harold N. Father Parmenides; Or, Further Concerning Negative Facts. *J Phil* 50,70-73 Ja 53.

LEE, Harold N. Is A Bad Law A Real Law? *Tulane Law Review* 31,479-490 1957.

Juristic law is different from scientific law and from moral law. The definition of juristic law is analytic and its actuality does not depend on whether it is good or bad. The goodness or badness of law is a question of value and requires a definition in terms of purposiveness. Political institutions have primarily instrumental value. The article discusses the sense in which positive instrumental value may outweigh negative intrinsic value. Laws are necessary instruments for producing social conditions for the achievement of moral values.

LEE, Harold N. Knowledge And Truth In Historical Inquiry. *Tulane Stud Phil* 5,63-70 1956.

LEE, Harold N. Mead's Doctrine Of The Past. *Tulane Stud Phil* 12,52-75 1963.

Mead's doctrine of the past involves a new theory of the nature of time. Only the present is actual. The physical world is constructed in the present from "the world that is there unreflectively." The past is part of the physical world, and is both irrevocable and revocable. Something happened; the problem of the historian is to formulate precisely what happened. He has to do so from evidence existing in the present as it is relevant to the present. The article presents a conceptual model for interpreting Mead's doctrine of time in terms of contemporary process philosophy.

LEE, Harold N. Metaphysics As Hypothesis. *J Phil* 44,344-351 Je 47.

Metaphysical theories should be regarded as hypotheses. Metaphysics yields knowledge that is hypothetical in the same way as are the theories of natural science. Scientific hypotheses cannot be proved with certainty; neither can any doctrine of metaphysics. But as scientific theories can be called knowledge, so can metaphysical hypotheses when reasonably confirmed. By means of illustrations, analysis, and argumentation, the article defends the foregoing position, using Cartesian dualism, knowledge of other minds, and knowledge of the external world as illustrations.

LEE, Harold N. Perception And Epistemology. *Tulane Stud Phil* 13,27-43 1964.

An epistemological theory of perception cannot be merely psychological because the categories of psychology must be established first. Intuitive data (stimuli, sensations) are infinite in variety, but possible responses are limited in number. The economy of response produces proto-generalizations: patterns in which similarities in response become similarities in the data. Recognition, anticipation, and consciousness emerge. Present data become symbols, and concepts are developed. Conscious percepts are intuitive data interpreted by means of concepts. With conceptual knowledge, standards of coherence and consistency are developed to distinguish between veridical and non-veridical perception, and objects are perceived.

LEE, Harold N. Philosophy And The Categories Of Experience. *Tulane Stud Phil* 7,69-90 1958.

This article holds that philosophy is the formulation and criticism of categorial schemes for understanding experience. Assumptions concerning starting place and method are discussed and an example of such a scheme is presented. The history of philosophy can be interpreted as successive developments of this sort. There is no warrant, however, for assuming only one scheme is "true." Alternatives are possible and many widely differing ones have been proposed. Some of them perform the task of understanding better than others, and thus should be preferred.

LEE, Harold N. Questions Of Fact Or Questions Of Interpretation? *J Phil* 48,242-244 Ap 51.

LEE, Harold N. Reply To Mr Berenda's Comments On "Metaphysics As Hypothesis". *J Phil* 45,300-301 My 48.

LEE, Harold N. Royce As Logician. *Tulane Stud Phil* 4,61-74 1955.

Royce was, perhaps, second only to Peirce in competence and contributions to symbolic logic in the America of his time. This article cites and briefly discusses some of his major logical writings and his relationship with Peirce. Those who interpret Royce's metaphysics without an understanding of his logic and of the way that he used the logic in his whole philosophy are apt to misinterpret him and get a one-sided picture of his philosophy; or even come up with a caricature such as that presented by Santayana in his *Character and Opinion in the United States*.

LEE, Harold N. Scientific Method And Knowledge. *Phil Sci* 10,67-74 Ap 43.

A science is a systematic and orderly body of general knowledge. The insistence on system and order is an attempt to guarantee that the purported knowledge is genuine knowledge. The present article elucidates and illustrates this definition in the fields of the empirical sciences, the rational sciences, and the philosophic sciences. The method of hypothesis has been developed to systematize the making and testing of generalizations in order to avoid hasty generalization. When a science points outside its system to facts, probable knowledge ensues.

LEE, Harold N. Suggestions Toward A Contemporary Epistemology, Part II. *S J Phil* 2,151-156 Wint 64.

LEE, Harold N. Suggestions Toward A Contemporary Epistemology, Part III. *S J Phil* 3,3-9 Spr 65.

- LEE, Harold N.** The Hypothetical Nature Of Historical Knowledge. *J Phil* 51,213-219 Ap 54.
An uncomplicated account is given of finding for the editors of *The Dictionary of American Biography* the date of the death of Etienne de Bore. The account illustrates the sense in which historical knowledge is hypothetical and lacks theoretic certainty. The kinds of generalities and inductions involved are analyzed. The attempt to state a general pattern of all historical events is an hypothesis built upon hypotheses and although the statement of such a pattern may yield insights for interpreting past events, it is speculative and cannot hope for much empirical verification.
- LEE, Harold N.** The Rigidity Of Kant's Categories. *Tulane Stud Phil* 3,113-122 1954.
Kant's transcendental deduction yields twelve and only twelve categories; but behind the argument lie two assumptions: 1) Newtonian physics gives unalterable and certain knowledge of phenomena; 2) the subject-predicate logic is the correct tool for the analysis of knowledge. This article examines the place of both assumptions in Kant's doctrine and the relevance of each today. Both assumptions must be discarded, and with them goes the rigidity of the categories; but the article shows how Kant's important insights into the place of the categories in knowledge can be salvaged.
- LEE, Harold N.** The Use And Abuse Of Words. *J Phil* 39,625-630 N 42.
- LEE, Harold N.** Theoretic Knowledge And Hypothesis. *Psychological Review* 57,31-37 Ja 50.
Theoretic knowledge is generalized knowledge, and all theory is hypothetical. Facts may be perceived but generalizations are constructed; they do not grow on accumulations of fact and wait to be picked off; rather they are products of creative intelligence. There is no way of rendering anything in experience intelligible but by relating it to other things by suitable generalizations. The form of the hypothesis is: "If the generality G holds, the particular experiences a, b, c,... are rendered intelligible." Whatever generalizations perform the task are true insofar as they can be verified.
- LEE, Harold N.** What Are So-Called Moral Judgments About? *Tulane Stud Phil* 6,87-94 1957.
Various reasons for holding that so-called moral judgments are not genuine, cognitive judgments are examined and rejected. Cognitive judgments can be made about facts. It is conceded that values are not facts, but a detailed attempt is made to show that values are components of factual situations in such a way as to make them proper objects of judgments. Moral judgments are about what is better or worse in choice: choice of either means or ends; and there is probable knowledge about this, and hence of what is good. The probable knowledge is embodied in moral judgments.

- LEISER, Burton M.** *Custom, Law, And Morality, Conflict And Continuity In Social Behavior*. Garden City NY Anchor Books 1969.
A study of custom and its relations to law and to moral rules, with special attention directed to an analysis of the concept of custom, its many varied usages, and the manner in which custom affects attitudes and social practice is discussed in this book. In connection with the influence of custom upon international law, there is a detailed critique of Suarez's analysis of custom, natural law, and related matters.

LEISER, Burton M. In Defense Of Capital Punishment. *Barrister* 1,10 Ff Fall 74.

This article is an extensive critique of the US Supreme Court's 1972 decision on capital punishment, *Furman vs Georgia*. In it, I attempt to demonstrate that the rationale employed by the majority in striking down death penalty statutes is fallacious and, if carried to its logical conclusion, would lead to absurd results. At the same time, I offer a number of arguments in favor of retaining the death penalty—or, more correctly, of restoring it.

LEISER, Burton M. The Sanctity Of The Profane: A Pharasaic Critique Of Rudolf Otto. *Judaism* 20,87 Ff Wint 71.

This article is a critical analysis of Rudolf Otto's book, *The Idea of the Holy*, in which I show that, at a number of crucial points, Otto's views reduce to meaningless nonsense. In the course of the article, I suggest that holiness is more properly conceived as being analogous to the concept of property than as a property inherent in a person or thing. That is, to say that anything is holy is to use a shorthand expression for a complex series of relationships between persons and things, and not to describe the thing that is said to be holy.

LEISER, Burton M. Truth And Civil Rights. *Intellect* 101,304 Ff F 73.

This article is a defense of a strong libertarian view on freedom of the press, in the tradition of John Stuart Mill. In it, I argue against the imposition of any restrictions on the publication of any material whatever on any grounds, including the claim that the material is obscene or pornographic.

LEMOS, Ramon M. Immediacy, Privacy, And Ineffability. *Phil Phenomenol Res* 25,500–515 Je 65.

Since immediate experience is necessarily private to the person who has the experience, a question arises as to whether it is necessarily ineffable. To say that an experience is ineffable is to say either that it is indescribable, that it is inexpressible, or that it is incommunicable. Whether an experience is indescribable or not depends upon whether it is simple or unanalyzable, not upon whether it is immediate. Since some immediate experiences are simple and some are not, some are indescribable and some are not. Whether an experience is expressible or not never depends upon its intrinsic nature, but upon one's ability to talk. Therefore no immediate experience is intrinsically inexpressible. And since the communicability of an experience never depends upon its intrinsic nature, but upon the appropriateness and clarity of the language of the speaker and the experience and intelligence of the hearer, no immediate experience is intrinsically incommunicable.

LEMOS, Ramon M. Objectivism, Relativism, And Subjectivism In Ethics. *Int Phil Quart* 5,56–65 F 65.

The relativist contends that one has a duty to do something if and only if one's society holds that one does. The subjectivist maintains that one has a duty to do something if and only if one believes that one does. The objectivist argues that men have objective duties which are sometimes independent of what either they or their societies believe they are. My object is to indicate what seem to be some obvious, yet fatal, objections to relativism and subjectivism, and to show how objectivists can take account of certain of the insights of relativists and subjectivists. I seek to show that relativists and subjectivists misunderstand the import of their insights, and that it is

because of this that they suppose that these insights provide support for relativism or subjectivism when in fact they do not, and can be, indeed need to be, incorporated into a sound objectivist position.

LEMOS, Ramon M. Psychological Egoism. *Phil Phenomenol Res* 20,540–546 Je 60.

Lemos distinguishes psychological egoism from ethical egoism, ethical hedonism and psychological hedonism. Psychological egoism purports to be a description of the way in which all men always do behave; this claim cannot be justified. Also, the view purports to describe human actions or motivations at three levels—conscious, unconscious, subconscious. It is argued that even if this position is true at the subconscious level, it is false at the other two. Moreover, if true at the conscious level, one cannot act altruistically, but one can live up to what ethical altruism demands, so the view is false at the only level that matters. All our acts are not motivated by conscious desires to promote our interests.

LEPLEY, Paul M (ed) and Cobb, Robert A (ed). *Contemporary Philosophies Of Physical Education And Athletics*. Columbus OH Merrill 1973.

This book is concerned with personal philosophies of physical education, education, and the preparation of physical education teachers for elementary, secondary, and higher education. Contributors are "current authorities of national stature" chosen to reflect diversity in the areas discussed, geographic distribution, size and constituencies of their institutions, and their philosophical perspectives.

LEPLEY, Ray (ed). *The Language Of Value*. NY Columbia Univ Pr 1957.

This rewarding volume consists of twelve essays, comments on each essay, and the contributor's response to the comments. The essays range from an examination of concrete value experience to the explication of axiological concepts and the elaboration of formal schemes. Richard Brandt sharply criticizes attitude theories; Charles Stevenson replies. Charles Morris describes an empirical study of the signification of appraisive signs, involving the correlation of somatotype and the preference for certain types of painting. And Jan McGreal contributes a sparkling dialogue dramatizing the analytic procedure.

LEPLEY, Ray (ed). *Value, A Cooperative Enquiry*. NY Columbia Univ Pr 1949.

This book is a collection of papers by American empiricists and naturalists in which the contributors propose and discuss answers to such problems as "Is the scientific method, in its broad sense, applicable to judgments of value? Is a judgment of value

a necessary condition for the existence of values? The questions are posed by Dewey in the introductory article.

LEUBA, James H. Sources Of Humanism In Human Nature. *Humanist* 1,1-4 Spr 41.

LEUE, William H. Process And Essence. *Phil Phenomenol Res* 21,62-79 S 60.

Whitehead's "eternal objects" constitute a recognition of "universals," and such an ontology seems to be incompatible with his emphasis on the primacy of individuals and process. When, however, the ubiquity and specificity of eternal objects—the functioning of every eternal object in each "actual occasion," and the availability of eternal objects for every possible nuance of definiteness—are understood, they not only become compatible with his process metaphysics, but are required to overcome conceptual difficulties that stand in the way of making process theories reasonable.

LEVETON, Alan. Time, Death And The Ego—Chill. *J Existent* 6,69-80 Fall 65.

LEVI, Albert William. *Literature, Philosophy And The Imagination*. Bloomington Indiana Univ Pr 1962.

The author makes many suggestive comparisons: e.g., the literary equivalent of traditional positivism is the novels of Robbe-Grillet; the poetic equivalents of Peirce's firstness, secondness, and thirdness are the poems of Wallace Stevens, Ezra Pound, and T S Eliot, respectively. Levi's division of the imagination into its teleological, dramatic, literary, and metaphysical forms is well taken.

LEVI, Albert William. *Philosophy And The Modern World*. Bloomington Indiana Univ Pr 1959.

LEVI, Albert William. *Philosophy As Social Expression*. Chicago Univ Of Chicago Pr 1974.

philosophy as Social Expression is a reinterpretation in the history of philosophy, and a contribution to the philosophy of culture and the history of ideas. Levi examines the contemporary state of philosophy which he sees as a technical discipline suffering from an impoverishment of interest and a serious loss of a sense of relevance of the rich resources of philosophical tradition. He argues in critical essay that philosophical concepts have a distinctly temporal aspect; that they are—"dated reflections of the time and social contexts in which they originate." He defends that thesis by considering the works of four major figures as characteristic expressions of distinct historical periods: Plato (the age of the aristocrat), Aquinas (the age of the saint), Descartes (the age of the gentleman) and G E Moore (the age of the professional).

LEVI, Albert William. *The Humanities Today*. Bloomington Indiana Univ Pr 1970.

The author seeks to reconcile the history of the humanities, his definition of the humanities, and the practices of those who teach the humanities.

LEVI, Albert William. Edward Bellamy: Utopian. *Ethics* 55,131-144 Ja 45.

LEVI, Albert William. The Meaning Of Existentialism For Contemporary International Relations. *Ethics* 72,233-251 Jl 62.

LEVI, Albert William. The Quixotic Quest For Being. *Ethics* 66,132-136 Ja 56.

LEVI, Albert William. The Two Imaginations. *Phil Phenomenol Res* 25,188-200 D 64.

Levi illustrates two views of the imagination in Western thought by alluding to Aristotle and Shakespeare; the former holding that sensations are synthesized in the vat of imagination and processed into essences or concepts by abstraction, and the latter holding imagination to be inspiration and conceptualizing is essential rather than existential. He considers the Kantian solution and the Phenomenological-existential solution; the former where imagination mediates between sensation and thought (the synthesis being a mystery) and the latter, which he endorses, where imagination is creative of organic wholes, is teleological and dramatic.

LEVI, Albert William. The Value Of Freedom: Mill's Liberty (1859-1959). *Ethics* 70,37-46 O 59.

LEVI, Albert William. The Writing Of Mill's *Autobiography*. *Ethics* 61,284-296 Jl 51.

LEVI, Albert William. Wittgenstein As Dialectician. *J Phil* 61,127-138 F 64.

The paper argues that a close reading of Wittgenstein dispels the underlying assumption that the *Tractatus* and the *Philosophical Investigations* are incongruous and (therefore) that the philosophy of Wittgenstein is disjunctive. The evidences of the intermediate *Remarks on the Foundations of Mathematics* attest to continuity in Wittgenstein's philosophical development. What is revealed is an inherently dialectical mentality, momentarily stunned by the systematic vision with which *Principia Mathematica* had for three decades dazzled the European mind, until, rudely jarred awake by Goedel's 1931 paper, it could resume the dialectic.

LEVI, Edward H. *An Introduction To Legal Reasoning*. Chicago Univ Of Chicago Pr 1948.

LEVI, Isaac. *Gambling With Truth: An Essay On Induction And The Aims Of Science*. NY Knopf 1967.

LEVI, Isaac and Morgenbesser, Sidney. Belief And Disposition. *Amer Phil Quart* 1,221-232 Jl 64.

LEVI, Isaac. Belief And Action. *Monist* 48,306-316 Jl 64.

The article raises the question of the relation between ethics and science, or the relevance of the results of science to the choice of policies for realizing goals already selected. It considers three conflicting points of view: (1) "naive cognitivism", (2) "behavioralism", and (3) "critical cognitivism", opting primarily for the latter.

LEVI, Isaac. Decision Theory And Confirmation. *J Phil* 58,614-624 O 61.

Seeking an alternative to behavioralism, the author explores the possibilities of extending the applicability of decision theory from the domain of inductive behavior into that of inductive inference. He employs the Bayes method of maximizing expected utility to suggest a way in which a conceptual scheme devised for stating criteria for deciding what to do in the face of risk or uncertainty might be extrapolated to the case of deciding what to believe, without reducing belief to action relative to practical objectives. He then uses the Bayesian method in a critique of rules for accepting hypotheses that are based on nonprobabilistic measures of confirmation—in particular Popper's "degree of corroboration."

LEVI, Isaac. Deductive Cogency In Inductive Inference. *J Phil* 62,68-76 F 65.

Levi introduces an "inductive acceptance rule" to indicate 'how probabilities can be related to rational acceptance and rejection in a manner compatible with the principle of deductive cogency without leading to the view that a probability of one is necessary and sufficient for rational acceptance,' and to indicate "why high probabilities are not sufficient and, perhaps, not necessary for rational acceptance." He does this by discussing treatments by Lehrer and Sleigh, and by Kyburg, of difficulties lurking in Chisolm's book *Perceiving*.

LEVI, Isaac. Hacking Salmon On Induction. *J Phil* 62,481-487 S 65.

The article concerns Hacking's having joined the host of critics of the Reichenbach-Salmon program for vindicating induction. Levi agrees with Hacking in criticizing those who think if Goodman's riddles about 'grue' could be solved, Salmon's attempted vindication of the straight rule would be convincing. But Hacking's own grounds for his contention do not establish his point. The first of his objections to Salmon's approach misses the mark entirely; the second, though sound and important, seems to disavow his own declared intention of waiving the difficulties raised by Goodman's riddles.

LEVI, Isaac. Must The Scientist Make Value Judgments? *J Phil* 57,345-356 My 60.

The author argues against the claim that a scientist must take the seriousness of mistakes into account to accept or reject hypotheses where the seriousness of mistakes is relative to practical objectives. Moreover, even if this claim were correct, the author contends, the value-neutrality thesis would not entail the abandonment of the view that scientists accept or reject hypotheses. In the author's view, the tenability of

the value-neutrality thesis depends upon whether the canons of scientific inference dictate assignments of minimum probabilities in such a way as to permit no differences in the assignments made by different investigators to the same set of alternative hypotheses.

LEVI, Isaac. On The Seriousness Of Mistakes. *Phil Sci* 29,47–65 Ja 62.

LEVI, Isaac. Putnam's Three Truth Values. *Phil Stud* 10,65–68 1959.

H Putnam, in arguing for three-valued logic, has laid down certain requirements for the terms 'true' and 'false': (1) they must be "tenseless" predicates, (2) they must not be defined in terms of "epistemic" predicates such as 'verified' and 'falsified', and (3) statements that are accepted as verified are called 'true' and statements that are rejected are called 'false'. The author argues that even if the truth-value concepts of a language embedded in three-valued logic meet Putnam's requirements, they must, at the same time, be translatable into a language with a two-valued logic. He concludes that a consideration of the kinds of translations available would indicate a dim future for three-valued logic.

LEVICH, Marvin. *Philosophy And History: A Symposium* (Edited By Sidney Hook). *Hist Theor* 4,328–348 1965.

LEVICH, Marvin and Halewood, William H. *Houyhnhnm Est Animal Rationale*. *J Hist Ideas* 26,273–281 Ap–Je 65.

The authors examine Swift's description of the Houyhnhnms in *Gulliver's Travels*, and evaluate critical discussions of the significance of the Houyhnhnm. This article believes that Swift thought the life of reason, exemplified by the Houyhnhnms, is also possible for men. The authors conclude that Swift's principal source for the rational definition of man was probably the contemporary cliché of God giving the gift of reason to man, which gave man domain over all other creatures.

LEVICH, Marvin. Disagreement And Controversy In History. *Hist Theor* 2,41–51 1962.

LEVICH, Marvin. Form And Content In Poetry. *J Phil* 56,586–595 Je 59.

LEVIN, David Michael. *Reason And Evidence In Husserl's Phenomenology*. Evanston IL 1970.

The work develops and criticizes Husserl's concern with adequate and apodictic evidence and traces the modifications of this concern throughout the Husserlian corpus. Levin's thesis is that the demand for apodictic evidence is intrinsically untenable. This work is significant not only because of its rigorous dealing with the problem of *Evidenz* but also because tangentially and in passing it gives a sense of the direction of the development of Husserl's thought as a whole.

LEVIN, Flora R. *The Harmonics Of Nicomachus And The Pythagorean Tradition*. University Park PA. 1975.

LEVIN, Michael E. Wittgenstein In Perspective. *Social Research* 40,192–207 Spr 73. I explain that the *Tractatus* began with an account of logical truth as tautological, but as reflecting something about reality. In his later writings Wittgenstein went beyond this, not only to say that logical truths are true by definition, but to note that the definition of a term is not a phenomenon independent of the truths in virtue of which they were true. The presence of certain concepts and the truth of certain theses are the same phenomena. Pears thinks this precipitates anthropocentric relativism, but I argue that it does not. I end by sketching Wittgenstein's reasons for rejecting a logically private language of sensations.

LEVIN, M. On Explanation In Archaeology: A Rebuttal To Fritz And Plog. *American Antiquity* 38,387–395 O 73.

This paper argues that the recommendation by Fritz and Plog—that archaeologists adopt the Hempel model of explanation—mistakes a conceptual explication for a substantial recommendation. This error results in advocacy of tautologies. The examination of this error leads to the question of logical inference, justification of the Hempel model, the theory-ladenness of archaeological classifications, the epistemology of the laws of the data-language, and the relation of the Fritz-Plog research program to the generation and verification of worthwhile hypotheses in archaeology.

LEVIN, Nathan P. Computational Logic. *J Sym Log* 14,167–172 S 49.

LEVIN, Samuel M. Malthus And The Idea Of Progress. *J Hist Ideas* 27,92–108 Ja–Mr 66.

The author believes that Malthus' idea of progress is based on his concern for the improvement of society. Malthus believes that the notion of progress for society carries with it the possibility of retrogression, since poverty is such an oppressive force. Even evil can be part of progress, if it prompts a strong reaction by encouraging the creation of mind. Malthus' theory of progress is then examined from this perspective.

LEVINAS, Emmanuel. On The Trail Of The Other. *Phil Today* 10,34–47 Spr 66.

LEVINAS, Emmanuel. Signature. *Phil Today* 10,30–33 Spr 66.

LEVINGER, Elma Ehrlich. *Galileo, First Observer Of Marvelous Things*. NY Messner 1952.

LEVINSON, Ronald B. *In Defense Of Plato*. Cambridge Harvard Univ Pr 1953.

Starting from attacks by Popper and Crossman, Professor Levinson of the University of Maine builds his defense around the integrity of Plato as artist, moralist, and prophet. The conclusion of his chapter "Was Plato a totalitarian?" denies many counts of the common charges to that effect, but concedes that his political ideal could be called totalitarian in Sabine's carefully guarded sense of a government which "obliterates the distinction between areas of private judgement and public control." The author provides sixteen appendices on minor aspects of his subject, and a bibliography.

LEVISION, A B. Logic, Language, And Consistency In Tarski's Theory Of Truth. *Phil Phenomenol Res* 25,384–392 Mr 65.

The author directs attention to a curious discrepancy in the usual ways of interpreting Tarski's theory of truth and discusses his alleged teaching that "ordinary language is inconsistent." The claim is made that Tarski does not argue that a natural language does not differ in principle from a formalized one, nor that ordinary language is inconsistent, as his critics aver. It is shown that Tarski believes we have no criteria for precisely distinguishing what is true or false from what fails to be either, outside the context of a formalized language. General observations are made about the relation between ideal or formal logic and ordinary language and it is concluded that in ordinary language the ideal of logical structure is incomplete or unfulfilled.

LEVISION, Arnold B. Frege On Proof. *Phil Phenomenol Res* 22,40–49 S 61.

Frege presupposed a connection between proof and metaphysics. An acceptance of his view of proof entails an acceptance of a rationalistic metaphysics, and, in particular, that arithmetic statements depend on "primitive truths." The author compares this with Wittgenstein. Both thinkers agree that mathematical statements are established by thought alone, but disagree as to the significance of establishing something by thought alone. Frege emphasized the contrast between the process of proving a statement and process of coming to learn the meaning of a statement, whereas linguistic philosophy emphasizes the similarity of the two processes. Although linguistic philosophy denies such things as self-evident truths, the author thinks that Frege's Platonism is a better alternative, since linguistic philosophy has not offered a satisfactory substitute which can account for mathematical knowledge.

LEVISION, Arnold Boyd. *Knowledge And Society: An Introduction To The Philosophy Of The Social Sciences*. Indianapolis Pegasus 1974.

This book explores the epistemological problems implied in the kind of knowledge which characterizes the social sciences. The central problem is stated as that of the relationship between "interpretationism" exemplified by Max Weber and "empiricism" represented by Hume and his followers down to Quine.

LEVISION, Arnold B. Professor Scheffler On Falsifiability And Meaning. *Phil Stud* 16,76–78 1965.

The article takes up I Scheffler's analysis of Popper's position on falsifiability and meaning, pointing out that neither Popper nor the positivists were originally concerned with an arbitrary or stipulated definition of the term, 'metaphysics', as Scheffler suggests. The author states that Scheffler argues erroneously in claiming that "Popper's intended line of demarcation between science and metaphysics depends upon the notion of significance, which is thus presupposed by him for the solution of his own problems." He argues that, for the purposes of the philosophy of science, the notion of significance might very well be taken as primitive and unanalyzable.

LEVISION, Arnold B. The Uses Of Philosophy And The Problems Of Educators. *Educ Theor* 11,123–128 Ap 61.

LEVISION, Arnold. The Concept Of Proof. *Monist* 48,547–566 O 64.

The purpose here is to develop Hume's suggestion that we ought to recognize a class of arguments falling between "demonstrations" or formally valid arguments and "probabilities" or inductive arguments, and to view informally valid statements as "proofs" in that they "leave no room for doubt or opposition." On the grounds that we should "conform our language more to common use" and by distinguishing two senses of "predictive" statements, the author shows why Hume's suggestion is worth developing.

LEWIS, Clarence Irving. *An Analysis Of Knowledge And Valuation.* La Salle IL Open Court 1947.

LEWIS, Clarence Irving. *Our Social Inheritance.* Bloomington Indiana Univ Pr 1957. Other animals may be social, but man's social inheritance grows and cumulates; and he is self-critical. He has not one heredity, but a choice of which line of heredity he will develop. Therefore imagination becomes a force, and language takes man out of the present because of its infinite adaptability, and its storehouse of past achievements. Man's main problem is self-control rather than conquest of nature. Hence he needs objective standards of morality if he is not to destroy himself, but these moral standards themselves are discovered, not merely inherited.

LEWIS, Clarence Irving. *The Ground And Nature Of The Right.* NY Columbia Univ Pr 1955.

Professor Lewis extends his treatment of the good or valuable (Part III of *An Analysis of Knowledge and Valuation*) to the concept of the right in these five lectures making up the fifth volume of the Woodbridge Lecture series at Columbia University. He finds "at the root of all the imperatives of our thinking and doing the Law of Objectivity," which may be further subdivided into the Law of Compassion and the Law of Moral Equality. All are grounded in "that character of human nature by which it is called rational," thus combining a naturalistic conception of values with a rationalistic foundation for moral principles.

LEWIS, Clarence Irving. *Values And Imperatives.* Stanford CA Stanford Univ Pr 1969. This volume contributes substantially to a clarification of his views concerning ethics and theory of value. The major part of the book is a series of four lectures, "Foundations of Ethics," which present most of the central theses of Lewis's naturalistic theory of value and ethics, and a criticism of emotivist theories. The six papers and lectures that make up the rest of the book deal with such matters as the nature of value and the relation of values to facts, the pragmatic basis of the normative, the compatibility of pragmatism with moral rigor, Lewis's conception of ethical imperatives as contrasted with that of Kant, and two previously published papers: "The Rational Imperative," and "The Meaning of Liberty."

LEWIS, Clive Staples. *Miracles; A Preliminary Study.* NY Macmillan 1947.

LEWIS, David K. An Argument For The Identity Theory. *J Phil* 63,17-25 Ja 66.

The (Psychophysical) Identity Theory—according to which experiences are contingently identical with some physical states, e.g., neural states—is a consequence of two premisses which many of us would accept. First, that any sort of experience is definable as the occupant of a characteristic causal role; i.e., as whatever state it is—of whatever nature—which has a characteristic syndrome of typical causes and effects. Some of these definitive effects of experiences are behavior and hence involve physical phenomena. Second, that purely physical causes are adequate to explain physical phenomena insofar as they can be explained at all. *A fortiori*, the causes of those physical phenomena which are among the definitive effects of experiences must be physical.

LEWIS, David K and Richardson, Jane Shelby. Scriven On Human Unpredictability. *Phil Stud* 17,69-73 1966.

In this article, Michael Scriven has argued that we are unpredictable: if I want to foil your attempts to predict me, I can in principle replicate your prediction and do the opposite. But Scriven assumes that it is possible both that you have time to finish your prediction (else your failure is of no significance) and that I have time to finish my replication (else you might not fail). This assumption is suspect, since the times consumed by our two tasks are increasing functions of each other.

LEWIS, David K. Percepts And Color Mosaics In Visual Experience. *Phil Rev* 75,357-368 R 66.

Roderick Firth, in his "Sense-Data and the Percept Theory," opposes his own theory that visual experience consists of *percepts* of ostensible external objects or facts to the

old-fashioned theory that it consists of a mosaic of color-spots. I claim to resolve the opposition thus: Call two visual experiences *modification-equivalent* if they are connected by a chain of actual or possible visual experiences such that, given any two adjacent members of the chain, one can pass from one to the other with change of percept but no percept of change. We often ignore differences between modification-equivalent visual experiences. Some visual experience, at least, consists of a percept of a color-mosaic; it is plausible that any visual experience is modification-equivalent to experiences of some definite color-mosaic. If so, then any visual experience is indistinguishable from color-mosaic experience for some practical purposes.

LEWIS, David. *Convention: A Philosophical Study.* Cambridge Harvard Univ Pr 1969.

Social conventions are analyzed, roughly, as regularities in the solution of recurrent coordination problems—situations of interdependent decision in which common interest predominates. An example is our regularity of driving on the right: each does so to coordinate with his fellow drivers, but we would have been just as well off to coordinate by all driving on the left. Other examples are discussed; conventions are contrasted with other sorts of regularities; conventions governing systems of communication are singled out for special attention. It is shown that the latter can be described as conventions to be truthful with respect to a particular assignment of truth conditions to sentences or other units of communication.

LEWIS, Douglas and Addis, Laird. *Moore And Ryle: Two Ontologists.* Iowa City Univ Of Iowa 1965.

This book consists of two essays which, though not directly referring to each other, yet are both devoted to the same problem. For both Moore and Ryle proclaimed an ontology rejecting the existence of minds. In the first essay devoted to Ryle's book *The Concept of Mind*, Addis tries to refute Ryle's two crucial arguments against the existence of minds. Addis completes his study with an attempt to exhibit the two sources of Ryle's materialism: an inadequate ontology and an inability to solve the problem of intentionality. In the second essay D Lewis examines the realism of Moore. This position can be expressed in two statements: Material objects are substances (a), Material objects exist independently of our awareness of them (b). Lewis tries: (1) to make clear what Moore means by the terms "substance" and "independent," (2) to show that with these meanings both (a) and (b) are false. At the same time Lewis uncovers the mistakes of Moore's analyses in an attempt to illuminate the inadequacy of Moore's realism.

LEWIS, Evan L. *The Individual And Society.* NY Exposition Pr 1949.

The book is concerned with that area within the social organism in which social organization impinges upon the private life of individuals. The place of the average man in society and its effects on him personally, culturally and economically are discussed. This final chapter discusses the religious, intellectual and emotional components of society as differentiated from basically political and economic ones.

LEWIS, Ewart. *Medieval Political Ideas, 2v.* NY Knopf 1954.

LEWIS, Ewart. Medieval Thought And Western Political Tradition. *Thought* 37,173-193 Je 62.

LEWIS, Ewart. Natural Law And Expediency In Medieval Political Theory. *Ethics* 50,144-163 Ja 40.

LEWIS, Gordon R. Augustine And Existentialism. *Bull Evangelical Theol Society* 8,13-22 nd.

This article is an attempt to determine whether Augustine was an existentialist, contains the roots of existentialism, or whether existentialism is something uniquely modern. Utilizing Paul Tillich's distinctions, Augustine is found to have an existential point of view, and an existentialist attitude, but not an existentialist philosophy. Rather, he defends an essentialist epistemology and ontology. His emphases on the priority of the particular over the universal and of faith over reason must be interpreted consistently with his essentialist view of the Logos of God, eternal Wisdom.

LEWIS, Gordon R. Linguistic Analysis And Paul's Athenian Address. *Foundations* 8,311-322 nd.

If one were to analyze a classic sample of ancient religious literature like St Paul's address to the Stoic and Epicurean philosophers in Athens, what uses of religious language are found? The varied theories of philosophical analysts are tested by the grammatical, historical context. Paul's assertions concerning God's non-physical existence as Lord and Judge of all were hardly given or taken as tautological nonsense or falsehood. The negative and affirmative assertions conveyed cognitive information about God and His relation to history. In addition, they had emotive overtones, evoked experience of God, witnessed to divine-human encounters and inspired existential experience.

LEWIS, H. D. *Freedom And History.* NY Macmillan 1962.

This work includes the following articles (the majority of which have already appeared in periodicals): Does the Good Will define its own content? (a study of T H Green); The Idea of a Universal Mind; Individualism and Collectivism; T H Green and Rousseau; Conscience and Dissent; Extreme views about History; the Historian and his Interests; Can History be Objective?; History and the Gospel; Faith and History; Freedom and Responsibility, Responsibility and Mental Health; The Moral Status of Man; Faith and Freedom; Freedom and Immortality; and What is Theology?

LEWIS, H. D. Buddha And God. *Monist* 47,315-334 Spr 63.

The author discusses: the status of Buddhism as a religion, the question of whether or not Buddha was an atheist, and the relation between Buddha and Christianity with respect to the quest for moral excellence and enlightenment, and the nature of God. The author's remarks are based on his understanding of the Pali Canon.

LEWIS, H. D. Can History Be Objective? *Int Phil Quart* 2,219-243 My 62.

- LEWIS, John (ed).** *Beyond Chance And Necessity: A Critical Inquiry Into Professor Jacques Monod's Chance And Necessity*. Atlantic Highlands NJ Humanities Pr 1974. Jacques Monod's book *Chance and Necessity* is here examined by eleven critics. The latter represent philosophy and physics, molecular biology and genetics. There is general agreement with Monod on the need for natural explanation of life and man, without involving vitalism or animism. But the contributors take a broader view of living nature and plural modes of investigation, in order to counter Monod's two further moves of reductionism and "Cartesian" dualism.
- LEWIS, John Underwood.** The Basis Of Positive Law: An Essay Toward The Advancement Of 'Integrative Jurisprudence'. *Monist* 49,443-457 Jl 65. This paper makes an attempt at an initial integration of philosophy and legal theory. The integration is effected through the presentation of a fundamental theory of man-discovered law—that law which is characterized formally by a justice which, as Ernest Barker says, "human authority expresses, or ought to express—but does not make...." In the presentation of the theory, three points are discussed: (1) It is shown how the notion of man-discovered law can be said truly to constitute a species of law. (2) Next, the reality of man-discovered law and man's purported knowledge of it are considered. (3) Finally, the relations between man-made and man-discovered laws, on the one hand, and man-discovered laws and moral precepts, on the other, are made explicit.

- LEYS, Wayne A R.** *Ethics And Social Policy*. NY Prentice-Hall 1941. This volume offers a very stimulating review of the most important problems confronting modern man as a social being. These problems cover the entire range of contemporary life and are treated from the standpoint of man's desire for ethical conduct, with past and present ethical theories as guides. These theories are examined, in turn, from the standpoint of modern life, its trials and lessons.
- LEYS, Wayne A R and Perry, Charner Marquis.** *Philosophy And The Public Interest*. Chicago 1959. The purpose of this pamphlet is to formulate the problems of, and to stimulate thought and discussion on, the concept of the public interest. The authors present a number of common and current theories on the nature of public interest, its relation to earlier, similar ideas, and its significance as a part of political theory.
- LEYS, Wayne A R.** Justice And Equality. *Ethics* 67,17-24 O 56.
- LEYS, Wayne A R.** Was Plato Non-Political? *Ethics* 75,272-276 Jl 65. Plato ought not to be regarded as being either for or against totalitarianism. He is rather non-political or anti-political, if politics is defined in terms of human conflict and disagreement, even though in some sense he has a political philosophy. Plato is most accurately read as wanting to avoid the political, and enjoining abstinence from politics.
- LEYS, Wayne Albert Risser.** *Ethics For Policy Decisions; The Art Of Asking Deliberative Questions*. NY Prentice-Hall 1952. This volume discusses the practical application of ethics to a wide range of policy issues. In the first part of the book the author explains the tools of ethical analysis and surveys the major classical systems of ethics. Part II illustrates the application of these tools in actual case studies. The case studies are real and timely.

- LIDDELL, Brendan E A.** Freedom Without Responsibility. *Rendezvous* 2,53-59 Spr 67. An analysis of motive and meaning in using the expression, "Freedom without responsibility is license." The statement is meaningless as an assertion, since

"freedom" cannot have meaning outside some context (political, moral, etc.). Within a context, "freedom" means permission to act without restraint in some way, eliminating the possibility of license. The expression, when used, is almost always meant to pressure another to accept a socio-moral structure although adequate grounds for prohibition are absent.

- LIDTKE, Vernon L.** August Bebel And German Social Democracy's Relation To The Christian Churches. *J Hist Ideas* 27,245-264 Ap-Je 66.

The thesis of this article is that the relationship between the German Social Democratic movement and Christian churches in the Nineteenth century has not been adequately analyzed. Previous studies do not discuss the failure of the Christian churches to retain the loyalty of the working classes. By examining the life and writings of August Bebel, the author investigates the popular conception of socialism as it imitated religious modes of thought. The author's conclusion is that Bebel left Christianity for social rather than intellectual reasons, thereby exhibiting a common action for Nineteenth century German men.

- LIEB, Irwin C (ed).** *Experience, Existence, And The Good: Essays In Honor Of Paul Weiss*. Carbondale S Illinois Univ Pr 1961.

There is a main argument of the twenty essays: that understanding each order depends on understanding the other orders. The introductions done by the Editor, Irwin C Lieb, integrate the seven essays on Experience, seven on Existence, six on The Good. This is indeed "a most unusual kind of *Festschrift*. Metaphysicians show the influences of both continental European phenomenology and British linguistic analysis, and they are aware of both historical traditions. There are phenomenological analyses of experience, love, freedom, and guilt. Essays on purpose, reductionism, *chronos* and *kairos*, show linguistic techniques.

- LIGHTSTONE, A H.** *Symbolic Logic And The Real Number System*. NY Harper & Row 1965.

This book provides a basic presentation of symbolic logic, of sets, of abstract algebra and axiomatic method, and of number systems including: the natural number system, the system of integers, the rational number system, the real number system, and concludes with the development of the limit concept. The book presupposes some background in mathematics but none in symbolic logic. The book, with exercises integral to its development, provides a basic development of its topics and introduction to the logical foundations of mathematics.

- LIGHTSTONE, A H.** *The Axiomatic Method: An Introduction To Mathematical Logic*. Englewood Cliffs NJ Prentice-Hall 1964.

This is a sophisticated text in logic that is intended for students of mathematics. The book contrasts formal logic (the theory of deduction) with the treatment of algebraic system. Its goal is to show that any theorem which can be established in an algebraic system can also be obtained by applying the theory of deduction to postulates characterizing the system—this is accomplished by a proof of Henkin's Completeness Theorem. Models are employed in dealing with predicate calculus; an Appendix discusses some characteristics of complete theories.

- LILGE, Frederic.** *The Abuse Of Learning: The Failure Of The German University*. NY Macmillan 1948.

The author points out some of the roots of Nazism in educational theories over the

past centuries of German thought. He gives a picture of these centuries—from the eighteenth to Nazism and its aftermath—with especial emphasis upon the works in education of the writers discussed. The author ends with a glimpse of the de-Nazified faculties, but he is not too optimistic that the lessons of extreme irrationalism and the neglect of humanism have been learned in Germany—or elsewhere for that matter.

LINDBLOM, Charles E. *The Intelligence Of Democracy: Decision Making Through Mutual Adjustment*. NY Free Pr 1965.

To achieve "partisan mutual adjustment" people do not require a central coordinator, a dominant common purpose, or an intention to coordinate. Adjustment occurs through one person's adapting to or manipulating another. In democratic government, these processes are combined variously with central coordination. Independent, partisan decision-makers, though their complex decision is disjointed and incremental, produce rational (realistic) results. The claims commonly made for central coordination of decisions can thus be doubted. Mutual adjustment facilitates agreement among partisans on values and decisions, in contrast, at points, to central systems.

LINDBLOM, Charles E and Braybrooke, David. *A Strategy Of Decision: Policy Evaluation As A Social Process*. NY Free Pr 1963.

A philosopher and an economist here join forces to develop an improved strategy of decision and a rehabilitated utilitarianism. Despite the growth of literature in decision theory, keen dissatisfaction with that theory has often been expressed. The authors emphasize the disharmony between the actual practices of those making policy decisions and the idealized theories that are supposed to furnish guiding principles. A major difficulty is that the kind of situation required by the idealized theories just does not occur in practice. A new strategy of decision is proposed, therefore, that is based on the procedures actually used in successful decision making. In general, important problems are analyzed into a series of smaller problems which can be given separate treatment. At each successive stage it is possible to correct for undesirable consequences flowing from earlier decisions. Much emphasis is placed on the role of marginal advantages in the selection among alternatives.

LINDLEY JR, T Foster. The History Of Historiography. *Personalist* 37,379–387 Autumn–O 56.

LINDLEY, T F. 'True' And 'False'. *J Phil* 61,387–394 Je 64.

In this paper F P Ramsey's claim, that to say of p that it is true is to assert p , is restated and applied to (a) "What I am saying is false," (b) "a statement is true if....," and (c) "Every statement is either true or false. As a consequence, (a) is shown to be a self-interpreting formula which can never be satisfied, (b) is shown to be incapable of

generating a theory of truth and although (c) is shown to be about everything that has ever been mentioned in a statement, it says nothing at all since it violates the Law of Excluded Middle by being neither affirmative nor negative. This last finding means that " $p \vee \neg p$ " does not take statements as values and that Ramsey's view has a far broader application to the logic of truth functions than has been recognized heretofore.

LINDLEY, T F. Indeterminate And Conditional Truth-values. *J Phil* 59,449–458 Ag 62. Philosophers of a skeptical persuasion frequently say of indicative statements that their truth-value is indeterminate, unknown, or conditional. The present paper argues that while there are (1) sentences with indeterminate truth-values and (2) others in which truth-conditions are specified, no such sentence is (3) a fully interpreted indicative statement. The paper attempts first to draw out the distinctions among these three kinds of expressions and then, by contrasting them, to show that the epistemological vacillation conveyed by the claim is grounded in a grammatical circumlocution.

LINK, Michael A. *The Social Philosophy Of Reinhold Niebuhr*. Chicago Adams Pr 1975.

This book traces the social philosophy of Reinhold Niebuhr from 1920 to 1971. The book treats with the great variety of sources Niebuhr drew upon in his quest for a social philosophy, the importance of the study of history to Niebuhr's social thought, and the many changes Niebuhr's social theory underwent. The book makes the point that although Niebuhr made extensive use of historical evidence he was not always accurate in doing so. Despite the fact that Niebuhr made several historical blunders, these do not "per se" invalidate his social philosophy, but they are disturbing to one who values the study of history. Finally, the book agrees with Arthur Schlesinger's interpretation of Niebuhr as being a thinker who synthesized his own version of "liberal" Christianity with pragmatism. This synthesis resulted in a social philosophy that can accurately be described as a very eclectic and very "Niebuhrian."

LINSKY, Leonard. Substitutivity And Descriptions. *J Phil* 63,673–683 N 66.

The article discusses substitutivity and description vis a vis the following puzzle introduced by Russell in "On Denoting": (1) Scott is the author of *Waverly*, (2) George IV wished to know whether Scott was the author of *Waverly*, and (3) George IV wished to know whether Scott was Scott. Why does this conclusion not follow from the premises? Linsky raises some questions about Russell's solution to this puzzle.

LINSKY, Leonard. Substitutivity. *J Phil* 62,139–144 Mr 65.

The principle of substitutivity is this: "Given a true statement of identity, one of its two terms may be substituted for the other in any true statement and the result will be true." There are well known counter-examples, hence the principle must be amended to apply exclusively to terms in referentially open positions. But so amended the principle appears entirely empty; for a referentially opaque position is just one for which the unamended principle fails to be a valid mode of inference. Defenders of the principle will argue that it is merely explicative of the concept of reference but the difficulty is that the concept of reference appealed to seems to involve nothing beyond the principle which is supposed to explain it. The verdict of the uncaptive intellect would seem to be that the principle is just false.

LIPPMAN, Edward A. *Musical Thought In Ancient Greece*. NY Columbia Univ Pr 1964.

The author has brought together a vast array of sources and scholarship to study Greek speculations about music. He places this art in its aesthetic setting and examines its broader role in ancient Greek culture. Individual chapters are given to the following basic themes: conceptions of harmony, theories of musical ethics, the philosophy and aesthetics of music, and the contributions of Aristotle and his school. Considerable attention is given to Plato.

LIPPMANN, Walter. *Essays In The Public Philosophy*. Boston Little, Brown 1955.

A veteran journalist speaks as philosopher in two lengthy essays, "The Decline of the West" and "The Public Philosophy." The first portrays the political failure of Western democracies to cope with the crises of the present century because of too great subservience to untrustworthy public opinion on the part of elected executives. There has been a loss of "all the illusions of intrinsic majesty", and "evaporation of the imperdurable powers" of government. The second essay is a hymn to *jus naturale redivivus* as the only hope of restoring public spirit and allegiance to "the principles of right behavior in the good society, governed by the Western traditions of civility."

LIPPMANN, Walter. Man's Image Of Man. *Proc Cath Phil Ass* 17,66–75 1941.

LIPSET, Seymour Martin (ed) and Hofstadter, Richard (ed). *Sociology And History: Methods*. NY Basic Books 1968.

LIPSHIRES, Sidney. *Herbert Marcuse: From Marx To Freud And Beyond*. Cambridge MA Schenkmann 1974.

The author presents both an exposition and a critique of Marcuse's thought, tracing its evolution from the 1920's to the present. He briefly treats Marcuse's "Hegelianized version of Marxism" and his relationship to the "Frankfurt school" of social science. The book deals mainly with Marcuse's effort to discover in Freud a new dynamic of social change based upon man's instinctive life. Marcuse wants to show the possibility of liberation as necessary for civilized order.

LIPSKY, George A. *John Quincy Adams: His Theory And Ideas*. NY Crowell 1950.

"This is the neglected aspect of the man's greatness to which George A Lipsky calls our attention in this admirably thorough analysis." He was not a systematic political theorist, but his fundamental principles for our national and international political practice can be and are here admirably gleaned, expounded and summarized by the author. "The public good was unquestionably the goal of all his public actions... his humanity and charity deepened as he grew older, even though the asperity of his temper may have been sharpened." As a fundamental tenet of his position, the

author points out the extent to which Adams clung to natural law doctrines, though this view was weakened in his system of thought as religious doubts perplexed him.

LITTLE, Arthur. *The Nature Of Art Or The Shield Of Pallas*. NY Longmans Grund 1946.

LITTLE, Lawrence C. *Foundations For A Philosophy Of Christian Education*. NY Abingdon Pr 1962.

The author proposes to develop a philosophy of Christian education which, he asserts, advances beyond the most contemporary attempts of Fundamentalism, Modernism, and Neo-Orthodoxy to provide an intellectual framework in which the Christian faith can express itself. Little attempts a reconstruction of Christian doctrine "through an intensification of Christian experience and a more realistic interpretation of this experience in terms of contemporary thought through the pooled insights of thinkers who are specialists in a variety of disciplines." He calls for collaboration and communication, particularly between theology and psychology, to revolutionize the current philosophies of Christian education.

LITTMAN, Richard A. A Reply To Professor Mandelbaum's Note On "Anthropomorphism In Psychology". *J Phil* 40,374–377 Jl 43.

LITVINOFF, Valentina. *The Use Of Stanislavsky Within Modern Dance*. NY Am Dance Guild 1972.

The author's thought and approaches in dance are initiated through the impetus of the Method of Physical Action, Stanislavsky's final philosophy of the theatre artist's process of creative work. The author elaborates the philosophy and extends its implications to elements native to dance art. Aesthetic problems in choreography, in the teaching of dance, and viewpoints of the dancer and those of the audience are among the themes discussed in this context.

LITVINOFF, Valentina. "In Search Of First Principles" in *Dance Research Monograph One, 1971–1972*, 164–180. NY CORD 1973.

This is an attempt to formulate a basis for evaluating body usages and movement patternings in dance. Two entities, the art of dance (encompassing the heritage of the past and the viewpoint of historicity focused upon body usage in diverse forms) and science of movement (contemporary disciplines concerned with body movement and the body in movement), are juxtaposed. The new disciplines open a new view for examining body usages within the old heritage. Comparisons and assessments issuing from this examination may be instrumental in modifying developments within the unclassical and evolving form of modern dance.

LITVINOFF, Valentina. Matters Of Style (Four Variations On The Theme). *Dance Scope* 7,14–27 Spr–Sum 73.

Selected forms are examined in order to find internal basic energies and structures applicable to developments within contemporary dance. Turkish Whirling Dervishes are an example of Concentration of Energy, among several other relevant attributes. African dance forms exemplify Extensions of Energy. Spanish dance is seen as Delineation of Energy. Directions of Energy are epitomized in several sensibilities of the basic beat which are described as a physical experience of rhythmicity. A theoretical interpretation emerges of several physical aspects of rhythm. Conclusion: The type of study suggested will yield insights of significance for aesthetics and the practice of modern dance.

LITVINOFF, Valentina. Of Sweigard, Body Education, And Kindred Things. *Dance Scope* 10,51–64 Wint 76.

Similarities and differences among several dominant studies in body movement are explored in what is likely the first attempt at comparison within this area. The article reveals contradictions in philosophical bases, points to divergences in methodologies and to a frequent lack of awareness of mutualities among exponents of the studies. Conclusion: a dialogue among the chief theoreticians in studies of movement could be instrumental in identifying the field as well as in lending greater clarity to theories of human movement. Dance and theatre arts would particularly benefit by such a dialogue.

LIU, Chun-Jo. *Controversies In Modern Chinese Intellectual History*. Cambridge MA East Asian Res Ctr 1964.

This is a valuable collection of references in Chinese and English to the following issues: (1) literary, (2) social, (3) political, (4) intellectual, and (5) the following sub-issues: The Vernacular Movement, Emancipation of Women, The Kuomintang–Communist Split, The Introduction of Western Philosophy, Socialism, Social History of China, and Dialectical Materialism. There are about 500 items from 115 different journals. Some of the entries are nearly a page long, giving a good description of the main issues involved. The glossary and index are helpful.

LIU, Wu-chi. *Confucius: His Life And Time*. NY Philosophical Lib 1955.

Wu-Chi Liu tells the life-story of Master K'ung against the background of his century, emphasizing his role as an ethical teacher. "Foremost among the mentors of men,

Confucius was also assuredly the most successful—witness the vast number of his immediate disciples and the millions of his later followers, all of them attracted to him not by the promise of reward in a future life, but the genuine goodness of his words in relation to this life."

LIVINGSTON, Donald W (ed) and King, James T (ed). *Hume: A Re-evaluation*. NY Fordham Univ Pr 1976.

Livingston provides an introductory essay which traces the development and re-awakening of Hume scholarship.

LIVINGSTON, H H (ed) and Northrop, Filmer Stuart Cuckow (ed). *Cross-cultural Understanding: Epistemology In Anthropology*. NY Harper & Row 1964.

This book is the publication of the seventeen papers of a 1962 symposium sponsored by the Wenner-Gren Foundation for Anthropological Research, together with records of some of the discussions. Experts in fields as diverse as cybernetics and the history of Greek science converse. Although the papers treat technical topics, the treatments are not technical. Questions such as the possibility of one culture understanding another have practical overtones, being a prelude to finding means for dealing with international problems. Professor Northrop's two chapters are adhesive, and relate contributions concerned with more general issues, like communication theory, and those concerned with specific topics such as the virtually tenseless Burmese language and contract law.

LIVINGSTON, Ray. *The Traditional Theory Of Literature*. Minneapolis 1962.

This is a study of the religious views of Amanda K Coomaraswamy (1877-1947). This Indian mystic believes that works of art are one of the ways by which man can attain true knowledge, which is knowledge of God. Thus the Scriptures are, of course, perfect types of literature. Since the hero of the purest art is always God, and since the hero of a ritual or myth is God, these types of art are superior to the epic, the romance, and the realistic novel. However, *Sir Gawain and the Green Knight* is superior to Dostoevski's *Crime and Punishment* because the epic is a better art form than the realistic novel, a type of debased form that is the result of modern thought. Livingston's method of revealing A Coomaraswamy's gems of wisdom is to quote copiously from his works, but the quotations turn out to be Coomaraswamy's quotations from various writers.

LLEWELYN, J E. *Propositions As Answers*. *Amer Phil Quart* 2,305-311 O 65.

An examination is made of Collingwood's criticisms of so-called 'propositional' logicians like Cook Wilson and Russell who are charged with assuming that meaning, agreement, contradiction, truth, and falsity do not belong only to propositions as the answers to strictly correlative questions. It is doubtful whether these logicians do assume this. Anyway, they would be correct to do so or to assume that these semiotic predicates can be known to apply to propositions without one's knowing to which strictly correlative question each proposition could be an answer. Failure to distinguish accurately what a person says from the topic of his remark and the reference of a word or phrase that he uses leads Collingwood to overlook the difficulty that ambiguity of reference can infect questions no less than assertions. He is himself prey to the fallacy that the logician's proposition is a double of the indicative sentence of traditional grammar.

LLEWELYN, J E. *Three Conceptions Of Faith*. *J Phil* 61,237-243 Ap 64.

According to the most common conception of faith, where q is a straightforward logical implicate of p , 'I have faith that p ' does not imply 'I have faith that q '. The aim of this paper is to describe this lay, or nonepistemological, conception of faith, an epistemological conception of faith, and a pseudoepistemological conception of faith. Measured by the standard of the first, the second upgrades faith, and the third downgrades knowledge; they thus generate paradoxes, and some of these are described.

LOCKE, Don. *Memory*. Garden City NY Anchor Books 1971.

The author rejects the representative theory of memory but also the theory which identifies the alleged memory images with parts of the real past and defends the view that we have a cognition of the past which cannot be assimilated to sense-perception. He distinguishes different senses of the term "remembering" and insists that it must not always be identified with an actual experience or be regarded as a source of evidence on which knowledge is based but rather as itself already a knowing.

LOCKE, Don. *Perception And Our Knowledge Of The External World*. NY Humanities Pr 1967.

LOCKE, Don. *Strawson's Auditory Universe*. *Phil Rev* 70,518-532 O 61.

Locke criticizes Strawson's procedure and conclusions in his chapter on "Sounds" in *Individuals*. Here Strawson considered the possibility of a no-space world in which sounds were the basic particulars instead of material bodies, to shed light on our world which uses space. Locke argues that Strawson's scheme does not tell us much about our present conceptual scheme, and that it is little more than an indication of how it is possible to reduplicate features of our own experience within certain limited parts of that experience.

LOEWENBERG, J. *Dialogues From Delphi*. Los Angeles Univ Of Calif Pr 1949.

This book is an imaginary debate between two laymen in which the recurring problems of the philosophy of art are discussed. The subjects debated include the meaning of comedy and tragedy, the basis of criticism, the relation of art to nature and several others.

LOEWENBERG, J. *Royce's Synoptic Vision*. Baltimore Johns Hopkins Univ 1955.

This book is a commemorative address in celebration of the centennial of the birth of Josiah Royce on November 20, 1855, by Royce's literary executor, Professor Loewenberg, at the invitation of The Johns Hopkins University, where Royce received the degree of Ph D in 1878.

LOEWENBERG, Jacob. *Hegel's Phenomenology: Dialogues On The Life Of The Mind*. La Salle IL Open Court 1965.

In this book J Loewenberg attempts to wrest the secret of at least one major work of Hegel's, namely, *The Phenomenology of Mind*. Loewenberg's book gives us a chapter by chapter discussion of Hegel's enigmatic work. Thus there are interesting and sometimes penetrating observations on behaviorism, logic, hedonism, Kant's categorical imperative, freedom, art, religion, and all the other topics that appear in the *Phenomenology*. Probably the most interesting section of this book occurs in the final chapters where the dialogists attempt to clarify how Hegel's notion of Absoluteness is compatible with his insistence on the eternality of the dialectic. Loewenberg shows us the paradoxes resulting from Hegel's apparently unintentional shifts from phenomenological investigation to ontological speculation.

LOEWENBERG, Jacob. *Reason And The Nature Of Things: Reflections On The Cognitive Function Of Philosophy*. La Salle IL Open Court 1959.

Beginning with a discussion of the necessity of faith in reason, these Carus Lectures call attention to the fact that philosophy possesses a "reflexive" and a "non-reflexive subject-matter." In this latter respect it is like science, differing from it, however, in that it possesses a generic import. The author then goes on to develop his theory of "Dialectical Pluralism," grounding his argument mainly on a critical examination of Descartes, Berkeley, Kant, Leibniz, and Hegel.

- LOFTSGORDON, Donald** and Dewey, Robert E. Dante And Martineau: A Report Of Changing Values. *Ethics* 72,41-45 O 61.
- The assertion that men change their ordering of values in different historical periods is difficult to document. There are from the past, however, two recorded instances of value ranking which can make some claim to be representative of a particular period, and which may be compared with how persons rank values today. A ranking of vices exists in Dante's fourteenth-century *Divine Comedy* and a ranking of the moral worth of motives is contained in Martineau's *Types of Ethical Theory* (1885). The article reports how 858 students ranked these items and records their differences from Dante and Martineau.

- LOFTSGORDON, Donald.** Present-Day British Philosophers On Punishment. *J Phil* 63,341-353 Je 66.
- Many contemporary British philosophers believe that progress in ethics can be achieved through a piecemeal approach which discusses and clarifies specific topics before arriving at more general conclusions. As one test of the success of this method, approximately twenty-five articles and papers written since 1939 by British philosophers on the justification of punishment are examined. For this subject, the piecemeal approach has not been successful. While some clarifying and useful distinctions have been made, the fundamental moral issue between the retributive and utilitarian views remains as unresolved as it was before any of the papers were written.

- LONGERAN, Bernard J F.** *Insight: A Study Of Human Understanding*. NY Philosophical Lib 1957.
- Father Longeran writes from the conviction that by thoroughly understanding what it is to understand, one will understand the structure of all that is and can be understood. Focussing on insight, the very essence of understanding, Father Longeran examines illustrations of insight in mathematics, science, common sense, etc., in order to bring the reader to an insight into insight.
- LONGERAN, Bernard.** *Method In Theology*. NY Herder & Herder 1972.
- LONGERAN, Bernard.** *The Subject*. Milwaukee Marquette Univ Pr 1968.
- The emphasis on the subject in philosophy today stems from a previous period in which the concept of the subject was neglected. The causes of this neglect include a fascination with the objectivity of truth, the rationalist notion of pure reason, and the metaphysical account of the soul. But it must be remembered that while it is objective, truth exists formally and only in judgement. Therefore, without minds there is no truth. Further, the study of the subject, i.e., the study of oneself insofar as one is conscious, is different from the study of the soul, so that it is false to think that to know the soul is to know the subject.

- It has been argued that the concepts of mind, soul, and private experience upon which the problem of other minds is grounded are incoherent, and so philosophical doubt about other minds does not represent a genuine problem to be solved. But there are corresponding difficulties concerning the other half of Cartesian dualism, the philosophical concept of a human body. I argue that the concept of a body required for stating the traditional problem of other minds and its solutions cannot be intelligibly introduced and consequently the alleged problem of other minds that is dependent upon that concept requires no solution.

- The discussion centers around the Supreme Court decision of Miller versus California. The language of obscenity legislation is considered in light of the legal history of the issue. It is argued that this language, and the way it is currently viewed by the Court, gives the false impression that obscenity legislation rests on empirical or quasi-empirical assumptions. This false impression totally obscures the basically religious nature of this legislation.
- LONG, Thomas A.** The Problem Of Pain And Contextual Implication. *Phil Phenomenol Res* 26,106-111 S 65.
- It is assumed that pain and pain-behavior are different and that the connection between them is contingent. In what sense can an act rather than a statement be said to imply something? The answer is given that the description of the bodily behavior entails what the behavior is said to imply. Then it is argued that someone's behaving in a certain way in certain circumstances contextually implies his having a private experience, i.e., pain. It is finally suggested that if one has a "real case" then one has criteria of pain, but there are no procedures for deciding which situations are real cases and which are not.

- The author suggests that the work of art and the aesthetic experience are congruent and that an analysis of this congruence reveals both the nature of the import of art and the character of the aesthetic experience. Adopting a faculty framework, she argues that aesthetic experience proceeds through three stages, with the understanding dominating in the first stage, being assimilated to the imagination in the second, and enjoying free play with the imagination in the third. She also characterizes these stages in terms of part-whole relations.
- LORD, Catherine.** Organic Unity Reconsidered. *J Aes Art Crit* 22,263-268 Spr 64.
- Organic unity, defined as a whole composed of internally related parts, is 1) not achievable in the arts and literature, 2) an inappropriate model for most genres, and 3) not desirable. Even Frost's short lyric poem, "Stopping By Woods On a Snowy Evening," exhibits grades of relevance and the structure of the epic corresponds more to the unity of the cosmos as described by Aristotle. If achieved, organic unity would put too heavy a burden on the reader and would preclude the savoring of the individual parts. The author concludes that once freed from the spell of a single model, we will find the different types of unity works of art actually have.

- LOUCH, A R.** Anthropology And Moral Explanation. *Monist* 47,610-624 Sum 63.
- The article sets out to ask about the effect of moral concepts on the way in which we describe and explain social processes and institutions. "Moral" here refers less to moral convictions and more to a way of looking at and describing human action. After discussing the functionalism of Malinowski in the context of examining how the anthropologist comes to understand human behavior, the author concludes that anthropology is a normative discipline in the sense that its inquiries are shaped by concepts like convention and procedures like the tracing of grounds for action. Talk about human institutions and practices is already "a moral cutting of the empirical cake."
- LOUCH, A R.** Scientific Discovery And Legal Change. *Monist* 49,485-503 Jl 65.
- Behavioral scientists, who claim to know the causes of crime, want their scientific know-how applied in the administration of criminal law, so that punishment will be replaced by therapy. But their alleged expertise turns out to be moral appraisal masquerading as scientific truth, giving to their testimony the illegitimate force of fact. Nor is the therapeutic method more humane: it treats the offender as an object to be manipulated according to the interests of others, while imprisonment at least allows the offender a degree of moral autonomy and stresses reform less than the preservation, through penalties, of conditions of fair play in the social game temporarily upset by the infraction. The therapeutic aim would not implement but destroy the procedure of criminal law in a civil society.

- LOVEJOY, Arthur O.** *Reflections On Human Nature.* Baltimore Johns Hopkins Pr 1961.
- This volume attempts "a historical account of the conceptions held of the desires which motivate human behavior, and of the implications of these theories for economics, politics and ethics." The importance of "approbateness" ("the love of praise") in 17th and 18th century theories of human nature is stressed, with reference to authors who regarded it as "the universal, distinctive, and dominant passion of man" and "the indispensable substitute for 'reason and virtue.'" Lovejoy includes some observations of his own on human nature, emphasizing particularly the importance of "man's self-consciousness upon his affective and appetitive life."
- LOVEJOY, Arthur O.** *The Reason, The Understanding, The Time.* Baltimore Johns Hopkins Pr 1961.
- Five lectures explore Jacobi's glorification of *Vernunft* at the expense of *Verstand* in its influence upon Romantic philosophers (especially Schelling) and such men of letters as Coleridge and Emerson. An appendix contains some correspondence with Bergson, in whom Professor Lovejoy finds contemporary restatement of similar emphases upon an immediate knowledge taken as revelatory of the self and of real time.

- LOWE, Victor.** *Understanding Whitehead.* Baltimore Johns Hopkins Pr 1962.
- Part I, after an introductory account of Whitehead's cast of mind and his general philosophy, sets forth his metaphysical system, philosophy of science, and philosophy of religion. Part II is a revision and expansion of "The Development of Whitehead's Philosophy," published in Schilpp's *The Philosophy of Alfred North Whitehead* (1941). In part III the author uses Whitehead, making his own modifications, to discuss the relation between human experience and the metaphysical enterprise. The combination of high appreciation and significant criticism is continued in the concluding chapter, "Learning from Whitehead." The book makes use of conversations with Whitehead and tries to show philosophers and others what his work is all about.
- LOWE, Victor.** "Alfred North Whitehead: Introduction" in *Classic American Philosophers*, Max Fisch (ed), 395-417. NY 1951.
- A summary of Whitehead's work in England is followed by a concise presentation of the major ideas in *Process and Reality*. Although Whitehead's metaphysical work was done in America, his thought is not merely American, but is a broad, and perhaps culminating, unification of the European tradition. Whitehead's metaphysics provides alternative solutions to the traditional problems of Western philosophy.
- LOWE, Victor.** "Lewis' Conception Of Philosophy" in *The Philosophy Of C I Lewis*, Paul A Schilpp (ed), 23-59. La Salle IL Open Court 1968.
- C I Lewis centers his philosophy in the normative and the practical. He explains that his "reflective method" seeks to clarify and express coherently the principles which are implicitly intended in our dealing with the familiar. He has done this admirably for epistemology and theory of value. For metaphysics, the priority he gives to the theory of useful knowledge causes him to doubt that given experience presents any universal conceptualizable features. (Is not causation one?) Lewis also underestimates the new departures to which the ideals of clarifying concepts in use and making them coherent may lead. If the goal which he sometimes acknowledges for metaphysics—comprehensive understanding—is to be pursued effectively, "reflection" needs to be supplemented by speculation. The two are not necessarily enemies.
- LOWE, Victor.** "Peirce And Whitehead As Metaphysicians" in *Studies In The Philosophy Of Charles Sanders Peirce*, E Moore And R Robin (eds), 430-454. Amherst Univ Of Mass Pr 1964.
- The author compares their conceptions of metaphysics and its method. Both men seek relational structures; in other respects they are far apart. Peirce has no place for a single most general discipline, but seeks metaphysical laws founded on those of logic, phenomenology, and mathematics. He attacks metaphysical problems in a piecemeal; for Whitehead there are no detachable problems. Peirce also makes the mistake of keeping religion and "vitally important topics" out of metaphysics. In conclusion, the author adapts Peirce's categories to sketch the idea (which also uses Whitehead) that a metaphysical system requires at least three kinds of entities: qualities, connectors, and synthesizers.
- LOWE, Victor.** "The Concept Of Experience In Whitehead's Metaphysics" in *Alfred North Whitehead*, George L Kline (ed), 124-133. Englewood Cliffs NJ Prentice-Hall 1963.
- The centrality of the concept of experience in Whitehead's metaphysics is usually misunderstood, and has even been denied. One essential in his doctrine that all actual entities are drops of experience is the notion of a unique mode of composition of entities: that in which they participate as components in an experience-event. Whitehead's view that all other types of composition are derivative from experiential togetherness is not easy to dismiss.
- LOWE, Victor.** "The Development Of Whitehead's Philosophy" in *The Philosophy Of Alfred North Whitehead*, Paul A Schilpp (ed). Place Unknown 1941.
- LOWE, Victor.** "William James' Pluralistic Metaphysics Of Experience" in *In Commemoration Of William James: 1842-1942*. NY Columbia Univ Pr 1942.
- What is James' "pluralistic universe" a plurality of? He did not come to grips with this question, and did not need to in order to fight for liberation from monistic idealism; but the question is important. Taking persons as ultimate units would be inconsistent with James' *Psychology*. Perhaps bits of "pure experience" are the units; but perhaps that is the very notion whose bankruptcy he confessed in *A Pluralistic Universe*. Passages in the notebook James kept from 1905 to 1907 suggest that he came close to choosing moments or pulses of experience for his units, as Whitehead later did.
- LOWE, Victor.** A Resurgence Of "Vicious Intellectualism". *J Phil* 48,435-446 Jl 51.
- "Vicious intellectualism," a principle of criticism first introduced by James, is examined and its definition is expanded by the author. This definition is applied to the position of several philosophers who maintain that members of the Communist party should be barred from the academic profession. The author holds that to judge a particular professor's competency to teach, one must examine the individual and not simply an argument from the essence of Communism.

LOWE, Victor and Hartshorne, Charles and Johnson, A. H. *Whitehead And The Modern World; Science, Metaphysics, And Civilization: Three Essays On The Thought Of Alfred North Whitehead*. Boston Beacon Pr 1950.

Whitehead's chief contribution to the philosophy of natural science was his method of "extensive abstraction" for defining ideally exact concepts such as points in terms of relationships perceptually evident. Such definitions are called for if the relational theory of space is taken seriously. The method is explained and defended against some standard criticisms of it. Whitehead's approach to causality and induction is touched on, as another example of his unusual approach to the foundations of natural science. No sharp separation of his philosophy of science from his metaphysics is finally possible.

LOWE, Victor and Hartshorne, Charles and Johnson, A. H. *Whitehead And The Modern World: Science, Metaphysics, And Civilization*. Boston Beacon Pr 1950.

LOWE, Victor. Belief In Unobserved Contemporary Reality: A Realistic Experiential Analysis. *J Phil* 50,541-555 Ag 53.

The (intensional) meaning of my belief that there is a desk in the room next door has been analyzed by C I Lewis into hypothetical predictions—judgments of what sense experiences I would probably get if I should go next door. But judgments of what I would probably be perceiving if I were now next door are also an essential part of my meaning. When I believe in absent reality, this non-predictive part of my meaning comes first to my mind, and must do so. Although the belief is verifiable only as analyzable into hypothetical predictions, all meaning is imaginative, and can take liberties with space and time. The author appeals to Lewis's principle that imagination is sufficient for meaning.

LOWE, Victor. Categorical Analysis, Metaphysics, And C I Lewis. *J Phil* 55,862-870 S 58.

The purpose of categorical analysis is to make explicit the whole of what is implicitly intended in the large concepts we use. On this basis, C I Lewis limited the problem of metaphysics to "the principles of distinction of the real from the unreal," and rejected speculation. But the metaphysical task requires conceptual invention on a large scale, whereby categorical analysis becomes speculative.

LOWE, Victor. Empirical Method In Metaphysics. *J Phil* 44,225-233 Ap 47.

We too readily suppose that we already know what experience is, and what it is to be empirical in metaphysics. The method of the "empirical metaphysics" recommended by Professors Randall and Lamprecht is too narrow. Discovery of the generic traits of existence requires framing metaphysical hypotheses, not just a survey of universes of discourse. And a truly empirical metaphysician, upon recognizing that an experience is a natural event, should not suppose that its nature is already given in conscious sense perception; he should try to conceive its generic constitution (somewhat as Whitehead did), and work from that.

LOWE, Victor. In Defense Of Individualistic Empiricism: A Reply To Messrs Lovejoy And Hook. *J Phil* 49,100-110 F 52.

In judging persons—especially members of the Communist party, who are presently teaching in American universities—we should distinguish between one's principles and one's conduct. Individuals are not merely instances of concepts. They should be judged first of all by their records, rather by that of any group to which they belong.

LOWE, Victor. Influence Of Bergson, James And Alexander On Whitehead. *J Hist Ideas* 10,267-296 Ap 49.

Bergson's philosophy is often said to have been a major influence on Whitehead. Northrop, writing about Whitehead's work in England on the philosophy of science, claimed that this influence can hardly be exaggerated. But considerations of the problems Whitehead handled and the essentials of his solutions deflates this claim. A similar consideration of Whitehead's metaphysics shows that there are enormous differences from Bergson's. Similarities between James' philosophy and Whitehead's are evidences of sympathy rather than influence. Alexander's *Space, Time and Deity* had some influence on Whitehead, but not an indispensable one.

LOWE, Victor. Montague's Vision Of Philosophy. *Rev Metaph* 6,397-424 Mr 53.

Montague holds that the proper philosophical objective is knowledge of the possible, rather than the actual. Although this definition of the objective of philosophy and his concept of subsistent possibilities lead to difficulties in the relationship of the speculative vision to science, Montague's emphasis on the imaginative character of philosophizing is a corrective to our literal and linguistic habit of thought.

LOWE, Victor. Professor Goodman's Concept Of An Individual. *Phil Rev* 62,117-126 Ja 53.

Goodman's nominalistic definitions of the "individual" as what "overlaps something" and as a "segment of the world of sense experience" fail to give an adequate meaning to the discreteness of qualia, fail to recognize the actual contrast between individual and universal elements in experience, and can only define the difference between an individual and a class relatively, in terms of the discourse in which they occur. The only clear meaning of "individual" seems to be: an entity which, if a theory of logical types were adopted, would be of the lowest type.

LOWE, Victor. The Philosophy Of Whitehead. *Antioch Rev* 8,223-239 Je 48.

This article is a general exposition of Whitehead's thought with some biographical remarks. From his insight that every fact is a process of self-realization, growing out of the past universe while also adding its individual value to the universe, Whitehead developed a metaphysics which addresses the major problems of philosophy—the relationship of the human and the natural worlds, the nature of experience, individuality and interdependence, and the relation of the eternal to the temporal. Whitehead's thought is rich in insights on the problems of education and society.

LOWE, Victor. William James And Whitehead's Doctrine Of Prehensions. *J Phil* 38,113-125 F 41.

The understanding of Whitehead's unusual empiricism is what would profit most from a joint study of James and Whitehead. In his *Psychology* James described the moment of experience ("the passing thought") as inheriting and appropriating the

contents of prior experiences. His superb introspection provides the strongest evidence that Whitehead's theory of (physical) prehensions is not a castle in the air. Attention is also called to James's own explanation of "radical" in his *Radical Empiricism*: it means holding fast to "the plain conjunctive experience" of "felt transition." Recognizing the immanence of the past in the present pulse of experience does not undermine realism. W M Urban's dubious claim that Whitehead's conception of this pulse as both subject and superject is unintelligible applies equally to James.

LOWRY, Howard. *The Mind's Adventure: Religion And Higher Education*. Philadelphia Westminster Pr 1950.

The first part of the book analyzes our contemporary situation and examines some of the ideas and influences that have brought us where we are and considers the bearing of all this on colleges and universities. The second chapter offers reasons why religion, that had brought forth most higher education in this country, yielded its place very widely to the secular spirit. Chapter three treats of the relations of religion and education. The next chapter on the Church college continues this same discussion, by an analysis of those colleges, whose influence in American life is out of all proportion to their size, that have the task of trying to be true to their religious purpose and at the same time be genuine places of higher learning and free inquiry. A final chapter looks forward to the part education may or may not have in achieving our democratic goals.

LUCAS JR, George R (ed). *Triage In Medicine And Society: Inquiries Into Medical Ethics*. Houston Inst Of Religion 1975.

This book contains essays and discussions which treat the definition and history of "triage" as a model for the allocation of scarce medical resources from the period of the Napoleonic Wars to the present. Ethical evaluations of various triage situations are presented. The possibility of extrapolating the triage concept from its medical setting as a paradigm for social situations involving critical shortages of essential commodities is discussed.

LUCAS, Edward D. *The Logic And Reason In Christianity, A Brief By A Lawyer*. NY Revell 1945.

LUCAS, J R. The One Concept Of Probability. *Phil Phenomenol Res* 26,180-201 D 65.

The Concept of Probability arises from our interpolating a continuous range of truth values between the extreme values of truth and falsehood. Two fundamental rules of the calculus of probabilities are derived from the twin requirements that probabilities are numerical magnitudes, subject to the ordinary algebra of real numbers, and that they are assigned to propositions, which are subject to a Boolean algebra. Objections to the simple-minded application of Bernoulli's theorem are considered and countered, and interpretation rules given.

LUCE, Arthur Aston. *The Dialectic Of Immaterialism*. Mystic CT Verry 1965.

LUCE, David Randall. Mind-Body Identity And Psycho-Physical Correlation. *Phil Stud* 17,1-6 1966.

Although the contemporary "identity" theory of the mind-body relation purports to rest on the empirical thesis of psycho-physical correlation (granting that psycho-physical correlation is a necessary condition only, and not a sufficient condition, of mind-body identity), it appears that the two theses are in fact independent. The author develops a notation for speaking of mental events, physical events, and relations between events, and shows that precise formulations of the two theses lead to interesting questions.

LUCE, David Randall. On The Logic Of Belief. *Phil Phenomenol Res* 25,259-260 D 64.

It is noted that Roderick Chisholm's logic of belief holds up only if we deny each of two plausible assumptions: (1) that everyone believes that something or other exists, and (2) that if someone believes anything at all, then there is at least one thing about

which he believes something or other. In view of the plausibility of the assumptions, it is suggested that Chisholm's logic of belief is perhaps overly general.

LUCE, David R. *The Action Of Mind On Body.* *Phil Sci* 27,171-182 Ap 60.

In this article terminology and symbolism are introduced, which facilitate the precise statement of propositions concerning the action of mind on body. The minimal meaning of "the action of mind on body" is contrasted with some of the more radical interactionistic positions to be found in the literature. These more radical positions are defined in precise formulations. It is noted that radical interactionism, or "exceptionalism" as it is here called, is a contingent, empirically-decidable issue which is quite independent of metaphysical views regarding "mind" and "matter." For that very reason it should not be the object of special philosophic concern.

LUCE, R Duncan and Raiffa, Howard. *Games And Decisions: Introduction And Critical Survey.* NY Wiley 1957.

This book emphasizes the central ideas and results of game and decision theory "unencumbered by their technical mathematical details," and omits most proofs and solutions of specific games, but does make use of considerable abstract notation and mathematical language. It surveys most of the diverse results in the field, with special attention throughout to "the major intuitive and empirical objections" to the application of these theories to problems in the social science field. The first twelve chapters deal with two-person and many-person game theory, chapter thirteen takes up decision making when outcomes are uncertain rather than merely risky, and the last chapter treats of group decision making.

LUIJPEN, Wilhelmus Antonius Maria and Koren, H J. *Religion And Atheism.* Pittsburgh Duquesne Univ Pr 1971.

LUIJPEN, Wilhelmus Antonius. *Theology As Anthropology; Philosophical Reflections On Religion.* NY Humanities Pr 1973.

In this work, *Theology As Anthropology*, the author gives his reader an up-to-date survey of linguistic philosophy (Analytical Philosophy) as it has discussed the problem of the meaningfulness of religious statements. In brief and tightly-argued chapters, Luijpen leads the reader to the work of A J Ayer, Anthony Flew, R M Hare, J N Findlay, J L Austin, Donald D Evans, as well as Martin Heidegger, Carl Jung, Ludwig Feuerbach, Ludwig Wittgenstein, and many others, to show how their thought has influenced the possibility of speaking intelligibly and meaningfully in a religious manner. The author's own point of view is expressed later in the book in Chapter 3, in which he argues that when one speaks about God, one does so in a particular way, and that he does not mean God as a objective being, but God as He is related to one's own existence.

LUIJPEN, William A. *Existential Phenomenology.* Pittsburgh Duquesne Univ Pr 1960.

In an effort to rethink the perennial problems of philosophy in the atmosphere of Husserl, Heidegger, Marcel, Sartre, and Merleau-Ponty, the author ignores the debates about the historical and methodological opposition between existentialists and phenomenologists. The problems he selects are: (1) man's metaphysical question about why there is something and man's relation to transcendent and absolute being; (2) man's relation to reality and his ability to know what is true for others also; (3) the relationship of love to others that creates a community in which claims to justice motivate an adoptable legal order; and (4) whether man's freedom, his unique value, is sacrificed by belief in the existence of God.

LUIJPEN, William A. *Phenomenology And Atheism.* Pittsburgh Duquesne Univ Pr 1965.

A thoroughgoing study of phenomenology from Kant's *Critique of Pure Reason* to Merleau-Ponty and Sartre, this book deserves the attention of existentialists, marxists, and phenomenologists. The author has studied at the Angelicum, the Sorbonne, Louvain, and Freiburg. Luijpen concludes that "it is all to the good that... atheism is no longer the sociological impossibility... it was formerly." No flighty treatise, thirty pages are devoted to Kant, thirty to Galileo, Comte, and their successors, forty-five to Feuerbach and Marx, sixty to phenomenology, and eighty-two to existentialism. Sierksma's religious projection theory, little known among Anglo-Americans at any rate, is given a considerate treatment and is of curiosity because it is an attempt to do in religion what Freud did in psychology. Marx comes off quite well as he is beginning to do in the most unexpected circles. The past five years have seen him finally receiving the universal recognition that places him alongside Aristotle, Augustine, Newton and Kant.

LUIJPEN, William A. *Phenomenology And Humanism.* Pittsburgh Duquesne Univ Pr 1966.

As its subtitle indicates, this essay is intended as a *Primer in Existential Phenomenology*. There are six chapters; (1) Phenomenological Reduction and the Lived World; (2) Consciousness as Intentionality; (3) Man as Existence; (4) The Primitive Fact of Existential Phenomenology; (5) Themes of Existential Phenomenology; (6) Phenomenology and Theology. Luijpen says that Husserl did not succeed completely in ridding his thought of "the very *Cogito* myths which he fought so hard to dispel." He rejects as "pure nonsense" Sartre's descriptions of the world-in-itself and holds that "Jaspers and Marcel did not undergo the influence of phenomenology...." He justifies his title by remarking (in the conclusion) that "yes-to-God" man can find his way to himself as integral man. An integral phenomenology recognizes this aspect and we call it therefore a humanism."

LUNDHOLM, Helge. *The Aesthetic Sentiment: A Criticism And An Original Excursion.* Cambridge MA Sci-Art 1941.

This volume, "a criticism and an original excursion," attempts to identify the aesthetic sentiment. Admitting S Alexander's aesthetic to be the work of a genius, the author takes issue with Alexander for making appreciation only "a pale shadow" of creation, and for failing to see that they are different in kind. Lundholm finds that, whereas the aesthetic sentiment is present in both appreciation and creation, the latter is prompted also by the "constructive impulse," which is locomotive and aims at the making of a permanent object. The author's discussion of the "logic of beauty" is highly suggestive, but unfortunately not adequately developed. One questions whether his conative psychology permits aesthetic unity in anything but name.

LUNGER, Harold L. *Political Ethics Of Alexander Campbell.* St Louis Bethany Pr 1954.

LUNN, Arnold Henry Moore. *The Revolt Against Reason.* NY Sheed & Ward 1951.

The writer of this volume asserts that the greatest debate of modern times is that between the Rationalists, who refer, for the support of their creed, to reason, and the Fideists, whose philosophy is grounded upon intuition and who offer no reasoned defense for their basic doctrines. He attempts to show how the Catholic Church inherited and has preserved in her tradition the rationalism of the Greeks, whereas Martin Luther, in his doctrine of justification by faith, laid the foundations of the modern revolt against reason. He attempts to demonstrate what Christian rationalism is, and what its role must be in sustaining civilization.

- The author considers the problem of objectivity faced by historians and elaborates on the following procedures to increase historical objectivity: (1) Historians must recognize their point of view and its effects on their work. (2) A full account must be taken of human beings in interactions with their environment. (3) Care and consideration must be taken in the use of analogy and metaphor. (4) The development of a more complex theory of causation must be forthcoming.
- LYNDON, Roger C.** *Notes On Logic*. Princeton Van Nostrand 1966.
- This book presents notes for a sophisticated course in mathematical logic. It appears to be designed as a supplementary book rather than a text, although exercises are included. The treatment is abstract, and reference is frequently made to mathematical theories. The book covers both propositional and predicate logic; this material is presented in terms of a language subject to various interpretations rather than as a system containing free variables of different categories. Included in the book are the Herbrand-Gentzen Theorem, Gödel's Incompleteness Theorem, and Church's Theorem on the undecidability of predicate logic.

- LYONS, Daniel.** Unobvious Excuses In The Criminal Law. *Wayne Law Review* 19 Mr 73.
- The criminal courts cannot in practice take account of some unobvious excuses like socially-induced greed. The implications of this point are explored for Hart's rationale for legal excuses. The paper considers Herbert Morris' preference for punishment-systems over certain therapy-systems. Lyons worries that many offenders, fearing shame more than guilt, might be reluctant to use legitimate excuses of subtle internal weakness.
- LYONS, David Barry.** Baier's Test For Practical Rules Re-Examined. *Phil Stud* 14,18-21 1963.
- Kurt Baier wrote an article which was widely criticized because it contained the fallacious sentence "Premises of an argument are true if the argument is valid and the conclusion is true." The author defends Baier's article pointing out that this sentence does not properly characterize Baier's actual procedure for testing practical rules. He argues that if one omits the notion of "truth" as expressed in the sentence above, he might easily see that for Baier rules are to be regarded as validated if it is found that they, more than their alternatives, guide us toward the best courses of action.

- MAC CORMAC, Earl R.** *Metaphor And Myth In Science And Religion*. Durham NC Duke Univ Pr 1976.
- An investigation of the use of metaphor by scientists and theologians. Scientific language employs metaphor in a manner similar to the religious uses of metaphor, so that to object to religion because it is nonliteral language fails to meet a philosophical criterion meaning such as falsifiability, without also faulting science for the same reason, is hypocritical and uses a double standard, one standard for science, another for religion. A tensive theory of metaphor is constructed that will account not only for scientific and religious uses, but also for literary and philosophical uses. The study of metaphor extends into a concurrent theory of myth with the latter defined as the false attribution of reality to a suggestive metaphor. Scientists as well as theologians have formulated myth.
- MAC CUNN, John.** *The Political Philosophy Of Burke*. NY Russell & Russell 1965.
- MAC DONALD, Audrey L.** Peirce's Logic: An Objective Study Of Reasoning. *Monist* 48,332-345 JI 64.
- Peirce developed several theories of logic known as the doctrine of signs, the logic of relations, and the Existential Graphs. Taken together, these logical theories form a single theory of logic as an objective study of reasoning. Reasoning is the cognitive process shorn of personal, subjective factors. Thus, reasoning is the same for all minds. In his theory of logic Peirce attempts to present the whole process of reasoning in symbolic language using not only the usual letters and logical signs but also diagrams. The diagrams, called Existential Graphs, are elaborate developments of Euler's diagrams. The Graphs particularly interested Peirce because they expressed the actual dynamics of reasoning rather than the mere results of that process. Clearly, Peirce believed logic's function is to present the mind's actual reasoning process so that errors and awkward modes of reasoning could be eradicated and/or improved.

- MAC GREGOR, Geddes.** *God Beyond Doubt: An Essay In The Philosophy Of Religion*. Philadelphia Lippincott 1966.
- A defense of mystical experience in the face of the skeptical attacks of contemporary philosophers. MacGregor suggests that off one edge of ordinary consciousness is the unconscious of psychoanalysis, and off the opposite edge is mystical experience. Just as one gets to one's unconscious only under special conditions, so one gets to mystical experience only under special conditions—the conditions of intense doubt and despair or what MacGregor calls the "Skeptical Edge."
- MAC GREGOR, Geddes.** *Introduction To Religious Philosophy*. Boston Houghton Mifflin 1959.
- Designed as an introductory text for college and university undergraduates, this book range widely but briefly through such topics as the nature of religion, various conceptions of God, the traditional arguments for the existence of God, man's knowledge of God, man's destiny, the problems of good and of evil, and the nature of religious language. There is an appealing autobiographical epilogue, a bibliography useful for the student, and an index.
- MAC GREGOR, Geddes.** *Philosophical Issues In Religious Thought*. Boston Houghton Mifflin 1973.
- The first of the two parts, aimed at orienting students on the range of philosophical problems about religion, displays representative views on such aspects of religious talk, thinking, and experience as paradox, mystery, mysticism, and symbolism; evidence, relevance, doubt, faith, and existential anguish; divinity and nature, divinity and evil, divinity and man; and the possibility of continued personality after death. The second part, constructive and original, makes such points as that logic in religious philosophy, like a housepainter's ladder, is indispensable but sometimes gets in the way; that God, like radium, "could never be discovered by logic"; that openness is a condition of discovery; and that openness to reverence for and love of the transcendent may be necessary for religious discovery.

MAC INTYRE, Alasdair. *A Short History Of Ethics*. NY Macmillan 1966.

MAC INTYRE, Alasdair. *Herbert Marcuse: An Exposition And A Polemic*, Frank Kermode (ed). NY Viking Pr 1970.

This book is an exposition with critical comments of Herbert Marcuse's social and political philosophy. The author shows, in the first chapters of the text, how Marcuse has modified and incorporated Freudian, Hegelian and Marxian doctrines into his philosophy. The last sections of the book are devoted to a discussion of Marcuse's analysis of Soviet Marxism and of the one-dimensional Western industrial society.

MAC INTYRE, Alasdair. Imperatives, Reasons For Action, And Morals. *J Phil* 62,513-523 O 65.

The author notes that the thesis that moral utterances are imperative or resemble imperatives is interesting because (1) it may throw light on the nature of moral utterances but also (2) the project of explaining moral concepts with the aid of a grammatical category—the imperative—could have consequences for our understanding of the possible relation between the study of language and philosophy. The paper is skeptical in intention and so does not present different versions of the thesis. It does examine the nature of the imperative mood to see if any kind of utterance is necessarily expressed by means of it, and then the relation between imperatives and reasons for action—to understand the possible role of imperatives in practical discourse. At the end questions pertaining to moral discourse are raised.

MAC IVER, R M (ed). *Great Moral Dilemmas In Literature, Past And Present*. NY 1956.

Each of this book's thirteen chapters consists of an analysis and comments by a contemporary author regarding a work of literature which poses an ethical issue: *The Book of Job*, *Antigone*, *The Bacchae*, *Crito*, *Hamlet*, *Faust*, *The Ring* and *The Book*, *Billy Budd*, *The Wild Duck*, *Ethan Frome*, *Major Barbara*, *Death in Venice*, and *The Caine Mutiny*. Among the authors are the philosophers Charles Frankel, Richard McKeon, and John E Smith.

MAC IVER, R M (ed) and Bryson, Lyman (ed) and Finkelstein, Louis (ed). *Goals For American Education*. NY Harper 1950.

MAC IVER, R M. *Social Causation*. Boston Ginn 1942.

This work consists of four parts. The first part treats of science and causality in which the modes of the question *Why* are thoroughly gone into. The second part deals with causation and the social sciences, in which the author goes into a very fascinating account of the plight of the social sciences and what can be done about this predicament. Part three is devoted to the analytic approach with emphasis on the quest of the specific *Why*.

MAC IVER, R M. *The Challenge Of The Passing Years, My Encounter With Time*. NY Simon & Schuster 1962.

This book considers the problems of man as affected by the nature of time. The underlying assumption is that time is not "a force that moves everything relentlessly on" but a dimension which attaches to events. Three "eternally valid" facts about time, the author finds, are its irreversibility, its lack of halts, and its march towards finality. It is these features of time that give life its poignancy and also its opportunities. To find deliverance or release from concern over the brevity and transience of life, the author argues, man must commit himself to a mode of life "so fulfilling to the personality or offering such promise of future fulfillment that the time is thereby 'redeemed'."

MAC KAY, Alfred F (ed) and Merrill, Daniel D (ed). *Issues In The Philosophy Of Language: Proceedings Of The 1972 Oberlin Colloquium In Philosophy*. New Haven Yale Univ Pr 1976.

The paper's general topic was on the philosophy of language with the papers divided into three areas: the relation between formal logic and the logic of natural languages; theories of belief and reference with respect to possible world semantics; and the nature of speech acts and their expression.

MAC KINNON, Donald W. Personality And The Realization Of Creative Potential. *Humanitas* 1,273-288 Wint 66.

MAC KINNON, Edward M. *Truth And Expression*. NY Newman Pr 1971.

The author's specialization, philosophy of science, is most apparent in Chapter III where valuable insights are offered—probably graspable only by those with a strong

background in both physics and philosophy. Chapter IV is far less technical and suggests some interesting correlations of truth as it functions in science and in theology. Chapter I, "Truth as Problematic," reviews the history of the epistemological problem as it appears in science and theology. Chapter II, "The Meaning of Truth," evaluates differed theories of truth and opts for a qualified coherence theory which depends on a partial synthesis of Lonergan's theory of judgment, of Quine and Sellars's pragmatic theory of acceptance, and of Dewey's stress on the role of inquiry.

MACHAMER, Peter K (ed) and Turnbull, Robert G (ed). *Motion And Time, Space And Matter: The Interrelations In The History Of Philosophy And Science*. Columbus Ohio State Univ Pr 1976.

This book contains 18 papers by both historians of philosophy and historians of science.

MACHAN, Tibor R. *Human Rights And Human Liberties: A Radical Reconsideration Of The American Political Tradition*. Chicago Nelson-hall 1975.

The book begins with a sketch of the history of the idea of human rights, showing the idea's demise at the hands of empiricism and defending it from non-naturalists and anti-absolutists. A revised conception of it is advanced and human rights are tied to ethical egoism or individualism. This ethics is then defended. Human rights are shown as the necessary conditions in society for individuals to aspire to moral excellence (i.e., required for human dignity). The political organizational consequences are then developed. Various results for current political reality are shown to be implied. Then critics are confronted, metatheory is clarified.

MACHAN, Tibor R. *The Pseudo-Science Of B F Skinner*. New Rochelle NY Arlington House 1974.

Skinner's claim to have produced a scientific analysis of human behavior and society is scrutinized and found unsupported. Skinner's self-identified value-relativism is used to understand Skinner's own value judgments as approvals of certain social developments. A conception of human nature combining freedom of choice and moral responsibility is shown to be fully compatible with both science as such and certain recent developments in psychophysics and psychology. A political ideal drastically different from and less utopian than Skinner's is then sketched on the basis of this conception of human nature and morality.

MACHAN, Tibor R. "Freedom And Capitalism" in *Outside Looking In*, D James (ed). NY Harper & Row 1972.

This essay defends the ethical foundations of the free society and its economic system, capitalism, and it answers critics who claim that true freedom is not protected and preserved where economic inequality exists.

MACHAN, Tibor R. "Reason, Morality, And The Free Society" in *Essays On F A Hayek*, R L Cunningham (ed). Indianapolis Liberty Pr 1977.

Hayek's argument for the spontaneous order is scrutinized and it is shown that certain self-referential problems emerge that undercut Hayek's evolutionism. The conception of reason Hayek employs to criticize centralized planning is rejected in favor of an older conception that is fully supportive of a free social order wherein individuals use their reason and communities are rational by virtue of the reign of such reason.

MACHAN, Tibor R. Some Considerations Of The Common Good. *Journal Of Human Relations* 979-994 1970.

The essay presents a critical survey of varieties of conceptions of the public interest or common good (in its political sense) and it is argued that given human nature and the justification of political institutions the public interest or common good must be the protection and preservation of political/economic liberty. The moral character of human life requires that unless evil consists in threatening or abridging another's liberty, its choice by someone may not be forcibly prevented. This leads to the only possible public or common good, the equal liberty of all.

MACHLE, Edward J. "Human Nature" And Ethics. *Univ Of Colorado Studies* 17-25 F 58.

This article essays to show that "human nature" as it functions in statements that human nature is good, used to establish ethical positions, differs from the same phrase as a purely descriptive term, which cannot undergird ethics without committal of the naturalistic fallacy. The moral use functions only within a community with a sense of vocation, and is never merely third-person in syntax. Referring to Calvin, Hobbes, Ayer and Bertram Morris, the argument continues by giving an analysis of the sort of coming-to-agreement necessary for the institution of moral relations, and concludes that "human nature is good" is a constructive, non-empty tautology.

MACHLE, Edward J. Hinayana And Religious Paradox. *Review Of Religion* 17,23-28 N 52.

After a review of Robert Slater's *Paradox and Nirvana*, that author's concept of "ultimate religious terms" is criticized. It is questioned whether the involvement of religious notions in art, ritual and myth does not preclude singling out this or that "term" as "ultimate." Examples from Buddhism, Christianity and Hinduism lead to the claim that religious "terms" and "paradoxes" cannot be separated from the myths in which they are anchored.

MACHLE, Edward J. Symbols In Religion. *Journal Of Bible And Religion* 21,163-169 JI 53.

Those aspects of religious symbols which cannot be treated by methods appropriate to discursive language or to art are singled out, and their differentiae from science and art developed. Such symbols are then discussed as ritual, myth and paradox.

MACINTOSH, D C. *The Problem Of Religious Knowledge*. NY Harper 1940.

Perhaps the most significant feature of the volume is the illumination it affords through a masterful and comprehensive system of classification. The author is out to show the weakness of the religious thought of a list of major prophets both as philosophy and as practical religion. The Achilles' heel of all such philosophies and theologies is the doubt and denial of genuine and personally appropriated knowledge of the divine. One must say of the author that he always works consistently and comprehensively and on that score has achieved his hoped for (if not acclaimed) *Novum Organum* for theology.

MACINTYRE, Alasdair C. *A Short History Of Ethics*. NY Macmillan 1966.

MACINTYRE, Alisdair. Pleasure As A Reason For Action. *Monist* 49,215-233 Ap 65. By discriminating different concepts of pleasure and enjoyment the paper attempts to clarify the role of the senses and of sensations in pleasure, and to make clear in what different senses pleasure can be a reason for action. It discusses two classical treatments of pleasure—the Benthamite and the Aristotelian—stressing the former over the latter, in contrast to the more prevalent leaning in recent philosophical writings about pleasure. It concludes by affirming the remark it had initially questioned, that "it is always silly to ask a man why he wants pleasure."

MACKAY, Alfred F (ed) and Grimm, Robert H (ed). *Society: Revolution And Reform*. Cleveland OH 1971.

The volume includes four symposia each consisting of a principle paper and commentary. In Symposium I, "Moral Progress," Jerome Schneewind argues that moral progress may take place either through gradual reform procedures or abruptly through revolution. In Symposium II, Arnold S Kaufman argues that no special feature of democracy exempts it as a government form from the legitimate use of violence. In Symposium III, Ronald M Dworkin outlines a new theory of law dependent on moral imperatives. In Symposium IV, David Braybrooke discusses "Revolution Intelligible or Unintelligible."

MACKEY, Louis. *Kierkegaard: A Kind Of Poet*. Philadelphia Univ Of Penn Pr 1971.

To L Mackey, Kierkegaard is a poet, and the poetic form of his works is essential to their message. Thus the study of Kierkegaard as a poet is central, not peripheral, to the understanding of his authorship. He examines Kierkegaard's use of the poetic tools of pseudonymity, imagery, irony, and humor to establish the poetic distance of author, work, and reader required by his purpose of engaging the reader to make the choice of self. Finally, he argues that in writing philosophical poetry, Kierkegaard is protesting the systematism and narrow intellectualism of modern philosophy, and trying to reestablish philosophy as the concern of the whole person for his concrete life—which for Kierkegaard himself means his life in the sight of God.

MACKEY, Louis. Kierkegaard And The Problem Of Existential Philosophy, I. *Rev Metaph* 9,404-419 Mr 56.

MACKEY, Louis. Kierkegaard And The Problem Of Existential Philosophy, II. *Rev Metaph* 9,569-588 Je 56.

MACKEY, Louis. The Loss Of The World In Kierkegaard's Ethics. *Rev Metaph* 15,602-620 Je 62.

The author argues that the problem of acosmism is posed by two Kierkegaardian propositions central to the *Concluding Unscientific Postscript*: first, that the ethical reality of the subject is the only reality, and second, that the subject encounters all other "realities" only in the mode of possibility, by thinking them. Though by tendency a classical realist, Kierkegaard effectively disavowed metaphysical problems as ethically irrelevant and stressed the isolation of individuals. The author contends that the effect of his position is to infinitize freedom and absolutize human subjectivity. However, Kierkegaard remains the poet of inwardness whose intent is not philosophical but rhetorical.

MACKIE, J L. Causes And Conditions. *Amer Phil Quart* 2,245-264 O 65.

A formal analysis of both singular and general causal statements is given, which relates them to incompletely known universal laws of the "regularity" type. It is shown that this analysis overcomes many well-known difficulties for a regularity view (for example, it resolves problems about the "covering-law model" for causal statements and explanations in history) and also that it fits in exactly with our basic methods of discovering causal relationships, as formalized in an improved account of the Method of Difference. It is indicated how this analysis of causal statements can be extended to cover those that are based on functional dependence rather than necessity and sufficiency, and how this extended analysis fits in with the discovery of causal relationships by the Method of Concomitant Variation.

MACKIE, J L. Conditionally-restricted Operations. *Natre Dame J Form Log* 2,236-243 1961.

MACKIE, J L. The Direction Of Causation. *Phil Rev* 75,441-466 O 66.

We seem to recognize a relation of causal priority, distinct from temporal priority, which constitutes the difference between *causing* and *being the effect of*; the problem is to give an account of this relation. Several possible analyses of causal priority are considered and rejected. Light is thrown on this relation by an imaginary precognition experiment which, if successful, would give evidence for time-reversed causation. This leads to an account of causal priority in terms of the contrast between fixity (as seen in what is past or present) and nonfixity (as seen in future contingents). An account is also given of priority with respect to the dispersal of order. It is

- concluded that this last, causal priority as analyzable in terms of fixity, and temporal priority are all distinct: it is a contingent fact that they seem always to coincide.
- MACKLEM, Michael.** *The Anatomy Of The World: Relations Between Natural And Moral Law From Donne To Pope.* Minneapolis Univ Of Minn Pr 1958.
This book is a study of the underlying ideas animating the development of the numerous cosmologies and theories of natural and moral law from Donne to Pope. Macklem traces the displacement of the pessimism and post-lapsarianism, respectively, of Donne's *Anatomie of the World* and Burnet's *Sacred Theory of the Earth* by the rationalism of Newton's *Principia* and the optimism of Pope's *Essay on Man*.

- MACMURRAY, John.** *The Self As Agent*, Vol 1. NY Harper 1957.
This volume, tries a new way of approach by adopting as the main philosophical concept the form of the personal, instead of that of the mechanical or the organic and by transferring the centre of gravity from thought to action. It contends that the subjected of the self as thinker is merely a derivative and negative aspects of the self as agent. An attempt is made to support this view by criticism of Descartes and Kant.

- MACQUARRIE, John.** *Twentieth Century Religious Thought: The Frontiers Of Philosophy And Theology, 1900–1960.* NY Harper & Row 1963.
This volume attempts to evaluate the 20th Century from the point of view of the philosophy of religion. MacQuarrie covers the field, touching on Idealism, Positivism, Naturalism, Pragmatism, Realism, Thomism, Logical Empiricism and Existentialism, as well as Philosophies of Spirit, Value Philosophies (mostly post-Kantian), Philosophy of History and Culture, Cultural and Sociological approaches to Religion, Being Philosophies, Phenomenology, Science and Religion, Theologies of the Word, Post-Liberal Theology, etc.... The book is a mingling together of philosophical analysis with sociological, historical, and cultural appreciations of religion. An extensive bibliography is included.
- MACRAE, Valerie** and Routley, Richard. On The Identity Of Sensations And Physiological Occurrences. *Amer Phil Quart* 3,87–110 Ap 66.
Many objections to the hypothesis that sensations are physiological occurrences are based upon a theory of identity which would exclude a contingent identity holding between sensations as reported in ordinary language and sensations as described in scientific discourse. The main task of this paper is to sketch a theory of identity adequate to cope with the truth of such identities and their peculiar features. Two conditions must be satisfied by true theoretical identities. First, items identified should share all *extensional* properties which are *such that they are significant of both*. These items do not have to be of the same logical type or category. Second, it is required that a theory about one of the items of a theoretical identity should *explain* features of the other item. Because the identity hypothesis, thus interpreted, is empirically equivalent to and compatible with various apparently rival hypotheses, such as the double aspect and causal theories, a synthesis of these hypotheses is affected.
- MACY, Joanna Rogers.** Perfection Of Wisdom: Mother Of All Buddhas. *Anima* 3,74–80 Fall 76.
The concept and image of wisdom (*Prajñāpāramitā*), which emerges in early Mahāyāna Buddhism reveals important distinctions from the Theravadin view of wisdom. These differences are explored—in terms of the role of intuition, the view of causality, and the relation of mind to matter. The connection between the insight of *Prajñāpāramitā* (Perfection of Wisdom) and the development in India of the mathematical concept of zero is pointed out, as well as the feminine imagery which is employed throughout.
- MADDALONI, Arnold.** Two Liberalisms: A Study In Contrasts. *Éduc Theor* 2,177–185 JI 52.
- MADDEN, Arthur G** and Weigel, Gustave. *Knowledge: Its Values And Limits.* Englewood Cliffs NJ Prentice-Hall 1961.
This book contains a concise statement of a Theory of Knowledge in which the ways of knowing are described and an evaluation made as what extent it enables us to grasp the real. This is followed by a treatment of the kinds of certitude and a critique of science and philosophy.
- MADDEN, Arthur G** and Weigel, Gustave. *Religion And The Knowledge Of God.* Englewood Cliffs NJ Prentice-Hall 1961.
This work begins with a description of the religious phenomenon. It then deals with an epistemology of religion, i.e., the problem of our knowledge of God. Following this is an analysis and critique of the metaphysical arguments for the existence of God and a final view on the limits of a natural theology.
- MADDEN, E H** and Blake, R M and Ducasse, C J. *Theories Of Scientific Method: The Renaissance Through The Nineteenth Century,*) H Madden (ed). Seattle WA Univ Of Wash Pr 1960.

- MADDEN, Edward H (ed).** *The Structure Of Scientific Thought.* Boston Houghton Mifflin 1960.
- MADDEN, Edward H (ed)** and Handy, Rollo (ed) and Farber, Marvin (ed). *Philosophical Perspectives On Punishment.* Springfield IL Thomas 1968.
The book consists of a symposium on philosophical perspectives on punishment. The four major papers were delivered by three philosophers (Charles A Baylis, Brand Blanshard, C J Ducasse) and one legal scholar (Mitchell Franklin), and eight commentaries on those papers were given by philosophers, legal scholars, and behavioral scientists. In general the participants defended a teleological view of punishment and rejected the retributivist and deontological views, although the latter position was not wholly without support.
- MADDEN, Edward H.** *Chauncey Wright And The Foundations Of Pragmatism.* Seattle Univ Of Wash Pr 1963.
Professor Madden presents the first detailed study of an important philosopher in nineteenth-century American thought. He examines Wright's intellectual development and writings. He focusses on: Wright's views concerning metaphysics, religion, ethics and science; the impact of Wright on Pierce, James, Holmes and other pragmatists; and Wright's anticipation of much of twentieth-century naturalistic and positivistic thought.
- MADDEN, Edward H.** *Civil Disobedience And Moral Law In Nineteenth-Century American Philosophy.* Seattle Univ Of Wash Pr 1968.
The first theme is the conflict of intuitionistic and utilitarian interpretations of moral law; the second is the conflict between differing attitudes toward reform in general and abolitionism in particular. The series of narratives opens with the familiar but significant account of Francis Wayland's conversion to civil disobedience, moves to a comprehensive and clear sketch of the Oberlin reform movement, briefly summarizes the abolitionist thinking centering around Emerson and Thoreau, examines the argument for accepting the necessity of organized social reform defended by Theodore Parker and George William Curtis, expresses clearly the importance of Chauncey Wright's synthesis of Darwinism and utilitarianism, and closes with an insightful account of Charles Eliot Norton.
- MADDEN, Edward H** and Hare, Peter H. *Evil And The Concept Of God.* Springfield IL Thomas 1968.
The authors deal critically with the problem of evil which has affected many philosophers and theologians through the ages. The book gives a detailed criticism of all theistic and quasi-theistic attempts to make sense of the facts of evil, and rejects all of them. Two full chapters are devoted to a critical examination of the theodicies of St Augustine, Descartes, Leibniz, and other contemporary writers. Lastly, the authors reject the strategy of those who modify the concepts of theism in the direction of "a temporal and/or pantheistic concept of God."

- MADDEN, Edward H.** E G Boring's Philosophy Of Science. *Phil Sci* 32,194–201 Ap 65.
- MADDEN, Edward Henry.** *Philosophical Problems Of Psychology.* NY Odyssey Pr 1962.
The first half of this book defends the "analytic" interpretation of psychological science, and refutes "a priori" type arguments which would impose or eliminate certain theories in advance of science's proper estimate of their empirical usefulness. The criticism is almost always directed against the gestalt school, for both its general conceptions of science and its particular theories. The second half, after refuting some rather unimpressive philosophical attacks upon psychoanalysis, goes on to state the latter's relevance for the philosophical problem of responsibility.

- MADDEN, Edward H.** The Many Faces Of Evil. *Phil Phenomenol Res* 24,481-492 Je 64.
- The philosophical problem of evil is a puzzle for the theist. If God is all powerful and all good why is there so much *prima facie* gratuitous moral and physical evil in the world? The theist offers numerous solutions to the problem, but, after examining them in detail, the author concludes that they all have some fatal flaw. The ultimate harmony view is particularly fascinating, however, because it is the last refuge of the theist. However, "the problem of good," the author claims which is isomorphic with the problem of evil, seriously qualifies and damages this gambit. The article concludes that the insolubility of the problem of evil is one good reason for not believing in any sort of theistic god whatever.

- MADISON, Peter.** Freud's Concept Of Repression And Defense, Its Theoretical And Observational Language. Minneapolis 1961.
- This book is an attempt to formulate clearly Freud's theory of repression, and then to relate this theoretical formulation to an observational language which will permit the scientific measurement of repression. The author believes that the terms 'repression' and 'defense', as used by Freud, "refer to the hypothesized interplay of force and counterforce (instincts and anticathexis) in psychic life." The attempt is made to state the observational "indicators" of this. The conclusion is that "there is simply no doubt that many, though not all, aspects of repression are measurable." At the present moment, he states, "It is a scientific disgrace that we do not have such measures—and, tragically, an unnecessary one."

- MAGID, Henry Meyer.** English Political Pluralism, The Problem Of Freedom And Organization. NY Columbia Univ Pr 1941.
- This book contains chapters on the political theories, roughly grouped under the name of pluralism, of John Neville Figgis, G D H Cole, and Harold Laski. They do not aim to offer a detailed exposition, but point out the main arguments advanced by the pluralists and seek to show how they contributed to, or fell short of, a rounded political theory. The final chapter, entitled, "Conclusions," fills about one-third of the book. The author believes that the value of the pluralist writings was mainly critical. They brought to bear upon a political theory that had become traditional certain developments in sociology and economics. Their purpose, however, was chiefly ethical: to provide a philosophy of freedom in opposition to organic theories of the state and without the limitations of classical liberalism.
- MAGID, Henry M.** Freedom And Political Unity. *Ethics* 51,144-157 Ja 41.
- MAGRATH, Oswin.** St Thomas' Theory Of Original Sin. *Thomist* 16,161-189 Ap 53.
- MAGUIRE, Daniel C.** Death By Choice. Garden City NY Doubleday 1974.
- This book argues that mercy death or death by choice is a defensibly moral option in certain extreme situations and that this should be recognized by law. The author develops his ethical methodology and shows how it applies to mercy death. He also shows briefly how this methodology shapes discussion of other life-taking situations such as suicide outside a medical context, abortion, war, and capital punishment.
- MAGUIRE, John.** Marx's Paris Writings: An Analysis. NY Harper & Row 1973.
- MAGUIRE, Joseph P.** Beauty And The Fine Arts In Plato: Some Aporiai. *Harvard Stud Class Philology* 70,171-193 1965.
- Eight problems are discussed: (1) The beauties of internal and of external purposiveness tend to merge; (2) Neither kind is especially pertinent to art; (3) Complications increase when the difficulty of (1) is applied to works of art specifically; (4) Moral and aesthetic values tend to merge; (5) The relations between truth and beauty; (6) Formal (abstract) vs. "literary" art; (7-8) "Formal" beauty without form, and a possible distinction between the "pure" tones etc. and the simple geometrical figures of Philebus 51c-d.
- MAGUIRE, Joseph P.** Plato's Theory Of Natural Law. *Yale Classical Studies* 10,151-178 1947.
- Plato's proximate theory includes his six political criteria of "right law," all of which can be reduced to the inculcation of virtue. A transitional phase is his conception of that virtue as based on the "natural" constitution of the soul. The ultimate theory is incomplete in *Gorgias* (which apparently makes the physical universe the model for political virtues) and in *Republic* (which apparently equates "nature" with the Ideas). The *Laws* indicates the complete theory: the physical universe is only a pointer to Mind which in turn, by analogy with the craftsman, implies an Idea of the Whole; that is, of purposive organization, or Good.
- MAGUIRE, Joseph P.** Some Greek Views Of Democracy And Totalitarianism. *Ethics* 56,136-143 Ja 46.
- MAGUIRE, Joseph P.** The Differentiation Of Art In Plato's Aesthetics. *Harvard Stud Class Philology* 68,389-410 1964.
- Plato gives us five possible criteria for distinguishing a work of art from an artifact or a natural object: his classifications of techné; and four conceptions—imitation relating to the model, inspiration to the artist, pleasure to the percipient, and beauty to the art-object. All are ambiguous. But, if not imitation itself, then the function of art's imitation; inspiration regarded both as a mode of cognition and as a source of expressiveness; and the unique combination in an art-object of the beauties of internal and of external purposiveness, all taken together, do seem to differentiate art from everything else.
- MAGUIRE, Joseph P.** The Individual And The Class In Plato's Republic. *Classical Journal* 60,145-150 1965.
- E Barker's dictum: "Plato thus assumes... that the character of the aggregate depends on that of the units..." is based on key passages which derive the characters of states from those characters which "preponderate" in them, and perhaps also on the way the primitive society evolves in it from a few individuals. But the "few" here are really sub-classes of productive art with one member each, and the "evolution" is an analysis of a three-class state presented as a synthesis.
- MAHADEVAN, T M P.** The Metaphysics Of Śamkara. *Phil East West* 3,359-363 Ja 54.
- MAHAN, Wayne M.** Tillich's System. San Antonio Trinity Univ Pr 1974.
- Wayne Mahan's book claims that he has discovered "the clue to Tillich's system: why it doesn't work, how it does work, what makes it up." What the author means by that claim is that the traditional approach to the understanding of Tillich's system is wrong, that the "method of correlation" is not the key to his system. Mahan goes on in Chapter 6 to demonstrate that Tillich's "ultimate optimism" had been formulated in his doctrine of Christ, God, the courage to be, and the idea of the Holy. The author attempts to relate Tillich's theology to several contemporary Protestant thinkers in order to provide a dialectic between Tillich's own claims about his theological principles and the interpretation and application of those principles by his commentators and disciples.

- MAJCHRAZAK, C J.** *A Brief History Of Bonaventurianism.* Washington DC C1957.
- MAKINSON, David C.** *Topics In Modern Logic.* NY Barnes & Noble 1973.
- This book is directed at the undergraduate student of philosophy who wishes to further his knowledge of modern logic beyond the elementary level. The formal material covers completeness results for two, three, and four valued logic, formalizations of various implication-operators, the intuitionistic interpretation of the logical connectives, and Zermelo's axiomatization of set theory. In addition, related philosophical questions are discussed: the problem of entailment, the import of the Löwenheim-Skolem theorem, the expressive powers of quantificational logic, the ideas underlying intuitionistic logic, the nature of set theory, and the relationship between logic and set theory.
- MAKKREEL, Rudolf A.** *Dilthey, Philosopher Of The Human Studies.* Princeton NJ Princeton Univ Pr 1975.
- The development of Dilthey's mature philosophy is examined by relating his aesthetics and descriptive psychology to his theories of history and the human studies. Part I introduces Dilthey's conception of the human studies and their distinction from the natural sciences. Part II shows that many of Dilthey's methodological and epistemological claims about the human studies are first worked out in his aesthetic writings. The character of Dilthey's Critique of Historical Reason is examined in Part III. An account of Dilthey's turn to hermeneutics and the impact of Husserl leads to an analysis of his final conception of the human studies and the historical world. Part IV considers Dilthey's philosophy of life and his Weltanschauung theory. Themes developed throughout the book are brought to bear on a concept of style revealing the mutual implications of aesthetics and history.

- MALCOLM, Norman.** *Dreaming.* NY Humanities Pr 1959.
- The author argues "that the idea that someone might reason, judge, imagine, or have impressions, presentations, illusions or hallucinations, while asleep, is a meaningless idea in the sense that we have no conception of what could establish that these things did or did not occur." What establishes that a person dreamt is his telling a dream, and "the concept of dreaming is derived, not from dreaming, but from descriptions of dreams." A physiological criterion of dreaming is held to be unacceptable because it is based on the unsupported assumption "that a dream must have a definite location and duration in physical time." Neither can the principle of coherence be accepted as a criterion for determining whether one is awake or dreaming, since it is possible that a person should dream a coherent structure of perceptions. Finally, "the famous philosophical question, 'How can I tell whether I am awake or dreaming?', turns out to be quite senseless since it implies that it is possible to judge that one is dreaming, and this judgment is as unintelligible as the judgment that one is asleep."
- MALCOLM, Norman.** *Knowledge And Certainty: Essays And Lectures.* Englewood Cliffs NJ Prentice-Hall 1963.
- MALCOLM, Norman.** *Memory And Mind.* Ithaca NY Cornell Univ Pr 1977.
- With regard to theories of mental mechanisms of memory, Malcolm argues that objects of memory are more various than often supposed; that it is not necessary to regard remembering as wither direct or representational awareness; that the words "memory" and "remember" are used to apply to a wide range of cases; that remembering is "amorphous" and cannot easily be thought of as "mirroring" or "picturing." Theories of physical mechanisms of memory, he argues, it is a mistake to hold that the "causal ingredient in memory requires the assumption either of causal laws or of a temporally continuous chain of causation; that philosophical error motivates the notions of "physiological memory traces and of a cerebral storage system"; that while "brain stimulations... 'trigger' various psychological and physical responses... the empirical evidence does not indicate one-to-one correlations...."

- MALCOLM, Norman.** Descartes's Proof That His Essence Is Thinking. *Phil Rev* 74,315-338 Jl 65.
- Malcolm shows the inadequacy of the three proofs Descartes offered to show that his essence was to think. He constructs another proof out of various passages in Descartes: X is my essence if it is the case that if and only if I am aware of x then necessarily I am aware of myself. But thinking can be substituted for x here; so my essence is thinking. Malcolm shows this new argument to be invalid but to illuminate Descartes' transition from cogito ergo sum to sum res cogitans.

- Professor Ayer's criticisms, in *The Problem of Knowledge*, of Ryle's treatment of perception are examined and rejected. Ryle's thesis is that the concept of perception is an achievement concept, and that consequently, it is a mistake to look for experiences which will indicate what is perceived. It is argued that Ayer does not succeed in making out his case that there is an experiential aspect in perceptual situations which sense-data philosophers have rightly called attention to but which Ryle's analysis neglects. By paralleling perceptual situations with non-disputable achievement situations, the paper tries to show where Ayer errs in his claim that there are experiences which must be identified with what is perceived.

MANDELBAUM, Maurice (ed). *Phenomenology And Existentialism.* Baltimore Johns Hopkins Pr 1967.

This book contains previously unpublished essays contributing to a knowledge of the history of phenomenology and existentialism, and to an understanding of some of their chief exponents.

MANDELBAUM, Maurice. *History, Man And Reason: A Study In Nineteenth Century Thought.* Baltimore Johns Hopkins Pr 1971.

A critical survey of dominant tendencies in nineteenth-century philosophy reveals three basic presuppositions that were prevalent in the period, being shared by members of all schools of thought: historicism, a belief in the malleability of man, and a distrust of the human intellect. The sources of these presuppositions and the different forms that they assumed are analyzed, and each of the three presuppositions is subjected to philosophic criticism.

MANDELBAUM, Maurice. *Philosophy, Science, And Sense Perception: Historical And Critical Studies.* Baltimore Johns Hopkins Pr 1964.

An analysis of Locke's realism with reference to his doctrine of primary and secondary qualities and of substance leads to an examination of the positions of Newton and of Boyle regarding the justification of our knowledge of the physical world. In the third essay, Hume's skeptical arguments are examined and rejected. The final essay defends a radical critical realism as a means of relating the world of sense perception to the nature of the physical world.

MANDELBAUM, Maurice. *The Phenomenology Of Moral Experience.* Glencoe IL Free Pr 1955.

After a discussion of alternative methods in ethics, three basic types of moral judgments are distinguished and analyzed with a view to establishing what comprise their common features and wherein they differ. Questions of relativity and objectivity are discussed, and a distinction is drawn between the validity and the truth of a moral judgment. Based on this distinction answers are proposed concerning the nature and limits of objectivity in our moral judgments.

MANDELBAUM, Maurice. "A Note On Emergence" in *Freedom And Reason*, Salo Baron And Others (eds). Glencoe IL Free Pr 1951.

This article is an analysis of the concept of emergence that combines distinctions originally proposed by A O Lovejoy and C D Broad and suggests a position that escapes some usual objections to both emergence and reductionism.

MANDELBAUM, Maurice. "Historicism" in *Encyclopedia Of Philosophy*, 22-25. NY Free Pr 1967.

This article traces the history of the concept of "Historicism" and analyzes its variant meanings.

MANDELBAUM, Maurice. "Objectivism In History" in *Philosophy And History*, Sidney Hook (ed), 43-56. NY New York Univ Pr 1963.

This article is a discussion and criticism of Morton G White's views regarding the logic of historical narration.

MANDELBAUM, Maurice. "Two Moot Issues In Mill's Utilitarianism" in *Modern Studies In Philosophy: John Stuart Mill*, J B Schneewind (ed), 206-233. Garden City NY Doubleday Anchor 1968.

MANDELBAUM, Maurice. A Critique Of Philosophies Of History. *J Phil* 45,365-377 JI 48.

This article is an analysis of the basic presuppositions of traditional philosophies of history and an attempt to show that these presuppositions necessarily lead to conflicts with empirical historiography.

MANDELBAUM, Maurice. A Note On "Anthropomorphism" In Psychology. *J Phil* 40,246-248 Ap 43.

Paradoxically, those psychologists who stress an evolutionary continuity between animals and men insist that "anthropomorphism" must be rejected in psychology. Objection is taken to the way in which this methodological contention is apt to be applied.

MANDELBAUM, Maurice and Lamprecht, Sterling P and Ferrater-Mora, José. Comments On The Symposium "What Is Philosophy Of History?" *J Phil* 49,350-361 My 52.

MANDELBAUM, Maurice. Arthur O Lovejoy And The Theory Of Historiography. *J Hist Ideas* 9,412-423 O 48.

The article gives an analysis of the philosophic bases of Lovejoy's theory of historiography, and an exposition of that theory.

MANDELBAUM, Maurice. Causal Analysis In History. *J Hist Ideas* 3,30-50 Ja 42.

This is an examination and criticism of humanistic and relativistic arguments against reliance on causal explanation in history. It is pointed out that the rejection of causal analysis is incompatible with the actual methods historians use, and the applicability of such analyses is defended.

MANDELBAUM, Maurice. Concerning Recent Trends In The Theory Of Historiography. *J Hist Ideas* 16,506-517 O 55.

The article gives an account of views widely held in the three preceding decades concerning (1) the objectivity of historical knowledge; (2) the place of historiography in the economy of knowledge; and (3) the subject-matter of the discipline of history.

It is suggested that the definition of this subject-matter is far more crucial to the theory of historiography than has commonly been recognized.

MANDELBAUM, Maurice. Darwin's Religious Views. *J Hist Ideas* 19,363-378 Je 58.

As is well known, Darwin's original position with respect to theological questions was on the whole orthodox, but this position was progressively undermined throughout the course of his life. The present article traces the course of this process of change.

MANDELBAUM, Maurice. Determinism And Moral Responsibility. *Ethics* 70,204-219 Ap 60.

This paper deals with the relation between that form of determinism which denies freedom of choice and our beliefs concerning moral responsibility. While it is shown that the most prevalent, traditional form of determinism regarding choice does in fact conflict with our beliefs concerning moral responsibility, it is also shown that there is an equally strict, physiologically-based form of determinism which does not involve that conflict.

MANDELBAUM, Maurice. Family Resemblances And Generalization Concerning The Arts. *Amer Phil Quart* 2,219-228 JI 65.

A critical appraisal of the manner in which Wittgenstein's doctrine of "family resemblances" has been used to deny the possibility of formulating adequate generalizations in aesthetic theory. Special attention is paid to views held by Paul Ziff, Morris Weitz, and P O Kristeller.

MANDELBAUM, Maurice. Freedom And The Path To Walden Pond. *Educational Record* 52,377-379 1971.

Criticism of that conception of freedom which holds that social institutions necessarily restrict the freedom individuals rightfully seek.

MANDELBAUM, Maurice. Historical Determinism And The Gospel Of Freedom. *Journal Of General Education* 6,7-16 1951.

Attention is called to some illusions connected with excessive optimism concerning the range of human freedom. It is also shown that one argument for historical determinism, and much of the plausibility of that doctrine, rests on a fallacy, here termed "the retrospective fallacy."

MANDELBAUM, Maurice. Historical Explanation: The Problem Of 'Covering Laws'. *Hist Theor* 1,229-242 1961.

This article is a critical examination of the covering-law model of historical explanation as well as of some of the positions on the basis of which it has been criticized.

MANDELBAUM, Maurice. History And Criticism: A Commentary. *New Literary History* 5,613-618 1973-74.

In commenting on articles appearing in the same issue, a distinction is drawn between questions relating to the way modes and standards of criticism are related to historical change, and the different question as to how historical studies are related to the practice of criticism. Using philosophy as an example, it is contended that contrary to much that is typical of current practice, sound criticism presupposes and depends on historical interpretation.

MANDELBAUM, Maurice. On The Use Of Moral Principles. *J Phil* 53,662-670 O 56.

This paper examines and rejects the thesis that to verify a particular moral statement is to show that it follows deductively from a general moral principle which serves as its ground. Though general moral principles cannot serve this justifying function, it is pointed out that they do have other important uses in moral argumentation. Justification, however, is claimed to involve an appeal not to general principles but to what is found to be morally binding in specific cases.

MANDELBAUM, Maurice. Philosophy, Science, And Sense-Perception. *Proc Amer Phil Ass* 36,5-20 O 1963.

MANDELBAUM, Maurice. Professor Ryle And Psychology. *Phil Rev* 67,522-530 O 58.

This is an analysis and criticism of Ryle's characterization of the province of psychology. This is followed by criticism of his view that if philosophers avoid confusions in "logical geography," problems concerning mind and body, and problems concerning the implications of physiological knowledge for the theory of perception, would simply disappear.

MANDELBAUM, Maurice. Scientific Background Of Evolutionary Theory In Biology. *J Hist Ideas* 18,342-361 Je 57.

This paper aims to show how the investigations in five different areas paved the way for the formulation and adoption of evolutionary theory in biology. These areas were: (1) the history of the earth; (2) the problem of species; (3) the relation of man to the rest of the animal kingdom with respect to problems of classification, the antiquity of the human species, and problems concerning the races of men; (4) epigenesis versus preformationism; and (5) ecology and population theory.

MANDELBAUM, Maurice. Some Neglected Philosophic Problems Regarding History. *J Phil* 49,317-328 My 52.

The main species of theories referred to as "philosophies of history" are first distinguished and characterized. It is then argued that questions concerning the nature and status of societal facts are directly relevant to issues which arise both in formal (i.e., "critical") and material (i.e., "speculative") philosophies of history.

MANDELBAUM, Maurice. The Meaning Of Human History. *Rev Metaph* 2,107-115 S 48.

MANDELKER, Jakob. *Matter, Energy, Mechanics.* NY Philosophical Lib 1954.

MANDEL, George and Kessen, William. *The Language Of Psychology.* NY Wiley 1959.

This is a logical and empirical analysis of the language of psychology. Although primarily designed for psychologists and other behavioral scientists, it has a good deal of philosophical material. The book begins in a first section by tracing developments of the language of psychology from everyday language to explicit scientific formulations. There is a discussion of the vocabulary of psychological terms and definitions: a phenomenological language is rejected, so is strict physicalist

- reductionism; instead, a modified behavioral criterion is suggested. A second section deals with the connecting of terms and simple sentences into more complex scientific theories, and with induction, deduction, the nature of explanation and other philosophical issues.
- MANHEIM, Werner.** *Martin Buber.* NY Twayne 1974.
- MANICAS, Peter T.** Aristotle, Dispositions And Occult Powers. *Rev Metaph* 18,678-689 Je 65.
- The author argues that Aristotle's science is not, as commonly charged, occult, and that, while open to misinterpretation, Aristotle's central concepts, such as dynamis, energeia, and telos, may be satisfactorily construed in the language of dispositions. He then discusses the limitations of Aristotelian explanation and reviews the objections raised by Francis Bacon and William Gilbert. Finally, he argues that if a disposition sentence is to be taken as an abbreviation for a set of counterfactuals, then dispositional explanation is limited in much the same ways as Aristotelian explanation.

- MANUEL, Frank E.** *Shapes Of Philosophical History.* Stanford CA Stanford Univ Pr 1965.
- This book contains seven lectures describing views of history from Greco-Roman times to the present. Among the subjects dealt with in individual lectures are Augustine and Joachim, Renaissance writers, Kant, and French and German thinkers of the 18th and 19th centuries. In his first lecture the author describes his "central theme" as the polarity between "cyclical" and "progressive" philosophies of history.
- MANUEL, Frank E.** *The Eighteenth Century Confronts The Gods.* Cambridge Harvard Univ Pr 1959.
- MANUEL, Frank E.** *The New World Of Henri Saint-Simon.* Cambridge Harvard Univ Pr 1956.
- Eschewing the interpretation that makes Saint-Simon a "precursor" of late 19th or 20th century doctrines, or that which depicts him as a utopian socialist, Professor Manuel portrays him as a transition figure in the history of ideas from the world of the *philosophes* to modern industrial-scientific society. As for the Saint-Simon vs. Comte dispute, "It is impossible to deny that both of Comte's fundamental conceptions, the law of the three states and the hierarchic classification of the sciences, were present in embryonic form in Saint-Simon's writings long before he knew Comte and in more developed form during the years of their collaboration."

- MARCEL, Gabriel.** *The Decline Of Wisdom.* NY Philosophical Lib 1955.
- MARCEL, Gabriel.** *The Existential Background Of Human Dignity.* Cambridge Harvard Univ Pr 1963.
- This book is an autobiographical as well as philosophical reflection on the author's ideas—their genesis and growth. Detailed attention is paid to Marcel's plays; his interest in music is also stressed. The author's central concern is with "the necessity of restoring to human experience its ontological weight," and in this connection he discusses such topics as "participation," "existence," "fidelity," "mystery," "ambiguity," and "dignity." The existential and dialogic dimensions of the philosopher's quest are emphasized. Marcel's final appeal stresses the integrity of the person who fights against the "desacralization" of the world.

- MARCUSE, Herbert.** *An Essay On Liberation.* Boston Beacon Pr 1969.
- MARCUSE, Herbert.** *Counterrevolution And Revolt.* Boston Beacon Pr 1972.
- Marcuse envisions a revolution in the making which would be the most radical to occur in history. Capitalism is mounting a counterrevolution which seems to be undermining its very existence. The future revolution will involve a new social order, as well as a change in man's relations to nature. Art can contribute to the revolution but only as aesthetic form and not in the modes of anti-art.
- MARCUSE, Herbert.** *Eros And Civilization: A Philosophical Inquiry Into Freud.* Boston Beacon Pr 1955.
- Attacking the Neo-Freudians on Freud's own premises, Marcuse challenges the theses deriving from *Civilization and Its Discontents* by arguing that the very existence of civilization depends on the gradual abolition of instinctual constraints and the strengthening of the culture-building, life-enhancing power of Eros. In Chapter V entitled "Philosophical Interlude" he depicts the development of Western philosophy as "the struggle between the logic of domination and the will to gratification... against the conception of being in terms of Logos rises the conception of being in a-logical terms: will and joy."
- MARCUSE, Herbert.** *One Dimensional Man.* Boston Beacon Pr 1964.
- This book is a critique of contemporary society as one in which there remains no significant class or group capable of radically opposing things as they are. Marcuse works on the assumption that advanced industrial society is indeed sick, much as some recent sociologists have depicted it to be. He sees evidence of alienation in political and cultural life, in the technical jargon of the bureaucracy, in the technological cult of "operationalism," and especially in contemporary analytic philosophy, which he sees as the triumph of "one-dimensional thought." His conclusion is: at this juncture in history, he believes, the only possible task for "critical philosophy" is to be negative.

MARGENAU, Henry (ed). *Integrative Principles Of Modern Thought*. NY Gordon & Breach 1972.

This work grew out of the activities of the "Center for Integrative Education," whose aim is to provide methods and materials to overcome the divisiveness of modern education. It includes the following essays: "The Method of Science and the Meaning of Reality," and "Some Integrative Principles of Modern Physics," "quantitization as an Integrative Concept," "Integrative Principles of Biology," "Integrative Principles in Human Society," "The Metric of the Living Orders," "Integrative Principles of Art and Science," "Integrative Concepts in the Logic of Relations," and "Science and Faith."

MARGENAU, Henry A. Foundations Of The Unity Of Science. *Phil Rev* 50,431-438 JI 41.

MARGENAU, Henry. *Ethics And Science*. Princeton NJ Van Nostrand 1964.

The author holds that "human societies would be impossible except for the order and uniformities ethics has indeed achieved," and that ethics is the accomplishment which elevates man above nature and has enabled humanity to develop scientific disciplines. Margenau is interested in developing both transindividual and transcultural standards. His book is designed to bring out parallels between ethics and science without reducing ethics to science; his approach is similar to that developed by F S C Northrup. Primary values, although vaguely connected with human nature, are held to be not derivable from any kind of knowledge, and ethical imperatives are not derivable from any other principles, including primary values.

MARGENAU, Henry. *Nature Of Physical Reality: A Philosophy Of Modern Physics*. NY McGraw-Hill 1959.

The author here provides a philosophy of modern physics. The book was written, states the author, from a profound conviction that men engaged in the development of physical theory can profit from philosophical reflection about the meaning of their research, and that modern physics holds a message for philosophy. He believes that "the attitudes of uncritical realism, unadorned operationalism, and radical empiricism, which pervade most of the discussions and much of the thinking on subjects of science, are outmoded and in disharmony with the successful phases of contemporary physics." He starts by analyzing all experience, not only the peripheral part called *empirical knowledge* in a narrow sense. He ends with an epistemology which is in keeping with both classical physics and the quantum theory, a philosophy of science which allows this reputedly heterodox new discipline, to be seen as a culmination of methods long present in natural science.

MARGENAU, Henry. *Open Vistas, Philosophical Perspectives Of Modern Science*. New Haven Yale Univ Pr 1961.

This book discusses the philosophical implications of modern physics; philosophical theories are drawn from and tested by scientific experiments. Science correlates constructs with experience in such a way as to satisfy requirements like simplicity, logical fertility, and empirical verifiability. It is socially as well as scientifically important that more facts be conceptually interpreted. Scientific explanation begins with postulates which are not self-evident but are demonstrated by a combination of induction and deduction. Aesthetic symmetry and scientific lawfulness are analyzed in terms of invariance. It is shown that the price of invariance is always relativity. It is argued that the stuff of the universe is neither a continuous material ether nor discrete bits of matter but onta with primarily mathematical properties.

MARGENAU, Henry. *The Nature Of Physical Reality: A Philosophy Of Modern Physics*. NY McGraw-Hill 1950.

MARGENAU, Henry. *Thomas And The Physics Of 1958: A Confrontation*. Milwaukee Marquette Univ Pr 1958.

Thomas Aquinas' epistemological position fits better with contemporary science than with earlier mechanistic views. His Aristotelian resolution of the relation between reason and sensation in human knowledge is superior to that of recent Humeans and logicians. For, he neither reduces reason to sensory data nor seeks a solution through "verbal therapeutics." His interpretation of the creative role of reason and its relation to sensory experience harmonizes with the lecturer's "rule of correspondence" for resolving the rationalism-empiricism conflict. Thomas' metaphysics, concerned with ontological reality beyond experience, is outside science. However, Thomas denies any "conflict between natural science and revelation." His belief in creation *ex nihilo* does not contradict the physical conservation law (a mathematical demonstration is given).

MARGOLIS, Joseph Zalman. *Negativities, The Limits Of Life*. Columbus OH Merrill 1975.

This study sets out a domain of evils, limitations, "negativities," and problem areas in human life, such as death, war, crime, illness, inequality, and waste; (1) explores the influence of divergent ideologies on how we view those evils; and (2) tracks down a selection of ideologically neutral data, conceptual categories, explanations, and consequences of those evils, which every ideology must take account of. The aim of the third component is to show how, notwithstanding the divergencies based on cultural inputs, the ideologically neutral data and analyses form an *objective* framework for cooperation among differing cultures and philosophies toward reducing the devastating effect of the negativities.

MARGOLIS, Joseph. *Psychotherapy And Morality: A Study Of Two Concepts*. NY Random House 1966.

In a closely reasoned essay, Margolis focusses on the relationship between moral and therapeutic values. His linguistic and logical analysis is a complement (and corrective) to the work of such thinkers as Fromm, Erikson, Rieff, Maslow, etc. The central theme is the insistence that psychiatry is more than a technical discipline, neutral with respect to moral values. An all too brief chapter on the relationships of psychotherapy, morality, and religion concludes the book. In a word, Margolis suggests that religion, beginning with the 'ontological' problem (man's finitude) tends toward moral legislation; and psychotherapy beginning with technic has a similar tendency. Thus the field where both disciplines intersect is in the area of moral judgment—a useful notion in the light of current efforts to arrive at a working relationship between religion and psychiatry.

MARGOLIS, Joseph. *The Language Of Art And Art Criticism: Analytic Questions In Aesthetics*. Detroit 1965.

In the author's view "aesthetics is only a very loosely collected system of issues bearing on our interest in the arts." The orientation is analytic and the methods adopted are in the tradition of linguistic analysis. The division of the book into five parts reflects only the most obvious clusters of problems the author believes can be found. The author's main purpose is to criticize those aestheticians who override the proper boundaries of aesthetic issues instead of confining themselves to the different forms our aesthetic interest in the various arts takes. The actual function of aesthetic works is to rough out areas for investigation rather than denote items within these areas, as many aestheticians have mistakenly believed. The author advocates a fruitful approach, an "engagement" with the arts in a discussion of such topics as the differences between the arts in relation to the identity of works of art and how these differences bear on the criticism, interpretation and evaluation of works of art.

MARGOLIS, Joseph. "That All Men Are Created Equal". *J Phil* 52,337-345 Je 55.

MARGOLIS, Joseph. Aesthetic Perception. *J Aes Art Crit* 19,209-214 Wint 60.

MARGOLIS, Joseph. Certainty About Sensations. *Phil Phenomenol Res* 25,242-247 D 64.

In this article the distinction is drawn between the experience of pain, which is first person and describing; and, the cause of pain, which is third person and dealing with probable causes. It is maintained that my own reports and descriptions are not controvertible by another. Also, truth conditions of first person sentences are decided by comparison with truth conditions of perceptual statements. The conclusion is drawn that a man knows for certain when he is in pain, but no science can rest on it!

MARGOLIS, Joseph. Creativity, Expression, And Value Once Again. *J Aes Art Crit* 22,21-24 Fall 63.

MARGOLIS, Joseph. Describing And Interpreting Works Of Art. *Phil Phenomenol Res* 21,537-542 Je 61.

MARGOLIS, Joseph. Dracula The Man: An Essay In The Logic Of Individuation. *Int Phil Quart* 4,541-548 D 64.

The application of the concept of "one and the same individual" cannot be determined by purely formal considerations of identity. Numerical identity requires a substantive rule about what is to count as an individual. Characteristically, we individuate things by applying the criteria for membership in a given species. But individuation does not logically depend on the concept of such membership; on the contrary, membership presupposes a rule of individuation—as anomalies like changing (or appearing to change) species and being in two places at once make clear. The reasons for counting things as "one and the same" are quite various and

may include, for instance, considerations of legal responsibility and the like—that is, reasons not reducible to merely arithmetic or logically formal considerations.

MARGOLIS, Joseph. Existentialism Reclaimed. *Personalist* 42,14–20 Wint–Ja 61.

MARGOLIS, Joseph. Facts And Values And Sciences Of Value. *Zygon* 4,252–260 S 69.

MARGOLIS, Joseph. In The Name Of Human Finitude: An Examination Of Reinhold Niebuhr's *Christian Realism And Political Problems*. *J Phil* 53,276–283 Ap 56.

MARGOLIS, Joseph. Kafka Vs Eudaimonia And Duty. *Phil Phenomenol Res* 19,27–42 S 58.

The author compares the treatment of moral problems in Plato's *Republic*, Kant's *Foundations of the Metaphysics of Morals*, and Kafka's *Metamorphosis*, and argues that the latter is an implicit critique of the other two. In Plato there is a confidence in the social order in which the individual may find his appropriate freedom. In Kant there is the serious responsibility of a rational and free individual towards the requirements of the ideal of universal mankind. In Kafka there is the isolating, restrictive and paradoxical conditions under which humanity exerts its particular freedom. These three exhibit the main theme of the history of Western social experience.

MARGOLIS, Joseph. Mr Weitz And The Definition Of Art. *Phil Stud* 9,88–94 1958.

Morris Weitz has put forth the view that there is a basic error in attempts to form a "logical" definition of art. According to Weitz knowing what art is is not apprehending some manifest or latent essence but being able to recognize, describe, and explain those things we call 'art' in virtue of certain similarities. The author argues that Weitz's objections to defining art are for the most part practical and that he consistently confuses in his argument logical and merely practical reasons.

MARIENTHAL- MASCHLER, Chaninah and Johnstone Jr, Henry W. Skepticism And Inferior Knowledge: A Note On Aristotle's Pluralism. *Phil Phenomenol Res* 22,472–480 Je 62.

The function and peculiar character of Aristotle's pluralism is explained. It is maintained that the pluralism serves as a rejoinder to scepticism; for instance, the sceptic ignores the peculiarity of the nature of knowledge in political life. The plurality of types of knowledge is shown also as not merely a reply to scepticism, but as attended to by Aristotle independently. The last half of the article intends to show

that Aristotle envisaged an ordered plurality of prior and posterior with dependency as the ordering principle, and that, therefore, "inferior knowledge" need not form a basis for doubt; Aristotle retains both variety and excellence.

MARILLA, E.L. The Ramparts We Watch? *Personalist* 41,158–175 Spr–Ap 60.

MARITAIN, Jacques and others. *Science, Philosophy And Religion: A Symposium*. NY 1941.

The topics run from arguments for God, modern physics, empirical theology, archeology, literary scholarship, to Einstein's own version of religion as cosmic feeling.

MARITAIN, Jacques. *Creative Intuition In Art And Poetry*. NY Pantheon Books 1953.

MARITAIN, Jacques. *Education At The Crossroads*. New Haven Yale Univ Pr 1960.

Its four chapters cover: the aims of education, the dynamics of education, the humanities and liberal education, and the trials of present-day education.

MARITAIN, Jacques. *Human Rights: Comments And Interpretations*. NY Columbia Univ Pr 1949.

MARITAIN, Jacques. *Man And The State*. Chicago Univ Of Chicago Pr 1951.

The author, a leader of the Neo-Thomist group in modern thought, provides a statement of the basic principles of the democratic charter in contemporary context. He establishes firm ground for his exposition by a redefinition of terms, *nation, state, the concept of sovereignty, human rights and natural law*. These terms and their meanings are discussed and combined to provide not merely a formulation of the central problem, *the role of authority in a free society*, but definite answers to that problem.

MARITAIN, Jacques. *Man's Approach To God*. Latrobe PA Archabbey Pr 1961.

The problem which Maritain deals with is "our knowledge of God... which depends on the natural forces of the human mind and that approach to God which depends on the supernatural gift of faith." Modern man, the author maintains, wants to find again the "sense of Being." He cannot do so, however, by retreating to the irrationalism of the philosophies of existence, but rather by entering the realm of metaphysics. Only in this way can the philosopher make God's existence intellectually sure. Man's prime intuition is the intuition of his existence as well as the existence of things. This is man's awareness of the intelligible value of Being.

MARITAIN, Jacques. *Moral Philosophy, An Historical And Critical Survey Of The Great Systems*. NY Scribner's 1964.

The position of the book is that of a natural law philosophy, in the sense that man has within him a pre-philosophical recognition of an ideal end which accords with theological knowledge but can be independently established by natural reason. St Thomas has not given us this natural ethics but its theological counterpart; these two volumes will give it. The emphasis of this volume is therefore on the great rivals to that position: Hegel, Marx, and Comte. Only one sentence is given to Bentham and Mill, and only a footnote to Hume; Butler is not mentioned, nor is G E Moore nor Charles Stevenson, while 90 pages are given to Hegel and 90 to Comte. Although a selective gathering of data is justifiable, there is some cultural relativism at work here: to a European the chief competitor to Christian Idealism may be atheistic Marxist materialism, but to (say) an American it is disinterested, agnostic materialism of the Hobbesian-Behavioristic sort.

MARITAIN, Jacques. *On The Philosophy Of History* (ed By Joseph W Evans). NY Scribner's 1957.

An opening chapter discusses the subject from the standpoint of the theory of knowledge, concluding that "history is not a science" and "the philosophy of history is no part of metaphysics... (but) pertains to moral philosophy." The author then discusses "functional laws" and "vectorial laws." He also believes that there is a "growth in awareness" and in "our knowledge of moral laws." A fourth chapter is largely theological, and there are short concluding critical remarks on Toynbee.

MARITAIN, Jacques. *On The Use Of Philosophy; 3 Essays*. NY Atheneum 1965.

MARITAIN, Jacques. *Reflection On America*. NY Scribner 1958.

In November, 1956, Maritain lectured at the University of Chicago, offering his views on various aspects of American life and culture. This book is a revision of these informal talks. His topics include a denial of the alleged materialism of the United States, the thesis that goodness is a peak value in America, discussions of the sex attitudes of Americans and of the future of this country. The racial problem is treated with a surprising awareness of the difficulties involved. Generally speaking, Maritain approves of America and its ideals.

MARITAIN, Jacques. *St Thomas And The Problem Of Evil*. Milwaukee Marquette Univ Pr 1942.

Professor Maritain outlines the Thomistic solution of one of the most difficult problems of philosophy. Evil is studied from both the metaphysical and the moral point of view. The privation theory, with its Augustinian background, is explained. Maritain avoids the tendency, evident in some Scholastic treatises, to over-emphasize the negative aspects of evil.

MARITAIN, Jacques. *The Dream Of Descartes*. NY Philosophical Lib 1947.

MARITAIN, Jacques. *The Education Of Man: The Educational Philosophy Of Jacques Maritain*, Donald And Idella Gallagher (eds). Garden City NY Doubleday 1962.

MARITAIN, Jacques. *The Range Of Reason*. NY Scribner's 1952.

MARITAIN, Jacques. *The Responsibility Of The Artist*. NY Scribner 1960.

This little book is remarkable for the wealth of explanatory principles it invokes: Art as a vital power in the soul of the artist, the Practical Intellect, the Speculative Intellect, will, appetite, Art as an absolute, creative or poetic intuition, Reason, Beauty as a transcendental end, the order of making, the order of doing, the Good in general, Good as transcendental, Good as coterminous with Being, the Desirable, the order or universe of morality. The author's theme is that the end of Art is the good of the work, the end of Morality the good of man; the former is neither directly and explicitly subordinate to the latter, nor wholly independent of it, artists and their

audience being human. In cases of apparent conflict, "Charity is the key." In this light, broken into a thousand glittering splinters of ends, virtues, actions, essences, dominations and powers, we see, as if for the first time, the excesses of Art for Art's sake, the dangers of censorship by a temporal community, and the relation of poetry to the perfection of human life.

MARITAIN, Jacques. *Truth And Human Fellowship.* Princeton NJ Princeton Univ Pr 1957.

Originally presented as an address at Princeton, this little pamphlet shows Maritain at his most congenial. Taking a position against relativism, he argues persuasively that zeal for truth is compatible with human "fellowship"—which word he prefers to "tolerance."

MARK, Max. Reality And Theory. *Ethics* 73,56-61 O 62.

Social theory requires an analysis of the concept of social reality which does not use physical reality, either mechanical or biological, as a model. The social theorist's task is first to develop an overview of social reality, then to develop conceptual tools, and finally to turn to concrete problems and theoretical frameworks in which to deal with them. An investigation of social phenomena must be rooted in social philosophy, i.e., in the contest of different social philosophies.

MARK, Thomas Carson. *Spinoza's Theory Of Truth.* NY Columbia Univ Pr 1972. Spinoza's concept of truth is often described as that of coherence, but examination of textual evidence shows that neither the coherence theory nor the correspondence view to which it is usually opposed satisfactorily characterize Spinoza's position. Instead, his position has much in common with the older theory of ontological truth. Furthermore, it turns out that the concept of truth, construed in this way, is much more central in Spinoza's philosophy than has been generally recognized, and that it has important affinities with the concepts of substance and of freedom.

MARNELL, William H. *Man-Made Morals: Four Philosophies That Shaped America.* Garden City NY Doubleday 1966.

An attempt to trace the conflict in Anglo-American history between the concept of the moral order as naturally or divinely instituted, and as "man-made." The latter, an implication of the contract theory of society, began to replace the former in about 1660, became dominant in about 1860, and in the author's view is still potent as we enter the last third of the twentieth century. By "man-made" moral order, the author understands the notion "that the moral foundations of society are man-made, and hence that right and wrong are values induced and created by observation and experimentation." He holds that this concept of the moral order has "crested" four

times in the past three hundred years: (1) in Deism in the eighteenth century (2) in Utilitarianism in the midnineteenth century (3) in Social Darwinism in the late nineteenth century and (4) in Pragmatism in our own century. Beginning with Hobbes and Locke, the thought of numerous representatives of each of these movements is presented. In general, the author sides with the upholders of a natural or divine moral order.

MARSHALL, James. *The Freedom To Be Free.* NY Day 1943.

When Gandhi used the phrase "freedom to be free" it was evident what he meant by being free, but Mr Marshall raises a more general problem here and conceives freedom in its most personal meaning. He is concerned with freedom from paternalism as a means of promoting growth toward the freedom which mature individuals can enjoy. Parents have a temporary utility, but paternalism is a vice into which both individuals and institutions tend to fall and which prolongs repressive power long after the need for it has passed. With this problem as his chief concern, the author shows how both educational and political theory must utilize psychology.

MARTI, Fritz. *Religion, Reason, And Man.* St Louis Green 1974.

Professor Fritz Marti's book is made up of seven chapters dealing with important topics in the Philosophy of Religion—the problem of doubt, the language of religion, the nature of super temporal ideas, the proofs of the existence of God, and positive and negative theology, etc. Included at the conclusion of each chapter is a question and answer section, which appears to be a transcribed report of the actual questions asked by the students who attended Professor Marti's lectures on the subject "Religion, Reason and Man" on the Edwardsville campus in the summer of 1970.

MARTIĆ, Milos. *Insurrection: Five Schools Of Revolutionary Thought.* NY Dunellen 1975.

This book discusses the ideology, organization, and strategies of five roughly delineated schools of revolutionary thought. The first chapter deals with "Marxist Hard Liners" and Mao Tse-tung. Chapter 2 considers Latin American Marxists and Chapter 3 focuses upon African revolutionaries. Chapter 4 discusses the "Radical Left" as an international school and the fifth chapter considers the methodological and research practices of scholars from Western Europe and the United States.

MARTIN JR, James A. *The New Dialogue Between Philosophy And Theology.* NY Seabury Pr 1966.

A comprehensive yet brief and clear guide to the influence of analytic philosophy on the philosophy of religion. A short account of the early history of the analytic movement is followed by summaries of the thought of more than thirty writers of the last twenty years. Flew, Blackstone, Mitchell, Hepburn, Hick, Wittgenstein, Wisdom, C B Martin, Malcolm, Hare, Braithwaite, and Ramsey are only some of the authors discussed. Because Martin never presupposes knowledge of technical analytic philosophy, this book will be useful to readers with little or no philosophical training.

MARTIN JR, James Alfred. *Empirical Philosophies Of Religion, With Special Reference To Boodin, Brightman, Hocking, Macintosh, And Wieman.* NY King's Crown Pr 1945.

In this essay of four chapters the author examines five systems: Those of Boodin, Brightman, Hocking, Macintosh and Wieman, giving the title to his book. In his

conclusion he shows how dubious is the word empirical and how each moves in his own field of presuppositions, which is hardly empirical in the strictest sense.

MARTIN, Bernard. *The Existentialist Theology Of Paul Tillich.* NY Bookman 1963. Tillich's anthropology is approached here from a philosophical standpoint. Chapters are devoted to his life, his correlation of philosophy and theology, and his "doctrine of Reason and Revelation, God, the Christ, and 'the New Being'." The author criticizes Tillich's position on major points: the meaning of objective reason is held to be "thoroughly ambiguous," the contention that "the final revelation in Jesus as the Christ has been shown to have overcome the conflicts and contradictions of human reason" is denied, and the doctrine of God is said "to bristle with logical difficulties and ambiguities that do not on the surface appear susceptible to harmonization."

MARTIN, C B and Deutscher, Max. Remembering. *Phil Rev* 75,161-196 Ap 66. As well as the usual distinctions made between remembering how to do something, remembering that something occurred, and remembering an occurrence or object, there is a distinction to be drawn between two different uses of "remember that." Despite these various distinctions, the uses of "remembers" resemble each other in their requirements of past perception and a subsequent representation of what was perceived or gained by perception. The exception is that in remembering how to do something, the requirement in the present may be that what was learned is done again, rather than represented. A careful examination of all that is required of the causal connection brings to the surface the complex and partly theoretical nature of our commonplace notion of remembering.

MARTIN, Charles Burton (ed) and Armstrong, D M (ed). *Locke And Berkeley: A Collection Of Critical Essays.* Garden City NY Anchor 1968.

MARTIN, Charles Burton. *Religious Belief.* Ithaca NY Cornell Univ Pr 1959. Martin believes that "mathematic statements, scientific statements, and moral statements are not themselves in conceptual disorder, though philosophical accounts of them regularly are." In this book he sets out to show that most religious statements (e.g., "God is necessarily good") share this defect. Martin uses linguistic analysis, but his aim is primarily to criticize the content of religious statements, not to discover the logic of religious discourse. Much of his argument depends upon the contention that many assertions are meaningful only if their negation is logically possible and that such assertions cannot be meaningfully transferred from the contingent realm to apply necessarily to God.

MARTIN, Clyde V. The Metaphysical Development Of John Dewey. *Educ Theor* 8,55-58 Ja 58.

MARTIN, Donald A. A Theorem On Hyperhypersimple Sets. *J Sym Log* 28,273-278 D 63.

MARTIN, Donald M. On A Question Of G E Sacks. *J Sym Log* 31,66-69 Mr 66.

MARTIN, F David. *Art And The Religious Experience: The "Language" Of The Sacred.* Lewisburg PA Bucknell Univ Pr 1972.

This is a study of the aesthetic experience of the arts as the principal paths into the depth or religious dimension. The aesthetic and the religious are considered from the point of view of Heidegger's philosophy. Whitehead's theory of perception is used to clarify the detailed operations of the aesthetic experience. Music, painting, literature and architecture are studied with reference to how they not only lure us into participation with the religious dimension but interpret that dimension.

MARTIN, F David. A Note On The Teaching Of Ethics. *Bulletin Of The AAUP* 39 Wint 1953-54.

How can the teacher of ethics integrate the abstract concepts of ethical theories with the everyday experiences of the student? That these two aspects should be synthesized is clear; the implications for ethics if either is omitted, are considered as grounds for this claim. An approach in the teaching of ethics making use of selected novels to achieve this necessary integration is suggested, since literature can present with clarity the complexity of moral issues in a way that ordinary experience cannot. Novels which might be used in connection with particular moral issues are suggested.

MARTIN, F David. Naming Paintings. *Art Journal* 25 Spr 66.

Beginning with a discussion of naming trends within stylistic developments of non-representational painting, this article explores the role that a title should play in the aesthetic experience of a work of art. A problem in the experience of a painting arises when naming referring to a representational subject matter obscures an appreciation of the abstract subject matter. Titles should refer to the subject matter, since the form-content is a unique revelation or informing about the subject matter. This theoretical guideline with respect to naming can aid our experience of not only painting but all works of art.

MARTIN, F David. On Enjoying Decadence. *J Aes Art Crit* 17,441-446 Je 59.

This article is a guide to the appreciation of 16th-century Italian Mannerist painting, a style that is often held to be aesthetically inferior because of its lack of originality. It is claimed that it is helpful to understand Mannerist painting as the realization of the inherent possibilities of High Renaissance forms, which the masters of the classic period did not exhaust. Seen in its relation to the classic forms, Mannerist art need not depict aesthetic decline, but rather contains a kind of reflective summary, a "coda" of High Renaissance painting.

MARTIN, F David. On Portraiture: Some Distinctions. *J Aes Art Crit* 20,61-72 Fall 61. Categories of description for portraiture are offered, such as distinctions between "face," "mask," and "effigy," and idealized and descriptive portraiture. These categories are critical aids that not only can enrich our aesthetic experience, but, they also are devices for critics and historians of art to more accurately distinguish, describe, and classify portraits and the developments in their traditions. Furthermore, they may function as tools of discovery, opening up facets of portraits which otherwise might be missed.

MARTIN, F David. On The Beautiful As Symbolic Of The Holy. *Christian Scholar* 41 Je 58.

It seems that art can symbolize the religious or the holy. How is this accomplished specifically? It is proposed that works of art are adequately described as religious only if they evoke "ultimate concern" as related to the "numinous," the mystery or unrealizability of a work of art. Furthermore, symbols in the work must express man's understanding of the relation of his ultimate concern to the numinous. The interrelationships of these distinctions are discussed with respect to Grünewald's "Crucifixion."

MARTIN, F David. On The Supposed Incompatibility Of Expressionism And Formalism. *J Aes Art Crit* 15,94-99 S 56.

The theory of meaning with respect to pure music, espoused by formalists such as Langer and Pratt, provides a solution for the expressionist problem of explaining how pure music evokes emotion. The generally accepted though inadequate explanation by expressionists, for example, Santayana's "accidental associationalism," can be discarded if the pure arts are conceived as patterns of emotions. On this account, some objective connection between pure form and the response this form evokes in participants can be successfully maintained.

MARTIN, F David. The Artist, Autobiography, And Thomas Wolfe. *Bucknell Review* 2 Mr 55.

This article is an examination of Thomas Wolfe as autobiographer and artist, and the relation between autobiography and art. The development of Wolfe's ability to transform personally important experience into artistically important characters is described, especially as his more mature insights accompanied a de-emphasis of the formal requirements of a novel. The criticism of Wolfe's contemporaries, who often held that he was technically incompetent, is reviewed, with the conclusion that these critics, in being overzealous in their concern with form, often overlooked his artistically objective insight into the hierarchy of the values of his time.

MARTIN, F David. The Imperatives Of Stylistic Development: Psychological And Formal. *Bucknell Review* 11 Mr 63.

This article is a critical review of various theories claiming to explain the process of stylistic development, especially with respect to painting. An imperative, a force which both generates and constrains the creative process, is held by theorists such as Loewy and Riegl to be psychological, and their approach is characterized by an emphasis on supra-individual psychological factors on the creative process. Others, such as Facillon and Wölfflin, insist that the primary controlling force is the artist's "formal inheritance." Consideration is given to the strengths and weaknesses of each of these approaches, particularly when they fail to recognize the imperative of social forces.

MARTIN, F David. The Sociological Imperative Of Stylistic Development. *Bucknell Review* 11 D 63.

This article is an evaluation of theories which claim that societal changes exert forces which are basically responsible for changes in artistic style. The exact connections between social forces, however differently they are conceived by theorists such as Antal and Houser, and the developments of style remain unclear. Attempts to describe these connections in terms of socially determined changes in the artist's state of mind, subject matter, and the relationships of artist to patron are reviewed. It is concluded that the sociological imperative alone is insufficient in explaining stylistic changes. Psychological and formal imperatives must also be recognized as imperatives, not merely conditions, of stylistic development.

MARTIN, F David. Unrealized Possibility In The Aesthetic Experience. *J Phil* 52,393-400 Jl 55.

This article is an examination of the role of "unrealized possibilities" insofar as they arise from the tensions and unexpected resolutions which the participant projects in his appreciation of pure music. Association of these feelings of unfulfilled anticipation with anything external to the music is rejected, and it is argued that unrealized possibilities enrich the aesthetic experience, provided that they remain grounded exclusively in the sensuous "given." Making use of Whitehead's concepts of physical, conceptual, and propositional prehensions, the article concludes that unrealized possibilities are immanent in every artistic form.

MARTIN, James Alfred. *The New Dialogue Between Philosophy And Theology.* NY Seabury Pr 1966.

MARTIN, James Joseph. *Men Against The State; The Expositors Of Individualist Anarchism In America, 1827-1908.* DeKalb IL Allen 1953.

MARTIN, Jane R. Can There Be Universally Applicable Criteria Of Good Teaching? *Harvard Educational Review* 33,484-491 1963.

In "Educational Research: A Criticism," G H Bantock claimed that there can be no universally applicable criteria of what constitutes a good teacher, and that we must consider separately the French teacher, the history teacher, etc. He based his claim on the fact that teaching is a triadic relation. The argument from teaching as a triadic relation is shown here to be invalid and the thesis that there can be no universally applicable criteria of good teaching is shown to be unwarranted.

MARTIN, Jane R. Some Inadequacies In Hardie's Theory Of Knowledge. *Stud Phil Educ* 2,332-339 Wint 63.

MARTIN, John Rupert. The Baroque From The Viewpoint Of The Art Historian. *J Aes Art Crit* 14,164-170 D 55.

MARTIN, Josef. Abfassung, Veröffentlichung Und Überlieferung Von Augustins Schrift *De Doctrina Christiana*. *Traditio* 18,69–88 1962.

MARTIN, Michael. Roscoe Pound's Philosophy Of Law. *Arch Phil Law Soc Phil* 51,37–55 1965.

Three crucial aspects of Roscoe Pound's Philosophy of Law are examined critically: The goal he attributes to a legal system, his philosophy of the history of Law and his theory of judicial interpretation. It is shown that the goal Pound attributes to a legal system is unacceptable from a moral point of view; that his theory of legal history rests on a dubious theory of historical truth, that his theory of judicial interpretation is based on a problematic metaphysics and epistemology.

MARTIN, Michael. The Explanatory Value Of The Unconscious. *Phil Sci* 31,122–132 Ap 64.

It is common knowledge that the notion of the unconscious is an essential part of psychoanalytic theory. In recent years, however, Arthur Pap and A C MacIntyre have argued that Freud's theory of the unconscious is not explanatory. But a close examination of Pap's and MacIntyre's arguments reveals that they are invalid. If one wishes to show that the theory of the unconscious is unexplanatory, different arguments will be necessary.

MARTIN, Michael. The Falsifiability Of Curve-Hypotheses. *Phil Stud* 16,56–60 1965.

Popper has maintained that if it takes N number of points to specify the path of a planet, then it takes N+1 number of observations to refute the corresponding hypothesis. Jerrold Katz has argued that Popper is incorrect and that every curve hypothesis can be refuted by one observation. It is shown that Katz is wrong in his critique of Popper. But it is also shown that Popper is mistaken: the simplicity of a curve hypothesis cannot be explicated in terms of the refutability of the hypothesis.

MARTIN, Michael. Winch On Philosophy, Social Science, And Explanation. *Phil Forum (Boston)* 23,29–41 1965–66.

MARTIN, Oliver. The Problem Of Religious Courses In A State University. *Educ Theor* 3,76–80 Ja 53.

MARTIN, R M. *The Notion Of Analytic Truth*. Philadelphia Univ Of Penn Pr 1959.

This is a clearly written account of Martin's views of analytic truth, containing, in addition to the philosophical considerations, some novel formal results. The formal theory offered is shown to satisfy plausible adequacy conditions, and is notable for economy of assumptions—a reflection of Martin's conviction that semantical metalanguages should, so far as possible, be neutral to issues in ontology.

MARTIN, R M. A Formalization Of Inductive Logic. *J Sym Log* 23,251–256 S 58.

MARTIN, R M. A Homogeneous System For Formal Logic. *J Sym Log* 8,1–23 Mr 43.

MARTIN, R M. A Note On Nominalistic Syntax. *J Sym Log* 14,226–227 Ja 50.

MARTIN, R M and Woodger, J H. Toward An Inscriptional Semantics. *J Sym Log* 16,191–203 S 51.

MARTIN, R M. Does Modal Logic Rest Upon A Mistake? *Phil Stud* 14,8–11 1963.

MARTIN, R M. Of Time And The Null Individual. *J Phil* 62,723–735 D 65.

In this paper the author examines the problem of whether there exists in logic a null individual on an analogy with the null set of set theory. Clearly such an individual is not actual, but its addition to logic has several useful consequences: it allows the calculus of individuals to be a Boolean algebra; also, when a definite description's uniqueness condition fails, it is convenient to make the description designate the null individual; also, the empty domain in the interpretation of quantification could be construed as the domain containing only the null individual, but no actual ones. The author further shows connections between virtual classes and the null individual: the null individual is no more a member of a virtual class than an element of the empty domain, but in some sense it is "in" both.

MARTIN, R M. On 'Analytic'. *Phil Stud* 3,42–47 Ap 52.

MARTIN, R M. On Church's Notion Of Ontological Commitment. *Phil Stud* 11,3–6 1960.

MARTIN, R M. On Connotation And Attribute. *J Phil* 61,711–723 N 64.

This article is a historical-philosophical discussion of two works by N Rescher on the history of Arabic logic. The most interesting essays in the former work are Al-Farabi's discussions of future contingencies and of existence as a predicate, Avicenna's analysis of conditional propositions, and Averroes' extensional analysis of modal propositions. In the first of these essays, Al-Farabi rejects the Stoic interpretation of Aristotle's *De Interpretatione* IX, which restricts the Principle of the Excluded Middle; and in the second essay, Al-Farabi tries to harmonize a number of apparent inconsistencies in Aristotle's logic and metaphysics. The essays of Avicenna and Averroes are interesting for their discussion of temporal quantification. The translation of Al-Farabi's commentary also contains useful historical information. The most interesting part of the commentary is Al-Farabi's treatment of inductive arguments. Rescher's notes are also quite helpful.

MARTIN, R M. On Denotation And Ontic Commitment. *Phil Stud* 13,35–38 1962.

MARTIN, R M. On Inscriptions And Concatenation. *Phil Phenomenol Res* 12,418–421 Mr 52.

MARTIN, R M. On Inscriptions. *Phil Phenomenol Res* 11,535–540 Je 51.

MARTIN, R M. On Semantical Rules And Definable Predicates. *Phil Stud* 10,33–38 1959.

The author suggests a scientific system formulated to contain no primitive individual or functional constants, but only primitive *predicate* constants, each of specified degree. In such a system only the primitive predicates are explicitly interpreted; those introduced by definition are given an interpretation only in a derivative sense, by means perhaps of a kind of secondary or derived semantical rule. The author contends that this is an important point which has been completely neglected in the literature of semantics and perhaps one which is needed to clarify and explicate certain distinctions made by Campbell, Reichenbach, Frank, Northrop, Margenau, and Hutten.

MARTIN, R M. On Tarski's "Semantic Conception Of Truth". *Phil Phenomenol Res* 11,411–412 Mr 51.

MARTIN, R M. On The Berkeley-Russell Theory Of Proper Names. *Phil Phenomenol Res* 13,221–231 D 52.

MARTIN, R M. On The Frege-Church Theory Of Meaning. *Phil Phenomenol Res* 23,605–609 Je 63.

MARTIN, R M. On The Semantics Of Hobbes. *Phil Phenomenol Res* 14,205–211 D 53.

MARTIN, R M. On Theoretical Constructs And Ramsey Constants. *Phil Sci* 33,1–13 Mr 66.

MARTIN, R M. On Truth And Multiple Denotation. *J Sym Log* 18,11–18 Mr 53.

MARTIN, R M. On Virtual Classes And Real Numbers. *J Sym Log* 15,131–134 Je 50.

MARTIN, R M. On Whitehead's Concept Of Abstractive Hierarchies. *Phil Phenomenol Res* 20,374–382 Mr 60.

The purposes here are to examine the text, *Science and the Modern World*, with special emphasis on the chapter: "Abstraction," since it is held that this chapter contains a key to understanding one very important aspect of Whitehead's later cosmology. It is the text for the doctrine of eternal objects. It is maintained that there is close formal affinity between type theory and the analytical character of the realm of eternal objects. Finally, Whitehead was presupposing the type theory as the underlying logic of his later cosmology.

MARTIN, R M. Performance, Purpose, And Permission. *Phil Sci* 30,122–137 Ap 63.

MARTIN, R M. The Principle Of Nominalism. *Phil Stud* 14,33–36 1963.

The article examines recent arguments which have been given to support "the principle of nominalism" and compares these with reasons for and against accepting the principle of extensionality. The author argues that the best evidence in favor of nominalism is that it accords with a certain conception as to "the way the world is," while nothing too serious comes from rejecting it. The evidence in favor of the principle of extensionality is found in its relation to important parts of mathematics. He concludes that, unlike nominalism, rejecting extensionality would be "well-nigh disastrous."

MARTIN, R M. Toward An Extensional Logic Of Belief. *J Phil* 59,169–172 Mr 62.

MARTIN, Richard M (ed) and Anderson, Alan Ross (ed) and Marcus, Ruth Barcan (ed). *The Logical Enterprise*. New Haven Yale Univ Pr 1975.

The paper's range, extending from mathematical logic through ontology, is indicative of both the breadth of Fitch's interests and of his influence on contemporary logical and analytical thought. Part One is on metaphysics and languages. The second part is devoted to combinatorial logic. Part three is on implication and consistency. The final part is devoted to nonstandard logics.

MARTIN, Richard M. *Intension And Decision*. Englewood Cliffs NJ Prentice-Hall 1963.

This study of intensions seeks to keep its ontology as clear and economical as possible by reducing intensions to special kinds of entities already provided for within a many-sorted array of first-order logical systems. The six chapters of the book deal with semantical preliminaries, preference, degree of acceptance, subjective quasi-intensions, intensions and the theory of types, and adequacy, commitment, and meaning.

MARTIN, Richard M. *Logic, Language And Metaphysics*. NY New York Univ Pr 1971.

In the first chapter Martin supports the thesis that the development of proper linguistic forms *dum* semantical theory is a viable possibility for resolving current confusions about the analysis of facts, propositions and events. Chapter II presents an appraisal of Grege's theory of the logic of "thoughts" and Chapter III is a critical discussion of Peirce's theory of sign in its semantical aspects. Chapter IV is a critical survey of some contemporary theories of meaning inclusive of Davidson, Hintikka and Quine. The fifth chapter provides Martin with the foundation for the constructive vein of the rest of the book. Here, he salvages what is useful to him from Reichenbach's "Analysis of Conversational Language." Chapter VI presents a classification of parts of speech and indicates the difficulties of a logistic grammar. In Chapter VII, Martin delineates the outlines of an *event logic* and applies his findings in the last Chapter (VIII) to the analysis of such metaphysical topics as space-time, causal relations and related issues.

MARTIN, Richard Milton. *Belief, Existence, And Meaning*. NY New York Univ Pr 1969.

MARTIN, Richard Milton. *Truth And Denotation: A Study In Semantical Theory*. Chicago Univ Of Chicago Pr 1958.

This book treats the denotational semantics of formal systems and presents a non-translational semantics, i.e., one involving semantical meta-languages in which the object language does not reappear.

MARTIN, Richard M. On Knowing, Believing, Thinking. *J Phil* 59,586–599 O 62.

This paper undertakes to sketch a logic of belief as a step toward a materially correct and theoretically sound analysis of that concept. Definitions of belief and knowledge are given in a metalanguage that is extensional and pragmatic. The demand for extensionality is held to be part and parcel of the very notion of being sound, and an adequate analysis of belief, it is argued, cannot be given merely within a syntax or a semantics. Reference to the person seems essential, and this reference involves us at once in pragmatics.

MARTIN, Richard M. On Peirce's Icons Of Second Intention. *Trans Peirce Soc* 1,71–76 Fall 65.

MARTIN, Richard M. On Woodger's Analysis Of Biological Language. *Rev Metaph* 8,325–333 D 54.

MARTIN, Richard M. The Philosophic Import Of Virtual Classes. *J Phil* 61,377–386 Je 64.

Virtual classes are like real classes in practically all respects except in not being values for variables. Real classes, by definition, are values for variables in some suitable class-theoretic formalism. But virtual classes in their very nature are not and never can be. Hence quantifiers over them are in the strict sense meaningless. Nonetheless most of the effect of having real classes can be achieved equally well in the virtual theory. A virtual class is uniquely determined by its members, but is not regarded as a new kind of entity over and above them.

MARTIN, Robert L (ed). *The Paradox Of The Liar*. New Haven Yale Univ Pr 1970.

MARTIN, Robert Pellow. *Philosophy Versus Corruption: An Ethical Guide To The Good Life*. NY Exposition Pr 1953.

MARTIN, Seymour G and others. *A History Of Philosophy*. NY Crafts 1941.

It is the conviction common to the authors of this commendable enterprise that philosophy is a subject "that must ultimately develop into a theory of evidence." Hence, this history of philosophy is rather a history of epistemology. Its method is to give a very elaborate extract of the principal epistemological writings from Plato to Kant. Only the pre-Socratics, in the most brilliant part of the book, are viewed from a less narrow angle. The post-Kantians have been skipped altogether. The authors readily admit that this is an arbitrary decision. The outstanding quality of the book is the thoroughness with which the scientific concomitants of philosophy are outlined.

MARTIN, Terence. *The Instructed Vision; Scottish Common Sense Philosophy And The Origins Of American Fiction*. Bloomington Indiana Univ Pr 1961.

This book is an exploration of the influence of Scottish Common Sense Philosophy on early nineteenth century American attitudes toward fiction and the imagination. Martin first shows the great appeal of this movement, which became a semi-official philosophy in America. He suggests that it was attractive to Americans because "it stabilized, it was safe, it discouraged undue speculation." In reaction to this stolid philosophic outlook emerged a quest for a free, more dynamic concept of the imagination.

MARTIN, Warren Bryan. Janio Quadros And His Conscience. *Ethics* 73,42–46 O 62.

MARTIN, William Oliver. *The Order And Integration Of Knowledge*. Ann Arbor 1957.

This is a systematic account of: the relation of knowing to being, doing, and making; the relation of types of evidence to types of knowledge; the relation of the sciences to each other and to metaphysics, cosmology, and theology. The analysis culminates in an attempt to state precisely how propositions in the various bodies of knowledge are related to each other either as instrumental or as regulative or as constitutive. These propositions are classified as: historical, metaphysical, theological, formal, logical, mathematical, and generalizations of experimental science. The examination of the relation between natural science and the philosophy of nature is given special elaboration and is related to the distinctions formulated by Aristotle.

MARTLAND, T R. Dewey's Rejection And Acceptance Of A Metaphysic. *Monist* 48,382–391 Jl 64.

One of John Dewey's goals as a philosopher was to rescue his discipline from the epistemological deadlocks centered upon the concept of essence, or as he might have put it, to disengage philosophy from its excessive concern with the fixed and the sure. In order to do this he stressed the contextual aspect of philosophical construction, and, so some claim, undercut belief in the existence of an *priori* realm of essence determining activity. The purpose of this paper is to point out that this was not the case. Dewey recognized the existence of something prior to an experienced context which limited its possibilities. However, this paper also indicates that this something prior to an experienced context is always delineated as an obstructive or constructive antecedent to a particular process of inquiry. As such there is not a metaphysical realm of "ultimate traits" plus the experienced situation, but only structural change.

MARTLAND, Thomas R. *The Metaphysics Of William James And John Dewey: Process And Structure In Philosophy And Religion*. NY Philosophical Lib 1963.

The objective of this imaginative and disciplined work is to show a congruence between religion and philosophy as two activities, both of which attempt to relate all phases of experience.

MARTY, Martin E. *Varieties Of Unbelief*. NY 1964.

The Rauschenbusch Lectures for 1963, at Colgate Rochester Divinity School, discriminate nine types of unbelief. Of most importance to the author is the distinction of "open" and "closed" types, a distinction noted as well among varieties of belief. He is opposed to closed (or "integral") systems, whether of belief (Aquinas, Hegel) or of unbelief (Marx, Nietzsche). There are many brief references to current theological literature.

MASCALL, E L. *Christian Theology And Natural Science: Some Questions On Their Relations*. NY Longmans Green 1956.

MASCALL, E L. *The Importance Of Being Human: Some Aspects Of The Christian Doctrine Of Man*. NY Columbia Univ Pr 1958.

The author acknowledges at the outset that his discussion is from the point of view of a "Catholic theologian of the Anglican allegiance." Part of the aim of the lectures is to reveal to Christian theologians that their divergences on the question of the nature of man are not as great as often supposed. The first lecture on "The Uniqueness of Man" surveys the recent findings of evolutionary biology and concludes that nothing therein need lead Christians to abandon the traditional belief that "man is the uniquely favored creature" of God. In the lecture on "Body and Soul," Mascall argues against both materialism and the Platonic-Cartesian view of man as a "pure spirit" temporarily and unnecessarily inhabiting an uncomfortable material body. In his lecture on "Individual and Society," he concludes that "... it is the contemplation of God in prayer that must be both the source and the end of all human activity in society." The remaining lectures discuss such topics as man's elevation by grace, sin and redemption, and membership in the mystical body of Christ.

MASCALL, E L. *Words And Images: A Study In The Theological Discourse*. NY Longmans Green 1957.

Recognizing that contemporary attacks upon theology question the intelligibility rather than the truth of theological propositions, the author begins with comments upon the discussion between A G N Flew, R M Hare, Basil Mitchell and others in *New Essays In Philosophical Theology*. After pointing out that contemporary objections to theological discourse are far from conclusive, he suggests that problems arising with respect to such discourse are to be resolved by a return to a theory of knowledge which holds that intellection is intuitive as well as merely discursive.

MASLOW, Abraham H. *New Knowledge In Human Values*. NY Harper 1959.

This cooperative volume on the problem of values brings together contributions by fifteen scholars: R S Hartman, H Margenau, J Bronowski (philosophy); D T Suzuki, P Tillich (religion); E Fromm, A H Maslow, G W Allport, K Goldstein (psychology, psychiatry); L von Bertalanffy, T Dobzhansky (biology); P Sorokin (sociology); G Kepes (art); W A Weisskopf (economics); D Lee (anthropology). The general view (with some dissent) appears to be that our recent scientific knowledge of man can contribute to a solution of the contemporary crisis of value and that a "science of value" is possible.

The papers fall mainly into three kinds: "naturalistic," "humanistic," and "ontological," though there is some remarkable convergence of views. Most of the participants adopt an organismic view of human nature and value. They hold that healthy human nature ought to be actualized, especially the positive power of unselfish love.

MASLOW, Abraham H. *Religions, Values, And Peak-Experiences.* Columbus Ohio State Univ Pr 1964.

In this series of lectures, Maslow attempts to seek out a naturalistic and universal basis for the religious enterprise. Maslow identifies what he calls "peak experience" as the "core religious experience" marking out all genuine religiousness apart from "localisms in time and space... (which) are expendable." Using his concept of peak experience derived from both clinical and teaching activity, Maslow differentiates "the two religions of mankind," i.e., the prophets and mystics, who have such experience, and the organizers and legalists, who, by and large, do not have such experience or, more likely, tend to repress it. A second central idea introduced as normative is that of the "self-actualizing person" as the end in view toward which all human activity should aim. Maslow sees a common purpose in education, psychotherapy, government, as well as in religion. The self-actualized person is one who has peak experiences without repression, and this in turn serves to integrate all of one's life interests and behaviors.

MASLOW, Abraham H. *Toward A Psychology Of Being.* Princeton NJ Van Nostrand 1962.

This book claims to bridge the opposing theories of behaviorism and Freudianism and is an essay in "Third Force" psychology: existentialist, phenomenological, organismic and humanistic. Unlike many scientific psychologists, Maslow draws value-implications from his study of human beings and defends a naturalistic theory derived from human nature. He argues for a naturalistic conception of "psychological health," which is very close to "self-actualization." He outlines the quest for self-identity, wholeness, peak experience, and creativity.

MASLOW, Abraham H. *Neurosis As A Failure Of Personal Growth.* *Humanitas* 3,153-170 Fall 67.

MASLOW, Abraham H. *Synergy In The Society And In The Individual.* *Humanitas* 1,161-172 Fall 65.

MASLOW, Alexander. *A Study In Wittgenstein's "Tractatus".* Berkeley Univ Of Calif Pr 1961.

This book explains as simply as possible the basic conceptions in the *Tractatus* and compares them with those of other philosophers, particularly Russell. Wittgenstein is interpreted as being primarily concerned with the conditions of any possible language. It is claimed that the world, as well as our knowledge of it, necessarily involves symbolism. Maslow sometimes criticizes specific points in the *Tractatus*. His most serious objection is that Wittgenstein violates his own principles when he lapses into metaphysics.

MASLOW, Paul. *Intuition Versus Intellect.* Valley Stream NY Life Science Pr 1957. "Genetic memory" still lives within the organism and is expressed in its intuitive reactions to life: in biological growth, society, morals, art, the search for reality, and in every day life. Yet the modern mind seeks to impose the excessive limitations of the intellect upon this psychological inheritance. This leads to a conflict between intuition and intellect and to profound contemporary problems of neurosis. Only by a recognition and acceptance of our genetic endowment (Jung's "collective unconscious") and by an integration of feeling and thinking, according to the author, can human evolution be furthered.

MASLOW, Vera. *Georg Lukács And The Unconscious.* *J Aes Art Crit* 22,465-470 Sum 64.

MASON, Cora Catherine. *Socrates: The Man Who Dared To Ask.* Boston Beacon Pr 1953.

MASON, Henry L. *Toynbee's Approach To World Politics.* New Orleans Tulane Univ 1958.

MASON, Homer. *A Note On Quasi-Dependent Emotive Meaning.* *Phil Stud* 8,92-94 1957.

According to C L Stevenson moral disagreements are not disagreements in belief, but disagreements in attitude. Stevenson contends that his analysis would be established if moral terms had no more than quasi-dependent emotive meaning, a tendency of terms to evoke and express feelings because of their cognitive suggestions. The author argues that there is an inconsistency in Stevenson's position due to Stevenson's assumption that the descriptive suggestions of a moral judgment both are and are not suggested by the judgment.

MASON, Phillips. *The X Of Psychology: An Essay On The Problem Of The Science Of Mind.* Cambridge Harvard Univ Pr 1940.

From a neo-Kantian viewpoint Mr Mason attempts to describe the general nature and structure of truth, the nature of mind or the object of psychology, the relation of mind to truth and of psychology to the other sciences, as well as the content and method of psychology.

MASON, Phillips. *The X Of Psychology: An Essay On The Problem Of The Science Of Mind.* Cambridge Harvard Univ Pr 1940.

This book is not a treatise on psychology, but an attempt to formulate the central problem of psychology in a philosophical, or more specifically in an epistemological, perspective. From an examination of the correspondence, coherence, and intuitive theories of truth the author concludes that truth as a systematic whole consists of "a system of relations based on a nucleus of certain necessary relations or conditions..."

MASTERS, Roger D. *The Political Philosophy Of Rousseau.* Princeton NJ Princeton Univ Pr 1968.

This book is a philosophical commentary on what Rousseau called his 'system'. Part I treats *Emile*, *Second Discourse* and *First Discourse*—an order of reading what Rousseau himself called his "three principal writings" based on the author's own suggestion. Part II analyzes the first draft and final version of the *Social Contract*.

MASTERS, Roger D. "Computer Instruction In Political Philosophy" in *Computer Assisted Instruction In Political Science*, Jonathan Pool (ed). Washington DC 1976. Computers can greatly improve instruction, even in fields like political philosophy where they have rarely been used. Data show that student recall of substantive propositions in philosophic texts is improved—and the frequency of errors reduced—by interactive computer routines done immediately after reading.

MASTERS, Roger D. "The Structure Of Rousseau's Political Thought" in *Hobbes And Rousseau*, Maurice Cranston And Richard S Peters (eds), 401-436. Garden City NY Anchor Books 1972.

Rousseau's political thought rests on a fundamental distinction between "principles of political right" (which define a legitimate political society) and "maxims of politics" (prudential rules guiding political practice). The principles of right include popular "sovereignty" and the "general will" (which Rousseau originally compared to a frictionless surface since it is an unrealizable model of legitimate obedience). The maxims of art, or "science of the legislator," consist of empirical propositions, and demonstrate why any existing society will necessarily fall more or less short of the ideal.

MASTERS, Roger D. *Genes, Language, And Evolution.* *Semiotica* 2,295-320 1970. The decisive role of language for the human species is demonstrated to rest on similarities in the structure, functioning, and evolution of human languages and genes.

MASTERS, Roger D. *Politics As A Biological Phenomenon.* *Social Science Information* 14,7-63 1975.

Aristotle describes our species as the "zoon politikon"—the political animal. A careful survey of contemporary biology shows the complexity of the integration of genetically inherited, culturally transmitted, and individually learned components in human behavior. Societies of *Homo sapiens* differ from other species precisely because this complexity gives rise to the need of regulation of potential conflicts. Hence contemporary scientific evidence demonstrates the truth of Aristotle's conception of the "political animal."

MASTERS, Roger D. *The Lockean Tradition In American Foreign Policy.* *Journal Of Internatl Affairs* 21,253-277 1967.

Locke's doctrine of the state of nature and the social contract is shown to have formed, in a very fundamental way, American attitudes toward foreign policy. This influence was doubtlessly reinforced by the remarkable parallel between Locke's doctrines and American experience.

MATCHETTE, Franklin J. *Outline Of A Metaphysics; The Absolute-relative Theory.* NY Philosophical Lib 1949.

MATCZAK, Sebastian A. *Karl Barth On God, The Knowledge Of The Divine Existence.* NY St Paul 1962.

Sebastian Matczak, examines the philosophical and theological assumptions of Karl Barth, the dominant figure in contemporary Protestant thought. Matczak looks at Barth within the context of the ongoing Protestant-Roman Catholic "dialogue" in the United States. Matczak concerns himself primarily with Barth's formulation of our knowledge of the existence of God. Limiting himself to an explication of Barth's *Dogmatik II-I*, the author divides his discussion in the following manner: Part I, Barth's Constructive Doctrine of the Existence of God; Part II, Barth's Arguments Against the Traditional Position; Part III, The Significance of Barth's Position. Matczak does not accept Barth's formulation of the knowledge of God; for Barth does not accept the Thomistic conception of analogy, the ability of the mind to reach the existence of God, and the positive role creation plays in man's knowledge of God.

MATCZAK, Sebastian A. *A Select And Classified Bibliography Of David Hume.* *Mod Sch* 42,70-81 N 64.

MATEJKA, Ladislav (ed) and Titunik, Irwin R (ed). *Semiotics Of Art: Prague School Contributions*. Cambridge MA MIT Pr 1976.

The editors have brought together twenty-one representative papers. The selections are divided into five parts: (I) the programmatic paper on aesthetic semiotics; (II) Bogatyrev's four studies on the semiotic analysis of folklore, multifunctional structures and hierarchical transformations; (III) studies of sign systems as pertaining to the theater and cinema; (IV) the influential articles on the semiotic analysis of verbal art and its aesthetic function dealing with literary works, the evolution of literary systems and their interrelations with other systems of linguistic use; (V) two papers on the theoretical problems of the visual arts and the structure of semiotic systems in painting.

MATHUR, D C. *Naturalistic Philosophies Of Experience*. St Louis Green 1971.

Considering works of William James, John Dewey and Marvin Farber in contrast to the transcendental phenomenology of Edmund Husserl, this study seeks to ground a naturalistic phenomenology of experience and knowledge.

MATHUR, D C. A Note On The Concept Of "Consummatory Experience" In Dewey's Aesthetics. *J Phil* 63,225-231 Ap 66.

The thesis of this paper is that an adequate understanding of Dewey's Concepts of "an experience" and "consummatory experience" requires a prior grasp of his notion of "pervasive quality" which he developed in his essay on "Qualitative Thought" published in his book *Philosophy and Civilization* in 1931. He rejects the "ivory tower" view of art and believes that every genuine experience has an aesthetic phase. The so-called "aesthetic experience" in the arts is only a conscious and deliberate development of that phase. The whole process of artistic creation or appreciation is controlled and guided by the initial individualizing pervasive quality—supplemented by the perception of qualities of the intermediate stages. Dewey has emphasized the role of conflict within the integrating pervasive quality as that of clarifying, intensifying and heightening the qualitative feel of things. His concept of "an experience," however, mixes descriptive and normative elements, giving rise to misinterpretations of his theory.

MATHUR, G B. Hume And Kant In Their Relation To The Pragmatic Movement. *J Hist Ideas* 16,198-208 Ap 55.

MATSON, Floyd W. *The Broken Image: Man, Science And Society*. NY Braziller 1964.

Hypnotized by Newton's mechanistic model of nature, psychology and social science uncritically transferred that model to man and society, with the tragic result that man's former image of himself as an integrated entity—more than a mere machine—was shattered and lost. Today, however, with the new revolution in physics and the emergence of a new perspective resting on uncertainty and complementarity, "the recovery of an integrated vision" seems possible. These two themes, the shattering and possible repair of man's image of himself, are the burden of the two parts of this book, "The Great Machine" and "Humanization—from Physics to Politics." The work is thus a report on the encounter between the "two cultures," with emphasis on the need of science to become alert to the values of humanity.

MATSON, Floyd W. *The Idea Of Man*. NY Dell 1976.

Anti-humanistic trends in the conception of man, although widely held in modern times, are here portrayed as constituting "a nightmare of intellectual darkness from which we should be trying to awake." Countering these nay-saying trends, according to the latter part of the book, are such constructive developments as the American ideology of equal, inalienable rights; the anti-technocratic humanism of Lewis Mumford and others; the outlook of the "engaged" historians and sociologists, such as Arthur Schlesinger, Jr., and C Wright Mills; and the humanistic psychology of Abraham Maslow and his colleagues. The conclusion is reached that man is free to choose between the mechanical and the creative views of his own historical future.

MATSON, W I. Cornford On The Birth Of Metaphysics. *Rev Metaph* 8,443-454 Mr 55.

This is a review article on Cornford's *Principium Sapientiae*, maintaining contrary to the author that pre-socratic philosophy embodies a conscious opposition to a religious world view.

MATSON, W I. Isocrates The Pragmatist. *Rev Metaph* 10,423-427 Mr 57.

MATSON, W I. Kant As Casuist. *J Phil* 51,855-859 D 54.

The ethical intuitionist is right in claiming that obligation must be knowable independently of moral theory, but an a priori theory of the Kantian type is not thereby shot down. Kant gave needless fuel to his critics in his examples of the wrongness of suicide and the rightness of telling the truth to a homicidal maniac, neither of which in reality follows from his theory.

MATSON, W I. Morality Pills. *Ethics* 72,132-136 Ja 62.

If we could put some drug into the water supply that would make everybody moral, would it be a good thing? No, because that would only be a substitute for indoctrination; whereas real moral values must be based on reason.

MATSON, W I. Philosophical Explication In Political Science. *J Phil* 48,513-517 Ag 51.

This article is a sketch of an attempt to define State, and other concepts of political science, in terms of relations of compulsion. It is shown that no state can be literally based on physical force.

MATSON, W I. The Naturalism Of Anaximander. *Rev Metaph* 6,387-396 Mr 53.

I argue, in opposition to George F Burch, that Anaximander was not a metaphysician but a natural scientist, and a very great one.

MATSON, Wallace I. *A History Of Philosophy*. NY American Book 1968.

This book is a narrative history from Thales to J L Austin, attempting to show how the development of philosophical doctrines has proceeded according to a (rather loose) logic of its own. The most innovative section is on the Pre-Socratics. It is maintained that inside-out (going from data of consciousness to the world) versus outside-in (taking the world as given and inferring the nature of the mind) is a more fruitful classification of philosophers than materialist/idealist or empiricist/rationalist.

MATSON, Wallace I. "Why Isn't The Mind-Body Problem Ancient" in *Mind, Matter And Method*, Paul K Feyerabend And Grover Maxwell (eds), 92-102. Minneapolis 1966.

Although the Greeks distinguished between mind and body, they drew the line between the "mental" and "physical" so that the processes of sense perception fell on the body side. For this reason they could not raise the question "How are sensations, raw feels, related to bodily processes?" Thus they avoided the confusions that generate the mind-body problem.

MATSON, Wallace I. Bliks, Prayers, And Witches. *Phil Forum (Pacific)* 5,2-48 D 66.

Religion is not capable of absorbing certain sorts of scientific and philosophical sophistication; sceptics are right when they consider these to be destructive of it. Three tactics are discussed by which believers mistakenly try to beat the sceptics by joining them: first, the attempt to represent religion not as a set of beliefs which are liable to refutation, but as a set of stances or attitudes or "bliks"; second, the abandonment of a petitionary view of prayer; third, the abandonment of vulgar belief in magic.

MATSON, Wallace. *The Existence Of God*. Ithaca NY Cornell Univ Pr 1965.

This book is a scrutiny of the important arguments that have been urged in support of belief in the existence of God or against it. The conclusion is that no argument for the existence of God is conclusive, but the existence of evil rules out the existence of a God at once omniscient, omnipotent and benevolent.

MATSUNAGA, Alicia. *The Buddhist Philosophy Of Assimilation: The Historical Development Of The Bonji-Suyaku Theory*. Rutland VT Tuttle 1969.

MATTESON, Robert S. Arthur Machen: A Vision Of An Enchanted Land. *Personalist* 46,253-268 Spr-Apr 65.

MATTHEWS, Gareth B. Aquinas On Saying That God Doesn't Exist. *Monist* 47,472-477 Spr 63.

The article discusses inadequacies in Aquinas' criticism of Anselm's ontological argument. Aquinas is commonly credited with criticizing Anselm by distinguishing two kinds of self-evidence, a distinction which for the purpose of criticizing Anselm, is not very helpful, and instead of an effective rebuttal of Anselm, Aquinas provides mostly a mere denial that his argument is cogent. The article attempts to show how Anselm's ontological argument can be defeated.

MATTHEWS, Gareth B. Augustine On Speaking From Memory. *Amer Phil Quart* 2,157-160 Ap 65.

In *De Magistro* 12.39 Augustine makes the paradoxical claim that whenever we are asked about familiar, but absent, sensible things we respond by changing the subject, i.e., by talking of our memory images instead. He seems to have been led to say this through preoccupation with the supposed mental mechanism of question answering to the neglect of the logic of enquiry. This he asks, in effect, "What mental mechanism makes it possible for us to speak of things from memory?" But he neglects to ask, "What makes an utterance count as a statement about some absent thing (rather than as a report on mental imagery)?"

MATTHEWS, Gareth B. Ockham's Supposition Theory And Modern Logic. *Phil Rev* 73,91-99 Ja 64.

Philotheus Boehner's *Medieval Logic* gives the impression that medieval supposition theory and modern quantification theory agree on their interpretation of particular propositions but differ on their interpretation of universal propositions. Matthews shows that this impression is mistaken: they differ on both particular and universal

- propositions, and the basic reason is that the medievals quantify over terms while modern logicians quantify over variables.
- MATTHEWS, Gareth B.** On Conceivability In Anselm And Malcolm. *Phil Rev* 70,110-111 Ja 61.
- MATTHEWS, Gareth B.** Peter Geach On Saying Things In One's Heart. *Phil Rev* 71,380-382 Jl 62.
- MATTHEWS, Gareth B.** Theology And Natural Theology. *J Phil* 61,99-108 Ja 64. How important is natural theology to theology generally? According to a thesis here named "Theological Nonnaturalism," natural theology can neither confirm nor disconfirm the truths of divine revelation. On the other hand, a view that enjoys widespread contemporary approval holds that theological assertions are meaningful only if open to confirmation or disconfirmation by natural theology and therefore that it must be natural theology that gives theological doctrines the meaning they are thought to have. Certain arguments for this conclusion are examined, but it is shown how a theological nonnaturalist could challenge each.

- MAVRODES, George I.** Real And More Real. *Int Phil Quart* 4,554-561 D 64. Theologians and metaphysicians sometimes say that some things are more real than others. In the paper I examine the logic of the term "real" to determine whether it allows of a comparative sense, and whether any further elucidation of that sense can be given. I distinguish, and set aside, the sense of "real" in which the real differs from the unreal by virtue of some ordinary property. I then concentrate on that sense in which the real is the existent, and the unreal is the non-existent, fictional, etc. An examination of this sense shows that, in common non-philosophical contexts, "real" is often used in a manner which is logically equivalent to a comparative use. This use depends upon a relation of existential dependence between the entities involved. Therefore, this comparative use of "real" is both meaningful and appropriate in metaphysical and theological discussions.

- MAXWELL, G (ed)** and Feigl, Herbert (ed). *Scientific Explanation, Space And Time*. Minneapolis Univ Of Minn Pr 1962.
- MAXWELL, Grover (ed)** and Feigl, Herbert (ed). *Current Issues In The Philosophy Of Science, Symposia Of Scientists And Philosophers*. NY 1961. This volume includes almost all the prepared essays, comments, and rejoinders then presented, in some cases revised and expanded. The participants are "philosophically oriented scientists" or "scientifically trained philosophers." The main topics are "Theory Construction in Logical and Historical Perspective," "Empirical and Conventional Elements in Physical Theory," "Induction, Probability, and Simplicity," "The Logic of Variables and Constants," "Philosophical Issues of Quantum Theory," "Methodological Problems of Psychology and the Social Sciences."
- MAXWELL, Grover (ed)** and Feigl, Herbert (ed). *Scientific Explanation, Space, And Time*. Minneapolis 1962. This volume is the product of intensive discussions held at the Minnesota Center for the Philosophy of Science. It concentrates upon the philosophy of physics; though some of the articles are relevant to psychology and history.
- MAXWELL, Grover (ed)** and Feigl, Herbert (ed) and Scriven, Michael (ed). *Concepts, Theories, And The Mind-body Problem*. Minneapolis MN Univ Of Minn Pr 1958.

- MAXWELL, Grover (ed)** and Feyerabend, Paul K (ed). *Mind, Matter, And Method*. Minneapolis 1966. This *Festschrift* for Herbert Feigl contains essays by philosophers, psychologists, psychoanalysts, and physicists. The first ten essays concern philosophy of mind, with special emphasis on the mind-body problem. The second group of eleven essays deal with philosophical method, with special emphasis on introduction and confirmation. The third group of five essays concerns the philosophy of the physical sciences.
- MAXWELL, Grover.** An 'Analytic' Vindication Of Induction. *Phil Stud* 12,43-45 1961. The author attempts a vindication of induction based, in part, upon the view that it is necessarily true that the future will to some extent resemble the past. He argues that to ask whether any inductions concerning the future will be successful logically presupposes that some past regularities will continue to hold. He concludes that any attempt to impugn the status of induction is self-defeating, since such an attempt presupposes that induction is vindicated.
- MAXWELL, Grover** and Feigl, Herbert. Why Ordinary Language Needs Reforming. *J Phil* 58,488-497 Ag 61. The authors contend that ordinary language needs reforming for three reasons: (1) there is the need to abstract and systematize, (2) mere examination of ordinary use will not reveal rules of analysis, and (3) implicit rules that are present in ordinary language may indirectly reflect beliefs which are false. They claim that ordinary language is often the first word in any philosophical investigation, but that the philosopher will then begin to reform ordinary language.

- MAYER, Frederick.** *Man, Morals, And Education*. New Haven 1962.
- MAYER, Frederick.** *New Directions For The American University*. Washington DC Public Affairs Pr 1957. Mayer attempts to ascertain the future of American education. His diagnoses and prognoses are contained in five chapters: "The Goals of Education," "The Challenge of Education," "The Teacher," "The Obstacles," and "Toward Creative Education." He asserts that the goals of education depend upon "prior philosophical assumptions." Confusion in education is due in part to the lack of discerning the main purpose of education as intellectual rather than vocational or technical.
- MAYER, Frederick.** *New Perspectives For Education*. Washington DC Public Affairs Pr 1962.
- MAYER, Frederick.** *Philosophy Of Education For Our Time*. NY Odyssey Pr 1958. This work is addressed to philosophers and educators and to thoughtful readers with some concern for the conditions of American society. A case is made for a fundamental role of philosophy in education. The "new" philosophy lays stress upon the continuing vitality of the American "tradition" represented by Jefferson, Emerson, and John Dewey. The author also takes into account some contemporary tendencies in general philosophy such as existentialism and logical empiricism. In this sketch or "outline" are pointed criticisms of both the philosophers and the educators of today.
- MAYER, Frederick** and Brower, Frank E. *Education For Maturity*. Washington DC Public Affairs Pr 1956. The authors of *Patterns of a New Philosophy* discuss "what is really fundamental in education," affirming their belief in the limitless "potentialities of man," in peace as "the greatest good of mankind," and in the ultimate victory of "civilization and democracy."
- MAYER, Frederick** and Brower, Frank E. *Patterns Of A New Philosophy*. Washington DC Public Affairs Pr 1955. The "new system of philosophy" to which this is an introduction in terms of the contemporary world resembles that of Santayana in being sceptical about metaphysics, naturalistic in foundation, and conceived like poetry in quest of insight and vision. Unlike Santayana, however, the authors are optimistic about the prospects of Western democracy.

MAYEROFF, Milton. *On Caring*. NY Harper & Row 1971.

MAYEROFF, Milton. A Neglected Aspect Of Experience In Dewey's Philosophy. *J Phil* 60,146-152 Mr 63.

The purpose of this paper is to suggest an important aspect of experience which receives virtually no attention in Dewey's writings and which would have to be considered in working out a more inclusive analysis of experience. The experiences in question may be suggested negatively by saying that they are characterized by lack of purpose, doing and manipulating, sharing, and the immediately practical and social. What important consequences would follow for Dewey's philosophy if these experiences were taken seriously? First, the conception of man as the problem-solving animal would have to be reconsidered (since it is unduly narrow). Perhaps, also, a broader view of experience would result in a somewhat different conception of the nature of philosophy.

MAYEROFF, Milton. *On Caring*. *Int Phil Quart* 5,462-474 S 65.

Caring, in the most significant sense, is to help the other to grow and realize itself. The other may be a person, a "brain child," a community, etc. Concepts such as identity-in-difference, devotion, growth, trust, humility, patience, hope, freedom, and responsibility are used to make caring intelligible. In the context of a man's life, caring has a way of ordering his other activities around itself. When a man's carings are comprehensive enough to fruitfully order all spheres of his life around them, he is in place in the world. In place contrasts with being "out of place" and insensitivity to any sense of place. The natural expression of being in place is gratitude.

MAYS, W. *The Philosophy Of Whitehead*. NY Macmillan 1959.

This book is primarily a commentary on some of the more important aspects of *Process and Reality*, but is supplemented by a study of other of Whitehead's works in cases where his ideas are developed more fully there. It claims that there is a greater uniformity between Whitehead's earlier and later work than has usually been assumed and seeks to find the clue to the understanding of him in his mathematical logic and in the concepts of modern physics. The two key notions of Whitehead's later philosophy are held to be the postulational method of modern logic with its emphasis on complex relational systems and the field-theory of modern physics with its emphasis on the historicity of physical systems.

MC ADAM, James I. Rousseau And The Friends Of Despotism. *Ethics* 74,34-43 O 63.

This essay explores Rousseau's relationship to Grotius, Hobbes, and Pufendorf, asks what Rousseau means in calling them "friends of despotism," and finally considers whether Rousseau himself is a supporter of despotism, as Benjamin Constant charges. Rousseau considers anyone a supporter of despotism who allows any individual to give up his sovereign rights to another man, whether that man be a king or representative. Only the law must be above men. By "despotism," however, Constant means freedom from political power, whereas Rousseau means freedom for political power. Thus according to Constant, Rousseau is a "friend of despotism."

MC BRIDE, William Leon. *Fundamental Change In Law And Society: Hart And Sartre On Revolution.* NY Humanities Pr 1970.

MC BRIDE, William Leon. "Individualisms" in *Patterns Of The Life-World*, James M Edie, Francis H Parker, And Calvin O Schrag (eds), 201-227. Evanston IL 1970.

Is individualism a justly dying phenomenon, as Marxists of the Althusserian stripe would maintain? Or is the concept, rather, essential to the battle for human freedom against depersonalization? I distinguish three senses of individualism: a descriptive and normative theory, a method, and a general value determination that the individual is to be treated as of primary importance for social philosophy. I reject the first sense, of which Locke's atomism is paradigmatic. I rehearse some difficulties, exemplified by Descartes and Husserl, in taking the human individual as one's methodological starting-point. And I defend the third sense, in common (as I believe) with John Wild, against objections.

MC BRIDE, William Leon. "Jean-Paul Sartre: Man, Freedom And Praxis" in *Existential Philosophers*, George A Schrader, Jr (ed), 261-329. NY McGraw-Hill 1967.

The article attempts to summarize the main lines of Sartre's philosophical thought, particularly as it is to be found in *Being and Nothingness* and the *Critique of Dialectical Reason*. A considerable continuity between Sartre's earlier and later work is demonstrated. Questions are raised about truth-claims in Sartre's ontology and ultimately about the status and meaning of his ontological building-blocks, being in-itself and for-itself, or inert matter and praxis. A section is devoted to Sartre's views about ethics, and a final section deals with the relationship between Sartre's personal activities, especially his political commitments, and his philosophy.

MC BRIDE, William Leon. "Law Unlimited: An Overview Of Future Possibilities" in *The Limits Of Law*, J Roland Pennock And John W Chapman (eds), 28-38. NY Lieber/Atherton 1974.

Taking an essay by David Danelski as my departure point, I provisionally accept his distinction between empirical and normative limits of law. I point to the possible future expansion of law's empirical limits through technology; nearly unlimited social control will become feasible. We should therefore be skeptical about increasing the sense of obligation to obey the law as such. As to whether law's scope ought to be expanded (the normative question), that depends. Law is sometimes preferable to other, more "effective" methods, such as vigilantism, but in the long run a narrowing of the limits of law as we know it, particularly of its coercive aspects, is desirable.

MC BRIDE, William Leon. "Noncoercive Society: Some Doubts, Leninist And Contemporary" in *Coercion*, J Roland Pennock And John W Chapman (eds), 178-197. NY Aldine-Atherton 1972.

Lenin's assumed Marxist commitment to a future noncoercive society is undermined by his emphasis on achieving a higher phase of communism through habituation, which I take to be internalized coercion. I show that commitment to the goal of noncoercive society is not as widespread as one might think, but I argue that small-scale, temporary instances of its realization are to be found. For a society to be noncoercive, it is not enough that its members merely all accept its rules; in addition, relationships of dominance and subordination must be minimized, since otherwise rules perpetuating such relationships may exist and be acquiesced in by mystified, habituated subordinates.

MC BRIDE, William Leon. "Sartre And The Phenomenology Of Social Violence" in *New Essays In Phenomenology*, James M Edie (ed), 290-313. Chicago Quadrangle 1969.

I begin by summarizing the pervasive role of violence in Sartre's account of social activity in his *Critique of Dialectical Reason*. Violence is based in material scarcity and appears as the Janus-faced phenomenon of fraternity-terror in institutionalized groups. In contrast with his earlier thought, Sartre now admits the possibility of a violence-free future world different from ours. I praise Sartre's insistence on discovering human meaning, rather than merely natural causalities like those found in storms, in even the most violent social upheavals. I find his notion of scarcity inadequate but his treatment of the ethical significance of violence balanced and valuable.

MC BRIDE, William Leon. "Towards A Phenomenology Of International Justice" in *Law, Reason, And Justice: Essays In Legal Philosophy*, Graham Hughes (ed), 137-167. NY New York Univ Pr 1969.

The "Platonistic" conception of justice as an eternal form exerts a baneful influence on legal philosophy. More promising is Norberto Bobbio's passing suggestion that a phenomenology of justice be developed. But serious difficulties emerge if we attempt to employ Husserl's phenomenology, with its idealistic tendencies, or Schultz's version, with its overemphasis on "common sense," to this enterprise. Historically, the idea of justice has been intertwined with legal notions. Taking my cue from this, I indicate some ways in which existing practices of international law, particularly the law of warfare, might be employed to generate an empirically-based phenomenology of international justice.

MC BRIDE, William Leon. "Voluntary Association" in *Voluntary Associations*, J Roland Pennock And John W Chapman (eds), 202-232. NY Atherton Pr 1969.

Voluntary associations, I argue, are considered ideal social forms because of the ideality of the principle of voluntary association. This principle should not be endorsed because it allegedly conduces, as some have claimed, to maximizing unanimity or rationality or wish-fulfillment, but because it promotes the value of individual responsibility. Paradoxically, joint activities are often required to further this goal, and some coercion may be involved. An entire society organized as a voluntary association, in the sense delineated here, is conceivable; but contemporary American "democratic," "pluralistic" society, I contend against its panegyrists, drastically fails to meet this ideal.

MC BRIDE, William Leon. *Marxism And Natural Law.* *Amer J Of Jurisprudence* 15,127-153 1970.

Although d'Entreves sees Hegel as breaking decisively with natural law thinking,

Hegel's attack on Hugo's legal positivism should be recalled. The young Marx concurred in rejecting Hugo, while his anti-Hegelian "naturalism" is more congenial to the natural law tradition than is Hegel's philosophy. This congeniality is better understood by analyzing Marx's affinities, both earlier and in "Capital," with Aristotle. Aristotle's condemnation of "acquisitiveness," for instance, anticipates Marx's critique of capitalism in a crucial way; Marx himself calls attention to this. Finally, I sketch a concept of natural law as historically changeable that might usefully complement a concrete Marxian social analysis.

MC BRIDE, William Leon. *The Acceptance Of A Legal System.* *Monist* 49,377-396 JI 65.

This notion of acceptance is taken from Hart's *Concept of Law*, where, I show, it serves to reinstate the long-suppressed distinction between validity and effectiveness. Hart, however, has not explored the notion sufficiently. "Acceptance" may mean a long-term dispositional attitude, or a single act of choice, or something in between. A factual and a normative question arise: (a) What sort of acceptance characterizes modern legal systems? (b) What attitude is desirable among officials and subjects of such systems? I show that acceptance even among a highly passive citizenry could not conform to a legal theory of extreme behaviorism, and, paradoxically, that it is undesirable to encourage either total passivity or maximum choosing by subjects. This result is explicable, I maintain, if we question the alleged autonomy of legal systems, especially in the light of revolutionary situations, and reaffirm law's ultimate dependence on the broadly moral phenomena of responsibility and choice.

MC BRIDE, William Leon. *The Essential Role Of Models And Analogies In The Philosophy Of Law.* *New York Univ Law Review* 43,53-87 Mr 68.

First, the contributions of Wisdom, Macdonald, Weldon, Hart, and John Austin (the jurist) to understanding the importance of models, metaphors, and similar devices in philosophical and legal thinking are discussed. Second, the influence of a mathematical or logical model on Kelsen's philosophy is demonstrated; the writings of three post-Kelsenians—Sander, Merkl, and Laserson—dramatize this. Third, the significance of the "rules" and "games" model in Hart's thought is analyzed. Finally, I mention that all-encompassing models underlie such earlier legal theories as Aquinas' and Hegel's and conclude that judicious use of some such devices is unavoidable for fruitful explanation.

The "block" universe is one in which nothing ever comes to be or passes away, but in which events are spread out in three dimensions of space and one of time. Temporal passage is a subjective phenomenon only. This metaphysical theory implies the "timeless" theory of truth, by which any (tenseless) proposition about the future, if true at any time, is true at all times. Opposed to the timeless theory of truth is the "temporal" theory, by which certain propositions about the future are now neither true nor false. This theory involves rejecting the law of bivalence, though not the law of the excluded middle, and (it is argued) is both supported by intuition and capable of precise and rigorous exposition. But if the timeless theory is rejected, then the block universe goes too, and the way lies open for the metaphysical reinstatement of temporal flux, and the asymmetry of past and future.

MC CLENDON JR, James William and Smith, James M. *Understanding Religious Convictions*. Notre Dame Notre Dame Univ Pr 1975.

This book is a written study of the structure and meaning of religious convictions. The authors using recent language theory, e.g., Austin, provide a useful discussion of a "speech act theory of religion." Making much of the idea of "convictional community," they opt for the development of theology as the "Science of convictions," a sub-discipline of "theoretics" as the "investigation of shared convictional communities," e.g., political or ideological. It contains extensive footnotes drawn from classical and recent literature in linguistic analysis and philosophy of religion.

MC CLINTOCK, Robert. *Man And His Circumstances: Ortega As Educator*. NY 1971.

This is a study of J Ortega y Gasset as civic educator in the context of his ontological conception of "historic" reason. The author has shown Ortega as civic educator, especially in the light of his much misunderstood *Revolt of the Masses*.

MC CLINTOCK, Thomas L. The Argument For Ethical Relativism From The Diversity Of Morals. *Monist* 47,528–544 Sum 63.

The author argues that ethical relativism is a form of ethical skepticism. After examining the nature of ethical statements and showing how statements of descriptive ethics reporting their data differ from the statements they report, he concludes that while the only argument ever given for ethical relativism is based on the diversity of moral principles, the diversity of morals cannot in fact—either inductively or deductively—establish ethical relativism. Thus most of the data gathered to demonstrate ethical relativism are not even relevant to raising the problem, let alone to resolving it.

MC CLOSKEY, H J. A Difficulty For Some Nonobjectivist Metaethics. *Phil Stud* 14,81 1963.

MC CLOSKEY, H J. An Examination Of Restricted Utilitarianism. *Phil Rev* 66,466–485 O 57.

MC CLOSKEY, H J. D-Words, A-Words, And G-Words. *Phil Stud* 16,21–30 1965. P H Nowell-Smith in analyzing moral language suggests that so-called "value-words" play many different parts and that only an examination of context can determine the function of a word in any given usage. Specifically, he refers to words like "amusing" as A-words (*aptness*) and words like "worth-seeing" as G-words (*gerundive*). Nowell-Smith further argues that so-called D-words such as "beautiful," "ugly," and "foulness" can be seen to collapse into A-words. The author argues that "good" and "ought" in their moral uses cannot satisfactorily be accounted for in terms of A and G words. He states that there is no evident paradox in speaking of an uninhabited world having beautiful and sublime views, arguing that Nowell-Smith's contextual implications don't always hold.

MC CLOSKEY, H J. Some Concepts Of Cause. *Rev Metaph* 17,586–607 Je 64.

The author examines ordinary usage in order to discern significant features of nonphilosophical talk about causes and so to distinguish and elucidate concepts which, taken together, comprise the everyday concept of cause. He finds that many concepts of partial cause, including those suggested by the expressions agency, force, and catalyst, must be distinguished, and he argues that these concepts do not admit of explanation in terms of a single, more basic concept. In particular, he contends

that accounts in terms of regularity, invariable succession, manipulations and recipes are inadequate.

MC CLOSKEY, H J. The Philosophy Of Linguistic Analysis And The Problem Of Universals. *Phil Phenomenol Res* 24,329–338 Mr 64.

It is argued that linguistic analysis does not deal with the problem of universals in a satisfactory way. The contributions of Ryle, Wittgenstein and Pears are considered. It is held that the problem of universals is a genuine metaphysical problem and does not admit of being disposed of by conceptual analysis. Moreover, the failure of attempts by linguistic analysts here must cast doubt on the soundness of their bold antimetaphysical claims. It is concluded that the problem of universals is not primarily one of naming, but rather of resemblances.

MC CLOSKEY, H J. The Problem Of Liberalism. *Rev Metaph* 19,248–275 D 65.

The author's purpose is to formulate a coherent, realistic liberal theory of the function of the state. To this end, he examines the minimum function theory outlined by Humboldt and Spencer and the qualified interventionist theories developed by Mill and Hobhouse. Difficulties arising in the minimum function theory, where freedom is the sole and absolute good, have led to internally inconsistent interventionist theories arbitrarily recognizing goods other than freedom. In closing the author advances his own position, namely, that each case of state interference must be judged on its merits in terms of goods to be secured or evils prevented.

MC CLOSKEY, H J. The State And Evil. *Ethics* 69,182–195 Ap 59.

MC CLOSKEY, H J. The State As An Organism, As A Person, And As An End In Itself. *Phil Rev* 72,306–326 Jl 63.

McCloskey clarifies some of the issues involved in the claims that the state is an organism, a person, or an end in itself. He considers the claim that if the state is an organism it is ontologically higher than its parts, and finds it true only in a trivial sense. We must be careful not to confuse the claim that the state is an organism with the claims that: the state is a person; the state is more valuable than its parts or its parts derive their value only from the whole; the state cannot be a means to an end. Even if the state is a person, he argues, that does not give it a special status among persons. Last, he examines the claim that the state is an end in itself and finds it either without meaning or patently absurd.

MC CLOSKEY, H J. Toward An Objectivist Ethic. *Ethics* 73,10–27 O 62.

MC CLOSKEY, H J. Would Any Being Merit Worship? *S J Phil* 2,157–164 Wint 64.

MC CLURE, Elizabeth. Dante's Humanism. *Personalist* 29,273–286 Sum–Jl 48.

MC CLURE, George. Academic Freedom And Self-Hatred Among Intellectuals. *Educ Theor* 13,44–46 Ja 63.

In this piece I use the sociological theory of Melvin Seaman to argue that imputing to oneself and one's group (here, intellectuals) the stereotypes held by the majority can occur with hurtful effects to intellectuals. The chief consequence of this is that intellectuals may themselves punish their colleagues for behavior the majority stereotypes denigrate, even though that behavior should receive support on grounds of intellectual freedom, etc. Thus, public taking of unpopular stands is deplored, not because it is believed by intellectuals to be improper, but because, "in this case," it is likely to give the whole group—campus or community—a bad name.

MC CLURE, George and Tyler, Forrest. Policy Decisions In Science. *Journal Of General Psychology* 77 1967.

Two kinds of arguments are used to defend the thesis that value judgments and judgments of fact are inseparably intertwined, and interdependent: One drawn from psychology, shows the interdependence of discrimination and preference: experimental animals cannot exhibit a preference without also exhibiting a discrimination, and vice versa. At the level of sophisticated scientific study, the second argument shows that value judgments are requisite in the course of ordinary experimentation, physical or social. Based on this thesis, the further claim is made that value-fact investigations are spiral, or dialectical, and that no circularity is involved in the spiral, but that, on the contrary, more adequate research can now be done on both facts and values.

MC CLURE, George and Tyler, Forrest. Role Of Value In The Study Of Values. *Journal Of General Psychology* 77,217–235 1967.

After a survey of a large number of empirical value studies, we conclude that all such studies are flawed by their failure to realize the interdependence of value judgment and factual judgment. Studies of preference are also, whether it is realized or not, studies of discrimination-ability, and vice versa. There can be no value-free studies of value, nor can there be fact-free studies of fact or value either.

MC CLURE, George. Automation And Social Inevitability. *Illiff Review* 23,25–30 Fall 66.

A discussion of social inevitability that on the one hand allows for, even depends upon, human freedom, but on the other hand recognizes and explains (with the aid of the social scientists' notion of "unintended consequences") massive social forces, such as the coming of automation, over which we have very little control. Given that large numbers of people freely choose X, and that, in some cases, X happens to be connected with an (unperceived) Y, it can happen that a real inevitability is created, about which no further planning or action can do very much.

MC CLURE, George. Growth As An Educational Aim: Reply To R S Peters. *Stud Phil Educ* 3,259–269 Fall 64.

I argue here that growth can indeed be taken as an educational aim provided it is understood that such an aim is a process-goal, not a product-goal. That is, a goal stated generically as a continuing dynamic, on-going affair, instead of the achievement of some settled state, such as being able to add and subtract, or recite the capitals of all the states.

MC CLURE, George. Resemblance And Purpose. *Phil Phenomenol Res* 25,180–187 D 64.

I argue that a full account of the logic of resemblance statements requires the use of

second-order predicates, giving the respect in which the resemblance is to be noted. Thus, "x resembles y" gets expanded into, "x resembles y with respect to some F." I then show that the full explication of what is involved in the statement of this third, or context-conferring term, must include values: the purposes for which the resemblance is to be noted. Though not explicitly argued, the article was designed to illustrate the utility of the assumption of the existence of universals.

MC COY, Charles N R. *The Structure Of Political Thought: A Study In The History Of Political Ideas.* NY McGraw-Hill 1963.

The author traces the history and development of political thought from Plato through Marx. Part One deals with the "Classical-Christian" tradition (Plato, Aristotle, etc.): Part Two provides an analysis of more modern writers (Machiavelli, Bodin, Mill, Burke, etc.). The author's approach is both descriptive and comparative: he discusses each individual's major contributions within the framework of the history of ideas. Heavy emphasis on classical and medieval political thought reflects the author's interest in problems of metaphysics, ethics, and the religious implications of political life.

MC DERMOTT, John J. *The Culture Of Experience: Philosophical Essays In The American Grain.* NY New York Univ Pr 1976.

His essays are not a contemporary about American philosophy, but rather an exhibition of the philosophical ideas central in the life of contemporary American culture. The scope of the essays seeks to touch the concerns of persons who are aware of the vital choices today, problems and ideas which are beyond those which recent philosophical fashion has claimed should be solely the occupation of philosophers. The essays thus, (1) acknowledge the tradition of William James, John Dewey, G H Mead and Josiah Royce in which experience is the philosophical touchstone, and (2) applies that tradition as an approach to diagnosis of the current human situation.

MC EWEN, William P. *Enduring Satisfaction: A Philosophy Of Spiritual Growth.* NY Philosophical Lib 1949.

Here is a book addressed "to those sincere and enlightened persons for whom traditional beliefs about human destiny do not provide an ultimate intrinsic value." The author presents a philosophical conception of how a reflective person might realize the enduring satisfaction which results from the achievement of freedom through spiritual growth. By cultivating good will, aesthetic appreciation, intellectual curiosity, and spiritual consecration, the author points the way to a discovery of a meaning and purpose for life. McEwen believes that there is an opportunity for philosophy to contribute to the spiritual reconstruction of our culture, and in writing this thoughtful and inspiring volume he has himself taken a steady, measured step along the way.

MC EWEN, William P. *The Problem Of Social-Scientific Knowledge.* Totowa NJ Bedminster Pr 1963.

In this volume, the author discusses the question "How is knowledge possible in the social sciences?" He is interested in developing for the social sciences something like the epistemological foundation formulated by Whitehead for the natural science areas of inquiry. McEwen suggests "an epistemological pattern of reflective inquiry from which I believe the techniques of behavioral research and the categories of behavioral theory are derived." He agrees with Dewey, however, that traditional theories of knowledge which were imposed on actual scientific inquiry in an arbitrary way must be rejected. McEwen therefore spends much more time on the methodological writings and research of practicing scientists than is customary in books on philosophy of science. Extensive consideration is given to psychology (individual and social), sociology, anthropology, economics, history, and political science.

MC EWEN, William Peter. Whitehead's View Of Personal Growth. *Personalist* 24,46-56 Ja-Wint 43.

- MC FADDEN, Charles J.** *Medical Ethics*. Philadelphia Davis 1953.
- MC FADDEN, Charles J.** Marxism: The Birth Of A Prejudice. *Mod Sch* 19,70-72 My 42.
- MC FADDEN, Charles J.** Metaphysical Basis Of Action In The Philosophy Of Marxism. *Proc Cath Phil Ass* 17,113-120 1941.
- MC GANN, Thomas F.** *Ethics: Theory And Practice*. Chicago Loyola Univ Pr 1971. This book is somewhat unusual in that it is concerned with moral theory and practice. These are approached from a Christian, specifically Roman Catholic, viewpoint. The discussions of such topics as free will and responsibility are rather standard, though the latter features an interesting discussion of the M'Naghten rule. As to "practice," McGann devotes an unusual amount of space to the topic of "Law and Morality." As examples of McGann's arguments, it is claimed that a legislator, though he may (as a Christian) disapprove of divorce, is "entirely justified in yielding to the community viewpoint." Fighting public opinion would only lead to disrespect for the law.
- MC GANN, Thomas F.** *Law And Philosophy: A Symposium*, Edited By Sidney Hook. *Int Phil Quart* 5,311-316 My 65.
- MC GEE, C D.** *The Recovery Of Meaning: An Essay On The Good Life*. NY Random House 1966.
- MC GEE, C Douglas.** A Simple Sketch Of Language. *J Phil* 57,489-498 Jl 60. The author asserts that language functions on three levels of explicitness and articulateness: classificatory and linguistic dispositions, ordinary written or spoken language, and formal logic. He then offers a sketch of this structure of language, in the process making a minimum case for intensionalism.
- MC GEE, C Douglas** and Tillman, Frank A and Gale, Richard M. Ryle On "Use," "Usage," And "Utility". *Phil Stud* 15,57-59 1964. The article examines Ryle's analysis of "Use," "Usage," and "Utility," charging that Ryle obscures rather than illuminates the distinctions between these concepts. The authors point out that central to Ryle's discussion is an analogy between words and tools, arguing that the analogy fails when Ryle attempts to make a distinction between use and usage. They argue that this failure can be seen in a disanalogy between words and tools in that words, unlike tools, are characteristically used in communication. To use a word correctly, they point out, the speaker must use it in conformity with linguistic custom; the use of a tool requires no such consonance with the customary usage of a group.
- MC GEE, C Douglas.** Explicit Definitions And Ethical Rules. *Ethics* 73,198-207 Ap 63. An analogy between explicit definitions and ethical rules can cast light on ethical argument both in the ways that the analogy holds and in the ways it does not. Explicit definitions are not matters of linguistic custom and therefore are not felt to compel their own acceptance. It is always possible to reject the recommendation of one. Explicitly ethical rules are related to the mores of a group as definitions are related to linguistic custom. Some characteristics of ethical argument thus resemble disagreement over definitions.
- MC GIBBON, Donal.** Metempsychosis In Pindar. *Phronesis* 9,5-11 1964.
- MC GIBBON, Donal.** Pleasure As The "Criterion" In Democritus. *Phronesis* 5,75-77 1960.

- MC GILL, V J (ed)** and Farber, Marvin (ed) and Sellars, Roy (ed). *Philosophy For The Future: The Quest Of Modern Materialism*. NY Macmillan 1949. This book presents a defence of metaphysical materialism. It urges this doctrine as the only one compatible with the existing scientific account of man and the cosmos, and predicts that future developments in the sciences will continue to validate a materialistic world view.
- MC GILL, V J.** *Emotions And Reason*. Springfield IL Thomas 1954. Broadly naturalistic in point of view, this book offers a critical discussion of various topics in psychology and ethics. Psychological needs, it is argued, cannot be treated adequately in terms of either the biocentric or the Freudian position. Social psychology and learning-theory must be brought to bear on these questions. It will then become evident that there is no sharp distinction between attitudes and beliefs, as the "emotive theorists" have claimed. The sceptical consequences of the latter school may thereby be avoided, and the way opened for an ethics which concerns itself with concrete social and personal problems.
- MC GILL, V J.** *The Idea Of Happiness*. NY Praeger 1967. An investigation of the controversy over happiness, beginning with Plato and continuing through contemporary self-actualization theory. The approach is nonphilosophical in the sense that it does not undertake to develop or defend a particular theory. However, Aristotelianism is adopted as a framework within which to compare diverse theories because it is the most complete and elaborate theory, asks the most questions, considers the most alternatives, and combines this amplitude with serious attention to consistency and proof. Those philosophers who give very different definitions of 'happiness' are talking about the same thing, but are offering a particular refinement of the root meaning of the word. The root meaning of 'happiness' appears to be something like this: A lasting state of affairs in which the most favorable ratio of satisfied desires is realized, with the proviso that the satisfied desires can include satisfactions that are not preceded by specific desires for them, but come by surprise.
- MC GILL, V J** and Welch, Livingston. A Behaviorist Analysis Of Emotions. *Phil Sci* 13,100-122 Ap 46.
- MC GILL, V J.** Behaviorism And Phenomenology. *Phil Phenomenol Res* 26,578-588 Je 66. A symposium (1964) of philosophers and psychologists discussed the issue: whether behaviorism can deal with privacy and private data. Skinner held that people ordinarily account for behavior in mental terms, but such explanations are abbreviations of the real thing. Malcolm held that behaviorism fails to account for introspective knowledge and cannot give an adequate explanation of first person singular reports. Macleod illustrated the neglect and use of phenomenology. Scriven predicted that the present disorganized and fragmented state of psychology would persist. Carl Rogers was critical of the objective methods in psychology and their failure to recognize that they depend on "subjective knowing."
- MC GILL, V J.** Comments On Sociological And Historical Theories. *Phil Phenomenol Res* 11,394-400 Mr 51.
- MC GILL, V J.** Conflicting Theories Of Freedom. *Phil Phenomenol Res* 20,437-452 Je 60. This article discusses types of freedom as distinguished and interrelated by Christoff and Geiger, and the overall treatment of the rival freedoms given by Adler and Mckeon. It is argued that the insights of the various types of freedom recognized by the above authors can be included in one of them—the theory of "self-realization," that freedom is the ability to do as one pleases under favorable circumstances. The article also explores the three freedoms of self-realization, perfection, and determination. Freedom occurs if the circumstances and/or one's abilities enable the person to do as he pleases. It is concluded that one should understand freedom relative to the particular desire the individual can act upon or fulfill, instead of talking elliptically of unqualified freedom.

- MC GILVARY, Evander Bradley.** *Toward A Perspective Realism*, Albert G Ramsperger (ed). La Salle IL Open Court 1956. The presentation, by means of lectures delivered in 1939 and then extensively revised, of a realistic philosophy which takes nature to be known to the organism in a given perspective. So apprehended, the world really has the physical and non-physical characteristics which appear to the knower. The perspective peculiar to the knower is determined by spatial and temporal constructions of the external world, and that world is the same for both common sense and physics, since both must build with the same empirical evidence. Einstein and Whitehead have had profound influence on McGilvary's philosophy. The problems considered include: consciousness, mind and body, relations and universals, freedom and necessity, and the conflict of moral values.

- MC GLYNN, James V** and Farley, Paul Mary. *A Metaphysics Of Being And God*. Englewood Cliffs NJ Prentice-Hall 1966. This is a text book of traditional scholastic metaphysics brought up to date with quotations from modern existentialists. It opens with a brief history of the metaphysical problem as the Greeks understood it, then it treats of the theory of act and potency. The importance of causality is established with the traditional arguments for the existence of the primary being or, as the authors say, pure existence. McGlynn considers how we know this pure existence and how the pure

existence operates. Finally, the transcendentals, unity and truth, and goodness and beauty are discussed with a treatment of the problem of evil.

MC GLYNN, James V and Toner, Jules J. *Modern Ethical Theories*. Milwaukee Bruce 1962.

All ethical theories begin with certain moral facts—the distinctions between good and bad and right and wrong, and the senses of obligation, freedom, and responsibility. The ethical systems of moral sense, formalism, utilitarianism, naturalism, analysis, existentialism, and psychoanalysis may be criticized according to whether they explain these facts adequately. All of them (except relativists and subjectivists) implicitly hold to the principle that what is "in keeping with [man's] nature will be considered good." Thus moral arguments resolve into the question of the ultimate end of man, and turn the question of the ultimate nature of man. The authors hold that man's ultimate obligation (derived from God's creation) is "to be morally creative" of values over and beyond specific "do's" and "don't's."

MC GOVERN, Thomas. Ethics As Science. *Proc Cath Phil Ass* 36,59–66 1962.

MC GOVERN, William Montgomery and Collier, David S. *Radicals And Conservatives*. Chicago Regnery 1958.

Liberalism is defined as the advocating of democracy rather than authoritarianism and individualism rather than statism. Within the liberal tradition are both radicals (Bentham, Jefferson, Jackson) and conservatives (Montesquieu, Burke, John Adams). Although the radicals were correct on some matters, the authors hold that the conservatives were more often right. Their book is intended to "provide at least the beginnings of a coherent philosophy of conservative liberalism." This task has great practical importance, according to the authors, for the success of the anti-collectivist movement depends upon the development of a conservative philosophy. In outlining their views, relatively brief and elementary discussions are given on the nature of man and the world, on the ethical foundations of their theory, on the ideal form of government, and on the aim and scope of the state.

MC GREAL, Ian Philip. An Analysis Of Philosophical Method. *Monist* 48,513–532 O 64.

Philosophy is an ordered activity which begins with a question, turns to an investigation of the uses of the language of the question (pragmatic analysis), and proceeds, if necessary, through the following ordered stages: pragmatic construction, semantic analysis, semantical construction, logical analysis, logical construction, metaphysical analysis, and metaphysical construction.

MC GUINNESS, B F. The Mysticism Of The *Tractatus*. *Phil Rev* 75,305–328 Jl 66.

McGuinness finds in the early Wittgenstein a metaphysics similar to that of nature mysticism. He discusses the relation between this kind of mysticism and Wittgenstein's views on logic, ethics, aesthetics, optimism, solipsism, and "living in the present." He suggests that Wittgenstein may have had some kind of mystical experience which influenced his early philosophy.

MC GUIRE, Martin C. On Conscience. *J Phil* 60,253–262 My 63.

This paper attempts to draw the broad outlines of our concept of conscience. It questions those accounts in which conscience is construed as consisting solely in certain psychological facts. Among other things, such accounts have obscured certain questions of importance in ethics, namely questions of the sort: "I know that this is the right thing to do, but shall I do it?" In general terms, it is argued, when a man's conscience speaks it cannot (logically) contradict his judgment; the force and function of a man's conscience is to encourage him to follow his judgment.

MC INERNY, Ralph M (ed). *New Themes In Christian Philosophy*. Notre Dame Notre Dame Univ Pr 1968.

MC INERNY, Ralph M. *Thomism In An Age Of Renewal*. Garden City NY Doubleday 1966.

The situation of Catholic philosophizing, after Vatican Council II, is here surveyed. McInerny (University of Notre Dame) discusses the historical attitude of his Church toward Thomism, the relations between philosophy and religious belief, the status of "Christian" philosophy today, and the role of philosophy in Catholic centers of study.

The approach to these problems is open-minded; the author is well aware of the major trends in contemporary thought. He maintains that Thomas Aquinas is still central in the work of most Catholic philosophers, but he also shows why this emphasis on Aquinas does not require acceptance of Thomism as an imposed system of thought.

MC KELWAY, Alexander J. *The Systematic Theology Of Paul Tillich: A Review And Analysis*. Richmond VA Knox Pr 1964.

The author's aim is "to set out in as brief and yet clear and complete a way as possible the theology of P Tillich." The "Systematic Theology" is the primary source, and this in its doctrinal aspects; there are references to other writings, especially "The Courage to Be." After a brief introduction helpfully relating Tillich to Schleiermacher, Ritschl, Bultmann, Barth and Reinhold Niebuhr, the major chapters define Tillich's correlational method (of existential question and Christian answer) and exhibit the correlations of the philosophical concepts of reason, being, existence, life and history with the theological concepts of revelation, God, Christ, Spirit and the Kingdom of God.

MC KEON, Charles K. *A Study Of The Summa Philosophiae Of The Pseudo-grosseteste*. NY Columbia Univ Pr 1948.

This book is an exposition of a work written by an undetermined author probably between 1265 and 1275, and consisting of nineteen treatises and two hundred and eighty-four chapters. The *Summa* begins with a short history of philosophy and proceeds through the nature of truth, the problem of knowledge, metaphysics, theology, cosmology, and the philosophy of nature, thus covering the sum of human knowledge. An aim of the present study is to interpret the *Summa philosophiae* as exemplifying the principles of Christian Platonism.

MC KEON, Richard. *Thought, Action, And Passion*. Chicago Univ Of Chicago Pr 1954.

This volume consists of an introduction and four essays. The chapters explore the centuries-long interplay among theory, practice, and emotion by means of four "themes" (love, truth, freedom and imitation) as treated by four "techniques" (philosophy, history, rhetoric, and poetry). The first theme, love, is developed by the technique of philosophy, but is seen to be more properly in the province of poetry; the second theme is truth, developed by history, although it belongs primarily to philosophy; the third theme, freedom, is developed by rhetoric through speeches used in a history; and the fourth and final one is imitation, a theme "used to explain the techniques of poetry," yet broadly related to rhetoric.

- MC KEON, Richard.** Conflicts Of Values In A Community Of Cultures. *J Phil* 47,197-209 Ap 50.
- The magnitude and diversity of problems facing a world organization, or community of cultures, is considered by the author. The four stage program, through which he feels a world community may be achieved, can be outlined as containing: (1) The defense of freedom of creation, thought, and expression. (2) An education for people which would include ethical and esthetic values. (3) The understanding that common values underly diversity of cultural expression. (4) Insight into the ambiguities which result from differences of method and expression.

- MC KEON, Richard.** Philosophy And The Development Of Scientific Methods. *J Hist Ideas* 27,3-22 Ja-Mr 66.
- The thesis of this article is that although philosophers have long noted the differences among the methods used by science, art, and practical action, there has been little analysis of philosophical importance of the differences in these methods. The author traces the analysis of the concept of "method" from the Greeks through contemporary philosophy. He concludes that more inquiry into the philosophy of method needs to be done, perhaps by investigating such concepts as creativity and discovery.

- MC KEON, Richard.** The Concept Of Mankind And Mental Health. *Ethics* 77,29-37 O 66.
- Two traditional ways of conceiving of the relation between individuals and societies are the analogical and the causal. The controversy between these two methods can be resolved by studying the concept of mankind and learning that both analogical likenesses and causal interactions between individuals and states can be found. The concept of mental health, a property only of individuals, is to be understood by reference to that of mankind. Prime causes of mental illness are stagnant and chaotic states of societies.

- MC KEON, Richard.** The Flight From Certainty And The Quest For Precision. *Rev Metaph* 18,234-253 D 64.
- Philosophy cannot serve as "a bridge to the future" until its internal dichotomies have been resolved. Noting that with the emphasis placed on concreteness in recent thought the quest for certainty has been abandoned in favor of a quest for precision in the treatment of facts, the author argues that the virtues of the contemporary philosophical temper cannot be cultivated without relating innovation to tradition, plurality to unity, fact to value, and objectivity to subjectivity. He then examines each of the dichotomies so identified.

- MC KEON, Richard.** The Relation Of Logic To Metaphysics In The Philosophy Of Duns Scotus. *Monist* 49,519-550 O 65.
- In the development of logical theory from the twelfth to the fourteenth century, the new logic was distinguished from the old logic when the last four books of Aristotle's *Organon* were translated, and the modern logic was distinguished from the ancient logic when the principles of demonstration were found in rhetorical or dialectical topics or sophistical paradoxes rather than in analytical causes. The "old logic" and the "new logic" continued to be used to designate two sets of problems, and William of Ockham wrote treatises on both. "Moderns" was not a synonym for "nominalists" in the fourteenth century, and the innovations in logic of that century were made by both "ancients" and "moderns." According to Duns Scotus the problems of the old logic are problems of the interpretation of sentences and the definition of simple terms from that interpretation; the problems of the new logic are problems of the analysis of inference and the interpretation of sentences from that analysis.

- MC KINNON, Alastair.** Unfalsifiability And The Uses Of Religious Language. *Amer Phil Quart* 2,229-237 Jl 65.
- This paper attempts to answer the charge that religious claims are unfalsifiable by an examination of certain contexts and uses of typical religious utterances. Working with a model from science, it distinguishes the assertional, the self-instructional, and the ontological-linguistic uses and offers a detailed analysis of each. It shows that the first is in principle always falsifiable but that, since, so used, it is really a blank for a variety of possible assertions. The utterance itself is never finally falsifiable. It shows that the falsifiability demand is inappropriate to the second use and hence to the utterance so far as this is a constituent element. Finally, it argues that the third use is an unfalsifiable but significant factual claim and that, so far from being a defect, this is an essential feature of this use and a condition of the job for which it is actually intended.

MC LEAN, Robert Colin. *George Tucker: Moral Philosopher And Man Of Letters*. Chapel Hill Univ Of N Car Pr 1961.

This book is concerned with George Tucker (1775-1861), American ante-bellum Southern writer. Mr McLean aims to give "an accurate, unvarnished account of Tucker's life," "a description and evaluation of his imaginative writings," and a discussion of his thought. He describes Tucker as "a radically conservative thinker who devoted much of his ability to defending slavery" and emphasizes the important influence of Scottish "common sense" philosophy on him.

MC LELLAN, David. *Karl Marx: His Life And Thought*. NY Harper & Row 1973.

After a brief sketch of Marx's life, McLellan presents a clear overview of Marx's early thought (including Marx's debt to Hegel), and then outlines the main features of his philosophy of history, economic doctrine, and social and political thought. McLellan's emphasis on the open-ended character of much of Marx's thought on specific issues is of particular value in dispelling the doctrinaire character of many orthodox interpretations of Marx, and his reputation.

MC LENDON, Hiram J. Beyond Being. *J Phil* 57,712-724 O-N 60.

In order to appraise the identification of God with being itself, the author scrutinizes the claim that there can be a science of being. He argues that since "to be" is not referential in character and there is no conceivable special subject matter answering to "being itself," there is no science of being. Therefore, he rejects the identification of God and being.

MC MAHON, A Philip. *Preface To An American Philosophy Of Art*. Chicago Univ Of Chicago Pr 1945.

In his own words, "The reader will find here an argument as to why the prevailing attitude of philosophical idealism with regard to art is unacceptable; but the conclusion of the discussion is not simply negative, for immediately afterward contributions toward a superior alternative are offered." By "superior" one might suppose that Mr McMahon merely means "more adequate" or "more probable." He makes it quite clear, however, that this is *not* what he means. "This alternative," he says, "is held to be superior because it does not demand subservience to an alien mode of thought and because it makes art worthy of the devotion of those who prefer a theory of art in accord with our normal habits of thinking and acting."

MC MAHON, Bernard. Some Moral Problems Of A Victorious Army Of Occupation. *Proc Cath Phil Ass* 19,27-36 1943.

MC MAHON, Joseph H. *Humans Being: The World Of Jean-Paul Sartre*. Chicago Univ Of Chicago Pr 1971.

MC MAHON, Thomas F. *Imperfect Supernatural Happiness Of This Life: A Definition*. Chicago 1962.

The author employs Thomistic categories to demonstrate the nature of supernatural participation in happiness, which he discovers to be "the act of living enlightened faith." In this way, the author contends, man begins to "possess God, the Author of Grace and Glory."

MC MANMON, John J. The Problem Of A Religious Interpretation Of Gulliver's Fourth Voyage. *J Hist Ideas* 27,59-72 Ja-Mr 66.

The author's thesis is that although many critics have attempted to interpret the Fourth Book of *Gulliver's Travels* in terms of Christian doctrine, there seems to be little internal justification for this. Some critics err in not being able to specify which variation of Christianity is involved. Others err in drawing unfounded connections between different works by Jonathan Swift. Still others assume that biographical data about an author must emerge in his writings. This article refutes each of these in turn, and suggests that a more accurate interpretation would limit itself to the material found in the work itself.

MC MULLIN, Ernann. Medieval And Modern Science: Continuity Or Discontinuity? *Int Phil Quart* 5,103-129 F 65.

There is a fundamental discontinuity between Aristotelian and modern science regarding most questions of method; insofar as the medieval period formed a bridge to the modern one, it was precisely to the extent that it saw the modification, or the beginnings of rejection of, some central Aristotelian themes. Nevertheless, medieval science remained basically Aristotelian in its approach. The transition from it to modern science was not a gradual evolution due to internal re-working, but much more a *revolution* in which the literary Renaissance, the growth of technology, as well as many other agencies outside the domain of science itself, contributed to a change of intellectual climate in which the Aristotelian approach to natural inquiry no longer made sense.

MC MURRIN, Sterling M. What About The Philosophy Of Education? *J Phil* 59,629-637 O 62.

One thesis of this paper is that the chief deterrent to the advancement of the philosophy of education as a respectable discipline is the obstinate assumption that from metaphysical premises differing educational systems can and should be derived. The almost inevitable outcome of this approach is an indoctrination of students in schools of education in one or another metaphysical theory, in order to establish the virtues of a particular theory of learning. However, the problem is not to eliminate philosophy from the curricula of these schools. On the contrary, the problem is to extend that study and to put it on a more firm and meaningful basis.

MC NALLY, Raymond T. Chaadaev Versus Xomjakov In The Late 1830's And The 1840's. *J Hist Ideas* 27,73-91 Ja-Mr 66.

This article traces the intellectual development of two Russian polemicists, Petr Jakovlevich Chaadaev and Aleksej Stepanovich Xomjakov. Using newly available source material, the author constructs the debate between them on the nature of Russia. Chaadaev believed in a European ideology based on Western Christian social values; Xomjakov believed in one based on Eastern Christian ascetic sentiments and native Russian mores.

- MC NEILL, John J.** Martin Buber's Biblical Philosophy Of History. *Int Phil Quart* 6,90-100 Mr 66.
- The most notable inspiration for Martin Buber's philosophy of I-Thou was in his Biblical studies of the dialogue between man and God in the spiritual history of the Chosen People. Father McNeill's article is the first organized application of the intuitions and explicit statements of Buber's works that lend to a new dialogical approach to history. After a synthetic statement of these principles, the author formulates that approach as being an active acknowledgement of the fundamentally existential and dialogical character of human evolution. This, he declares, would be necessarily in direct contrast to the tendency of philosophers and historians who detach history from its concrete ground in the historical present by viewing it as a network of inter-relating abstractions and thus render sterile the vital force at the core of each civilization. In this new approach, history is given its rightful place as a living encounter.

- MC QUADE, Francis P A.** *Philosophical Interpretation Of The Contemporary Crisis Of Western Civilization*. Washington DC 1950.
- The author attempts to place a philosophical interpretation on the contemporary crisis of Western civilization. His treatment is divided into three parts. "The Nature of the Crisis" discusses the philosophy of order and the philosophy of disorder. "The Origin of the Crisis" discusses historical optimism, pessimism and moral realism. "The Destiny of the Crisis" discusses the inadequacy of historical monism, the sovereignty of God over history, and the transfiguration of Man and History. "From a philosophical point of view," he asserts, "the breakdown in civilization is basically the breakdown in man." He sees Christian love as the underlying virtue for the reconstruction of humanity. "It will be for our generation to rediscover with St Paul that the foolishness of the Cross is wiser than the wisdom of men."

- MC RAE, Robert.** "Idea" As A Philosophical Term In The Seventeenth Century. *J Hist Ideas* 26,175-190 Ap-Je 65.
- The author traces the use of "idea" in the Seventeenth century. He states that there are three uses of the term found in Descartes: a) that an idea is an object; b) that it is an act; c) that it is a disposition. The author examines the historical source and philosophical importance of each of these. He concludes that Descartes' followers disagreed among themselves on which definition was accurate, and finds that this controversy still does not allow us a clear view of Cartesianism.

- MC TIGHE, Thomas P.** Scotus, Plato, And The Ontology Of The Bare X. *Monist* 49,588-616 O 65.
- Duns Scotus is commonly thought to be a Platonist, while W V Quine is vigorously anti-Platonic. Ironically, however, the two display similarities in their respective failures to account for predication. By the more significant test of density rather than realism of essence Scotus is not a Platonist. The Scotistic essence is a positive content having its own being within the singular. Hence the Scotistic individual is not a bare x. Plato's One, however, and Quine's referent for singular terms display remarkable affinities. For both the ultimate subject of predication is an individual shorn of determinateness, the bare x of Quine, the One of Plato. The result is that all predicates are equally alien to their subject. Scotus also fails to overcome this alienation. Neither the metaphysics of positivity nor the ontology of the bare x succeeds in getting existence and content to live in harmony within the individual.

- MEAD, George H.** Metaphysics. *Rev Metaph* 17,536-556 Je 64.
- In this previously unpublished paper discovered after his death in 1931, Mead distinguishes the work of the metaphysician from that of the scientist and comments on universals and particulars, the notions of cosmic order and mathematical intelligibility, the concept of relations, the epistemological status of exact statements in science, the concepts of causation, uniformity, and probability, emergence, and the principle of sociality.
- MEAD, George H.** Relative Space-Time And Simultaneity. *Rev Metaph* 17,514-535 Je 64.
- Mead addresses himself to several issues relating to the concept and experience of time in this posthumous paper. He first discusses the conditions for simultaneity under relativity theory. He then considers the relationship between temporal perception and contingency, before discussing the problem of passage as posed by Hegel and criticizing Whitehead's views on the structure and the extent of the specious present. Mead next argues that the Romantic return to the past involved an essentially new type of self-consciousness. Finally, he discusses mind, consciousness, and reflective perceptual experience.

- MECKLER, Lester.** The Value-Theory Of C I Lewis. *J Phil* 47,565-578 S 50.
- The author maintains that the value-theory of C I Lewis rests largely on his theory of knowledge. This view is established by examining ideas in Lewis's value theory and their relation to his theory of knowledge. The areas discussed are: Lewis's theory of valuing, judging, and experience, the notion of the categorical imperative and its ambiguous relationship to his theory of knowledge, Lewis's conception of "social value," and his distinction between value theory and ethics.

- MEEHAN, Eugene J.** *The Foundations Of Political Analysis: Empirical And Normative.* Homewood IL Dorsey Pr 1971.
- The volume seeks to present a model that can be applied to both empirical and normative inquiry in social science, and thus resolve the dualism of explanation and value judgment. Its outlook is experimental, its purpose to place normative recommendations on a footing compatible with procedures of explanation. The author suggests that the low quality of explanations in social science has most important implications for the quality of normative decisions.
- MEEHAN, Francis X.** *Efficient Causality In Aristotle And St Thomas.* Washington DC 1940.
- The first half of the dissertation discusses the general concept of cause, the sources and nature of Aristotle's theory of the four causes, the characteristics of efficient causes as distinguished from the other three types, and, in connection with efficient causality, the problem of a first efficient cause and that of uniformity in natural causation. The second part of the study goes over the same topics in connection with St Thomas, and shows how the Angelic Doctor corrected Aristotle by introducing the concept of absolute efficient cause productive of being in the unqualified sense.

- MEHTA, J L.** *Martin Heidegger: The Way And The Vision.* Honolulu Univ Pr Of Hawaii 1976.
- This study seeks to chart the "totality" of Heidegger's thought by following the "way" he attains his "vision." The general portions of the book deal with the development of Heidegger's thought, specifically his method and language, and how it relates to past philosophies (Greek and modern). The question that is considered is, of course, what is Being and time. Specific attention is devoted to: the problem of the meaning of being; man and the world; man's existential structure; man's wholeness and authenticity; man and temporality; and historicity and the concept of time.
- MEI, Tsu-Lin.** Chinese Grammar And The Linguistic Movement In Philosophy. *Rev Metaph* 14,463-492 Mr 61.
- The author's purpose is to show, by describing relevant grammatical differences between English and Chinese, that the importance and validity of certain philosophical theses are relative to their object language. Supporting this argument by reference to standard textbooks in Mandarin grammar, the author first demonstrates that Frege's distinction between numerals and adjectives and Ryle's distinction between tasks and achievements are true but trivial. The author then argues that Daitz's assertion, with regard to the picture theory of meaning, that a sentence states but its parts cannot state is invalidated by Chinese grammar, as is Strawson's criterion for the subject-predicate distinction.
- MEI, Tsu-Lin.** Subject And Predicate, A Grammatical Preliminary. *Phil Rev* 70,153-175 Ap 61.
- MEI, Tsu-Lin.** The Logic Of Depth Grammar. *Phil Phenomenol Res* 24,97-105 S 63.
- The overall purpose is to clarify the relationship between ordinary language philosophy and structural linguistics. The author illustrates, with two examples of linguistic philosophy (Frege and Ryle), that herein is structural linguistics in disguise. Their distinctions can be made in terms of the occurrence of expressions relative to other expressions, without the intrusion of features such as meaning or use.

Therefore, he asks us to reconsider the nature of ordinary language philosophy, because it is sufficient, if conceptual clarification is the aim, to attend to the grammatical forms of language alone. Language philosophy will be needed less as we know more about English.

- MEILAND, J W.** Are There Unintentional Actions? *Phil Rev* 72,377-381 J1 63.
- Meiland argues that there are no unintentional actions. "Intentional" and "unintentional" indicate the status of the results of actions and are not adjectives modifying "action."
- MEILAND, J W.** Do Relations Individuate? *Phil Stud* 17,65-68 1966.
- The article takes up the question of what is it that renders two exactly similar material objects numerically different from one another. The author takes issue with E B Allaire's position that each of two numerically different material objects contains a different "bare particular," arguing that the theory of bare particulars provides an account of the numerical differences of things at the price of making it impossible to determine whether or not a given case is a case of numerical difference. He concludes that the theory of bare particulars is implausible and that relations do individuate material objects.
- MEILAND, J W.** Knowledge Of Past Qualities Of Life. *J Phil* 63,580-581 O 66.
- MEILAND, J W.** Temporal Parts And Spatio-Temporal Analogies. *Amer Phil Quart* 3,64-70 Ja 66.
- To what extent is time similar to space? In this paper it is shown that the claim, made by Richard Taylor among others, that time and space are "radically alike" is unfounded. This claim can be supported only by employing the notion of temporal parts. It is shown that if objects are regarded as having temporal parts as well as spatial parts, then serious disanalogies exist between time and space. Furthermore, if objects are said to have temporal parts, then it must also be held that time is in a very important sense "prior" to space and this that time and space are not only unlike in certain respects but indeed are radically dissimilar. Moreover, the so-called "manifold theory of time" necessarily makes use of the notion of temporal parts and therefore should hold that time and space are quite unlike. But since an important part of the manifold theory of time is the claim that time and space are very much alike, this theory is to that extent not satisfactory.
- MEILAND, Jack W.** *Scepticism And Historical Knowledge.* NY Random House 1965.
- Meiland provocatively and yet technically presents the case for "the Constructionist Theory of History." According to this theory, historical knowledge is impossible and the historian constructs accounts of ostensibly past happenings for other purposes. The author starts by explaining Constructionism as it appears in Croce and Oakeshott. This is followed by a refutation of Collingwood's attack on Constructionism. He also considers at length the various forms of Historical Relativism. Although Meiland rejects the criticisms of Historical Relativism offered by Nagel, Berlin and others, he agrees that Historical Relativism does not provide a sound basis for scepticism about historical knowledge. However, he presents five different arguments which provide a better foundation for historical scepticism. He devotes a chapter to a defense of Constructionism against four different theories of how we acquire the concept of the past.
- MEILAND, Jack W.** *Talking About Particulars.* NY Humanities Pr 1970.
- The book discusses what we are doing when we refer. After rejecting the claim that referring statements can all or mostly be identified with existential statements and the context theory of referring, it develops an amended abbreviation theory which however is also condemned as inadequate on the ground that one name may have abbreviated descriptions which uniquely fit two separate individuals. This necessitates the introduction of a reference to the speaker's intentions, but it is then found that a definition is possible in terms of these which has no need to regard names and descriptions as abbreviations. But the intentions must be one which aims at a particular individual and the thought of this individual may be regarded as related essentially to a description and so to language.
- MEISEL, James H.** *The Myth Of The Ruling Class, Gaetano Mosca And The "Elite".* Ann Arbor 1958.
- This is a many-sided study of contemporary elitist political theories in general and that of Gaetano Mosca in particular. It contains an intellectual biography of Mosca, tracing the development of his thought from an early anti-democratic, anti-socialist period to a later period when the accession of Italian fascism made him shrink from

- the consequences of his own ideas. Emphasis is placed on those of Mosca's works which have not yet been translated into English, particularly the works of his old age. Professor Meisel makes great use of the distinction between fact and "myth" in his treatment of Mosca's theory. In general, he is highly respectful of Mosca, but unfriendly to elitist theory. The book also treats critically the views of other recent "elitists" — Pareto, Croce, Schumpeter, Burnham and C Wright Mill — as well as such "root and branch rejectors of elitism" as Carl J Friedrich. A translation of the final chapter of Mosca's *Storia Delle Dottrine Politiche* (1933) is included as a supplement.

- MEISSNER, W W.** The Implications Of Experience For Psychological Theory. *Phil Phenomenol Res* 26,503–528 Je 66.
- The question is raised whether the methods of psychology are adequate to provide an account of human behavior in terms meaningful for human existence. Also, the relationship between psychological theory and the evidence upon which it rests is discussed. "Correlationism" and "constructuralism" are presented as two opposite orientations to theory in psychology. The author questions whether experience should be accepted as legitimate evidence and concludes that there should be acceptability of inner experience as legitimate scientific evidence in its own right. The author thinks the methodologies of operation-ism and behaviorism to be limited. The scientific method, as used on the person and their experience, must remain at the descriptive level for some time to come.

- The article affirms (with Whitehead) that "all order is aesthetic order and the moral order is merely certain aspects of the aesthetic order," and reaffirms that no aspect of naturalism is unambiguous. The concrete emergent quality of work within the universe is a thrust or movement not only beyond the natural, but also beyond the aesthetic. As a perceptive way of understanding which is simultaneously "a bodily event" and "a valuating event" coterminous with the act of individuation, then, the aesthetic dimension of intelligibility may be regarded as the nearest to the reality of experience as this relates to either the natural order or the good life.

- MELZER, John Henry.** *Functionalism: An Outline Of A Philosophy For Today.* NY Philosophical Lib 1965.
- This study is designed to give an outline of a philosophy which can be put to use in a person's daily life. The author declares that though his functionalism is in the pragmatic tradition, it is not to be identified with pragmatism primarily because of pragmatism's relativism. The author in successive chapters uses the "functional" approach to establish his views on metaphysics, logic and epistemology, religion and ethics, aesthetics, education, and politics. The concluding chapter gives a summation of a functional philosophy of life.

- systematic Politics* is catholic in scope. It surveys not only the data of political science as such, but it includes the relevant conclusions and materials of all the sciences in so far as they have a bearing upon an understanding of man's political activities when viewed "in the context of the total physical, economic, and social scene." The inclusion of relevant materials drawn from psychology, anthropology, economics, jurisprudence, history, biology, and geography; the attempt to approach the problems of political behavior contextually; the inclusion of structural and functional analyses of the data, of empirical findings and theoretical analyses of both special and general political problems, constitutes a tremendous undertaking.

- MEYER, Agnes Elizabeth.** *Education For A New Morality*. NY Macmillan 1957.
- MEYER, Alfred G.** *Marxism: The Unity Of Theory And Practice*. Cambridge Harvard Univ Pr 1954.
The first part of this work is a brief survey of the structure of Marxist thought with special concern for its enduring contributions to social theory. The second part is an investigation of the "faults and flaws and blind spots" of Marxism, as well as of the way in which "the structure of Marxist ideas fell apart as the inadequacies in the under-pinnings became apparent." The critical section examines the function of Marxism as a received body of theory in several historic contexts.
- MEYER, Arthur E.** *Mind, Matter And Morals*. NY American Pr 1957.
Maintaining that the law of causation is the common denominator of all possible experience and knowledge, the author constructs a world picture on this basis. Thus he aims to provide a "natural" basis for religion and ethics. He draws on researches in physical science, biology, neuro-physiology, and depth-psychology in order to construct a theory of human behavior in accord with "the guiding spirit of the universe." He affirms the individual's right to happiness and self assertion, claims that the basis of ethics is "the inborn need to love," and believes that the satisfaction of this need may remove the "widespread feelings of guilt" within our culture.

- MEYERHOFF, Hans.** *Time In Literature*. Berkeley Univ Of Calif Pr 1955.
This book is an analysis of the treatment of time in literature and its relationship to science and philosophy. Since the consciousness of time seems to the author to have greatly increased in contemporary culture, he refers primarily to such twentieth-century authors as Proust, Joyce and Mann.
- MEYERHOFF, Hans.** Emotive And Existentialist Theories Of Ethics. *J Phil* 48,769-782 D 51.
The emotive theory of ethics, often associated with a logical form of empiricism, and existential ethics, as represented by Sartre, Heidegger, etc., are considered to have similarities in their analysis of the status of moral judgments. The author sets out to show: (1) how both movements converge on the same or similar theory of ethics, (2) what are the specific points of agreement or similarity between them and, (3) what this strange juxtaposition may mean in terms of contemporary ethical theory.

- MEYNARD, Benjamin.** *The Nature Of Ego: A Study*. NY Philosophical Lib 1962.
This book is a "primer" for any rational inquiry into the Ego, meaning here "primary Ego," and distinguished from "false Ego" and "secondary Egoes." The author also postulates a larger and dominant part of the individual, the "psychic background," for which the Ego functions as observer (its root function), and in which valuation and decision take place. After brief speculation as to the physical nature of Ego, and an outline of the relations of Ego to religion and duty (ethics), the study concludes with an examination of the possibility that Ego might become an instrument for the direction of human evolution.
- MEYNELL, Hugo A.** *An Introduction To The Philosophy Of Bernard Lonergan*. NY Barnes & Noble 1976.
This book is a synoptic presentation of the philosophy of one of the most important contemporary Transcendental Thomistic philosophers, Bernard Lonergan. According to Lonergan, the real world is not simply the object of experience, but the object of judgments framed in terms of insights made on the basis of experience. The patterns which emerge from such a study constitute the core of a general metaphysics. Meynell's book sketches the general lines of Lonergan's metaphysical analysis, and gives special attention in the second part to questions of hermeneutics, practical reasoning, the existence of God, and religious faith.

MILLARD, Richard M and Bertocci, Peter A. *Personality And The Good: Psychological And Ethical Perspectives*. NY McKay 1963.

This elaborate book is divided into five parts. First, it surveys contemporary depth psychology; second, it surveys three problems of theoretical ethics; third, it reviews classical and contemporary solutions to ethical problems; fourth, after having provided a normative "symphony of values," it proposes "principles of ethical choice"; fifth, it aims to guide the reader in problems of political decision, sexual conduct, and religious faith. The distinctive feature is an argument for the mutual dependence of psychology and philosophy. "psychoethics," the authors' position, challenges both psychologists who would usurp the role of moralists, and ethicists who would ignore psychology. The main thesis is that the *ought* is not reducible to the *is*, but that the *ought* has roots in the *is*. The human predicament is stated as "The Struggle against Chaos." This struggle is carried on biologically, psychologically, and morally. The solution is an ethics of self-realization. The authors defend reason's ability to maximize satisfactions and to guide harmonious personal growth that does not rule out freedom and creativity.

MILLER, Cecil. Complete And Incomplete Acts Of Thought. *Ethics* 77,67-72 O 66.

The prestige of natural science has had a bad effect on method in the social sciences, at least in part due to the influence of John Dewey's description of the five stages of scientific problem-solving in *How We Think*. What Dewey ignores there is the difference between penultimate and ultimate or final conclusions, complete and incomplete acts of thought. In the social sciences, a sixth stage of problem-solving develops the social and contextual meaning of the fifth.

MILLER, Clyde Lee. Maimonides And Aquinas On Naming God. *Journal Of Jewish Studies* 28,65-71 Spr 77.

This paper discusses the doctrines of Maimonides and Aquinas regarding what may be properly said of God in non-metaphorical language. Part I takes up "attributes of action" and "negative attributes" and shows that these teachings of Maimonides do not leave us speechless but enable us to reach a new level of understanding of the deity. Part II takes up Aquinas' "analogical naming" of God and shows that his restrictions on such naming yield little further positive sense to our talk about God than does Maimonides. In practice, the teaching of each man may be closer to the other than their explicit doctrines and differences suggest. Neither lets us know or say about the deity all that we might desire.

MILLER, Clyde Lee. Rule By One Man And Its Rewards: Aquinas' *De Regno* I, 2 And I, 8-11. *The Thirteenth Century, Acta* 3,53-64 1976.

This paper discusses two sections of the unfinished *De Regno*. Part one focuses on Aquinas' theoretical defense of monarchy, tracing it to earlier Neo-Platonic ideas. Parallel texts in Aquinas show that he is as ready to explain God's rule in terms of earthly kingship as to use God's monarchy to justify earthly monarchy. Part two takes up a more finished section of *De Regno* where Aquinas' purpose is almost homiletic, urging that kingly rule be used for good rather than for ill. Here Aquinas adds a further dimension to the analogy between political rule and rule of the universe—that of the kingdom of grace.

MILLER, D S. Moral Truth. *Phil Stud* 1,40-46 Ap 50.

MILLER, David L. *George Herbert Mead: Self, Language, And The World*. Austin Univ Of Texas Pr 1973.

This book is a presentation of Mead's philosophy as a system, showing how his social behavioristic theory of mind and the self is integrally related to his cosmology, his theory of the physical thing, the theory of relativity, and the objective reality of perspectives; it also shows how his principle of sociality applies to all of his works. Mead's theory of the origin and function of language is addressed to such questions

as the nature of mind, thinking and knowing, solipsism, private language, the psychical of subjective in contrast to the objective, the intersection of perspectives or the basis for universality and shared meanings, and communication at both the non-symbolic and symbolic levels. In many instances Mead's theories of emergence, process, and creativity are compared and contrasted with the philosophy of Alfred North Whitehead. On the problems of language, mind and meanings, Mead is compared and contrasted with recent British analysts.

MILLER, James Wilkinson. Descartes's Conceptualism. *Rev Metaph* 4,239-246 D 50.

MILLER, James Wilkinson. Logical Dualism. *J Phil* 47,341-352 Je 50.

The author proposes a theory of universals which involves a synthesis of the partial truths in nominalism and universalism. Logical dualism, as briefly sketched by the

author involves: (1) Some general terms owe their generality to their signifying classes of particulars. (2) Some other general terms owe their generality to their signifying universals. The article begins with an examination of nominalism and universalism and concludes with a full and direct statement of logical dualism.

MILLER, James W. The Development Of The Philosophy Of Socrates. *Rev Metaph* 6,551–562 Je 53.

MILLER, K Bruce. *Ideology And Moral Philosophy*. NY Humanities Pr 1971.

For Miller a moral ideology is "a dynamic, methodological approach to mobilizing will on both a particular and a universal scale in order to change history on the basis of a world-view subjected to universal moral norms." Add to this the claim that these norms are those of a fundamentalist Christianity and the conviction that the competing values of Marxism are immoral and bad and you have the central theses of this book. Academic theories of ethics are intellectualist and non-dynamic: they do not concern themselves with willing and acting. Throughout the argument C I Lewis looms large but Miller advocates a morality of absolutes which Lewis would hardly have recognized.

MILLER, Kenneth E. John Stuart Mill's Theory Of International Relations. *J Hist Ideas* 22,493–514 O–D 61.

MILLER, Leonard G. Descartes, Mathematics, And God. *Phil Rev* 66,451–465 O 57.

MILLER, Leonard G. Moral Scepticism. *Phil Phenomenol Res* 22,239–245 D 61.

The moral sceptic is one who believes morality cannot be justified and therefore there are good reasons for being suspicious of it, and further, that one who continues to maintain a moral position is being unreasonable. The author maintains that even though the concept of justification does not apply, the sceptic is mistaken in drawing the conclusions he does. The sceptic contends that in the absence of reasons, it is unreasonable to believe. It is concluded that it is impossible to reason us from morality into scepticism.

MILLER, Oscar W. *The Kantian Thing-in-Itself, Or The Creative Mind*. NY Philosophical Lib 1956.

Two chapters outlining and commenting on the "historical development of the idea of the Thing-in-itself" from the pre-Socratics to Kant are followed by a suggested "solution for the Thing-in-itself." The author believes that "things-in-themselves" may be of the "nature of hypotheses or concept-values." He presents a view that the "I-in-itself" is the "ultimate thing-in-itself," and that this is "the cognizing mind of the individual," culminating in the position that "all of Reality is Mind-Reality. The whole of the Natural World is what it is because of the presence and activity within it of a cosmic mind."

MILLER, Perry. *Nature's Nation*. Cambridge MA Belknap Pr 1967.

This posthumously published book consists of fifteen essays by P Miller. An introduction by K Murdock defines P Miller's quest as a scholar of American thought and literature, and describes the nature of Miller's contribution to American studies. The introduction supplies a framework for the essays which can be read individually as additions to our historical and critical knowledge about the American mind. Some deal with Puritan covenant theology and its fate in the American environment. Nearly half the pages of this book focus on religious themes. Miller considers next the theme of nature, and examines transcendentalism in philosophy and romanticism in American literature the Puritan thinkers thus being succeeded in Miller's studies by considerations of Emerson, Parker, Thoreau, Hawthorne, Melville. Even when Miller turns to contemporary writers like Hemingway and Faulkner, his gaze is often directed to the primacy of articulate self-scrutiny in their works, a feature characteristic of the thought and writing of the early Puritans.

MILLIKAN, James. Wild's Review Of *Being And Time*. *Rev Metaph* 16,780–785 Je 63.

The author argues that John Wild's critical assessment, in his 1962 review article, of the Macquarrie-Robinson translation of Heidegger's *Being and Time* is unjustified. He first discusses what can reasonably be expected of a first translation of a work for which there is no standard interpretation, and considers Wild's insistence upon the non-technical terms of ordinary language. He then examines the translators' choices and the alternatives Wild suggested.

MILLNER, Simon L. *The Face Of Benedictus Spinoza*. NY Machmadim Art Ed 1946.

MILLS, C Wright. *Sociology And Pragmatism: The Higher Learning In America*. NY Paine Whitman 1964.

This is C W Mills' doctoral dissertation, published for the first time. In it, Mills provides a sociological analysis of pragmatism in American life, its connection to the social structure, and its relation to professionalism in higher learning in American universities and colleges. Mills treats extensively Charles Peirce, William James and John Dewey. He shows how pragmatism developed in the United States with the shift from rural sociality to urban corporacy, how pragmatism was related to liberalism in social policy, and how it had an impact upon American institutions. Mills draws upon the sociology of knowledge, and he provides facts and statistics to document his position. Although he never provides a complete account of the relationship between sociology and pragmatism, nonetheless there are all too few studies of the sociological roots of philosophical theories; and Mills' account is significant in the departure it attempts to take.

MILMED, Bella K. *Kant And Current Philosophical Issues: Some Modern Developments Of His Theory Of Knowledge*. NY New York Univ Pr 1961.

Attempting to show Kant's relevance to twentieth century epistemological discussion, the book focuses on two ongoing problems—the splits between logic and experience and between the phenomenal and the existential. To exhibit in Kant the basis both for the problems and for their solution, it disentangles the doctrines that he builds upon his own philosophical premises from his adaptations to the logic, mathematics, and science of his time. Adaptations of Kant's doctrines to modern logic, mathematics, and science are traced in Lewis, who loosens the conceptual structure, and in Reichenbach, who (despite disclaimers) treats probability logic as Kant treats deductive logic.

MILMED, Bella K. Dewey's Treatment Of Causality. *J Phil* 54,5–18 Ja 57.

Dewey's view of causality as a "logical category" is analyzed as decidedly Kantian despite his disclaimer. He regards causality as a feature of explication rather than of events, derived by deduction (from hypotheses) rather than by observation of recurring sequences. His emphasis on experiment is distinctive; but his concept of causal laws as guides to experimental inquiry is analogous to Kant's concept of causality as a regulative principle. Both concepts are intended as means of explaining the applicability of logic to events; but to bridge the gap completely, both require supplementation by Lewis's concept of holophrastic and analytic meaning.

MILMED, Bella K. Lewis And The Theory Of Truth. *J Phil* 53,569–583 S 56.

C I Lewis, regarding himself as a pragmatist, repeatedly attempts to identify truth with verification. It is here argued, however, that a correspondence or semantic theory is required by (1) Lewis's interpretation of objective judgments in terms of "possible experience" and of possible experience in terms of counterfactual conditions; (2) his distinction between the justification of knowledge and the truth of knowledge; and (3) his logical analysis of truth in terms of the extension (known or unknown) of propositions. It is then argued that verification determines knowledge but reality determines truth, and that Lewis himself emphasizes "the transcendence by reality of our present knowledge of it."

MILMED, Bella K. Lewis's Concept Of Expressive Statements. *J Phil* 51,201–212 Ap 54.

C I Lewis argues that "expressive statements" (assertions of the mere apprehension of sense data) are both certain and indispensable to empirical knowledge. This paper supports that view, on the grounds that such statements are both analytic and empirical. They reduce to "I experience this"—analytic to the hearer and synthetic to the speaker. They do not, as Lewis claims, make probable knowledge "certainly probable," nor is this required; but in predictive form they are indispensable for the "terminating judgments" on which Lewis shows empirical knowledge to be based.

MILMED, Bella Kussy. "In Memoriam" A Century Later. *Antioch Rev* 10,471–492 Wint 1950–51.

Tennyson's awareness of a conflict between science and religion, with his resort to religious emotions in place of conclusions, provides a background for consideration of twentieth century confrontations of the same problem by scientists and other non-philosophers. Some give religious interpretations to the law and order in nature. Others seize upon the newly discovered disorder in nature as a basis for religious interpretation, implying an anti-intellectualism more sophisticated and destructive

- than Tennyson's. It is concluded that all such attempts are pointless without a starting-point in basic philosophical considerations.
- MILMED, Bella Kussy.** The Vitalist Trend And Thomas Wolfe. *Sewanee Review* 50,306-324 JI-S 42.
- The term "vitalism" is here used for the attitude that finds basic reality and supreme value in a romanticized version of life—life with its distinctive features pushed to extremes (e.g., growth is romanticized as expansiveness, will to power, ultimately destruction). This attitude is shown as the source of the most impressive features of Wolfe's writing. Its political implications are then traced in Whitman (undermining his glorification of democracy), Nietzsche, and the Nazis. It is argued that Wolfe's visit to Nazi Germany, revealing to him the disastrous line of development inherent in his own outlook, caused the changes apparent in his last works.
- MILO, Ronald Dmitri.** *Aristotle On Practical Knowledge And Weakness Of Will.* NY Humanities Pr 1967.
- MIN, Anselm K.** Hegel's Absolute: Transcendent Or Immanent? *Journal Of Religion* 56,61-87 Ja 76.
- The purpose of this article is to reexamine the much controverted issue of whether Hegel's Absolute is merely immanent or in some way also transcendent. The issue is approached by an attempt to review a number of contemporary interpretations on the subject in the light of the "speculative" or "dialectical" sense of such key concepts as "being," "finite-infinite," "necessity-freedom," and "love." The conclusion is that Hegel undercuts the very opposition between theism and atheism by positing the Absolute as the ontologically prior condition for the possibility of both infinity and finitude, both transcendence and immanence.
- MINADEO, Richard.** *The Lyre Of Science: Form And Meaning In Lucretius' 'De Rerum Natura'.* Detroit 1969.
- The great problem in understanding Lucretius's poem is how to fit together its art with its science. For without a harmony between the two, the poetic art is erratic in one way, apparently lacking unity, and the didactic content is erratic in another way, in being both Epicureanly cheerful and un-Epicureanly lugubrious. The author's solution is as follows: The theme of the poem is the cycle of life and death. This theme gives unity to the apparently disparate styles.
- MINAR JR, Edwin L.** Cosmic Periods In The Philosophy Of Empedocles. *Phronesis* 8,127-145 1963.
- MINAR, Edwin LeRoy.** *Early Pythagorean Politics In Practice And Theory.* Baltimore Waverly Pr 1942.
- Professor Minar's Monograph calls attention to the neglected phase of ancient political practice and thought. The Monograph begins with an account of Pythagoras and the foundation of the Society. Particularly valuable is the full description of the practical politics of the Pythagoreans and the Society's astonishing influence over numerous cities of the ancient world. It is clear from Professor Minar's book that Pythagorean political practice was conservative and aristocratic, with minor exception; the Society, in fact, gained virtual hegemony over an "empire" of cities, with the seat of "empire" at Croton.

- MINDEL, Joseph.** The Uses Of Metaphor: Henry Adams And The Symbols Of Science. *J Hist Ideas* 26,89-102 Ja-Mr 65.
- This is a study of Henry Adams' attempt to approach the study of history through science. Noting that Adams eventually rejected his own early theory of the philosophy of history, the author describes Adams' later view, particularly Adams' use of metaphor. He also analyzes Adams' central thesis, that in history as well as nature, all movement is downward, involving the dissipation of energy. Adams linked the study of history and science through a metaphoric link. The author concludes that this has been misunderstood by many of his critics, who fail to see the richness of his suggestions, and concentrate on the weakness of the details of his analysis.

- MISCHEL, Theodore.** Bad Art As The "Corruption Of Consciousness". *Phil Phenomenal Res* 21,390-396 Mr 61.
- R G Collingwood's account of bad art is an awareness of emotions which have been somehow falsified or corrupted. The author takes issue with this, and claims that it fails to provide an adequate criteria for distinguishing good art from bad art. The corruption of consciousness may happen in the process of artistic creation. What relevance does it have for deciding whether a product, the finished work of art, is good or bad? It may be that it implies unsuccessful expression, but not every unsuccessful expression implies a corruption of consciousness. Finally, there is no procedure by which anyone, not even the artist himself, can decide whether or not his consciousness is corrupt.

- Mish'alani argues that when someone thinks of the golden mountain, there is not anything of which he thinks (though he thinks of something). Further, it is incorrect to treat the golden mountain and other non-existents as things which differ from things like real mountains only in that, unlike real mountains, they do not exist. There is no mystery about thinking of something that does not exist, for this is just having a psychological attitude towards a false proposition.

- MOHANTY, Jitendranath.** *The Concept Of Intentionality.* St Louis Green 1972.
Answering the call for a greater rapprochement between eastern and western traditions, between the respective methods and vocabularies of phenomenological and analytical thinkers, the author has brought these divergent viewpoints together in his analysis of the concept of intentionality. His approach, though outwardly historical (surveying the twisting trail which the notion of intentionality has marked out since Brentano), is in fact more concerned with the problem of intentionality itself than with its history.

- MOLINA, Fernando.** *Existentialism As Philosophy.* Englewood Cliffs NJ Prentice-Hall 1962.
Existential aspects of the philosophies of Kierkegaard, Heidegger, and Sartre are the central concern of this study. The author tries to present existentialism in its technical rather than popularized form. Attention is given to some of the ideas of Nietzsche and Husserl insofar as they are relevant to existential philosophy. A chapter is also included on "Death and the Existentialists." The author interprets existentialism as "the systematic, often technical, exploration of the category of the individual." Among the topics explicated and examined are Kierkegaard's concept of the individual, Nietzsche's "overman," Husserl's phenomenological method, Heidegger's conception of "being in the world," and Sartre's theories of consciousness and self-deception.

- MOLNAR, Thomas.** *The Decline Of The Intellectual.* Cleveland World 1961.
An account of the intellectual's steady rise in power between 1300 and the French Revolution through his alliance with the bourgeoisie, his downfall produced by his own post-Revolutionary ideologies, and his displacement by the "social engineer." The cause of the decline was the erroneous philosophy of a universal secular society which has produced the "liberal trauma" of seeing the factors by which more freedom was to be achieved become the tools of a new obscurantism (State power, e.g.), and creation of an "ethico-social surreality" intended to take the place of reality itself (Utopianism). Chapters are devoted to the social engineer, and American and European intellectuals. The author concludes with a plea for a "rediscovery of philosophy" that would restore the intellectual's influence and integrity through a re-emphasis on man opposed to the collectivized body and mind, freedom opposed to the mechanization of inner and social life, and common sense opposed to faith in science.

In this book, consisting of three lectures on the Butterick Foundation in the Brooklyn Institute, a working biologist examines the belief in immortality, which, he contends, arose out of the unconscious memory possessed by all organisms of their biological pasts. Primitive societies and certain religions expressed this memory in myths of personal immortality. Modern man may find his hope of immortality in the widening circles of his influence, even after physical death.

- The phenomenalist's verifiability theory, that "cognitively meaningful statements of fact refer to those present and possible sense data which would be accepted as confirming or disconfirming the statement," is brought into question and examined by the author. He concludes by explaining that the new phenomenologists seek to avoid the pitfalls of the verifiability theory, but are overcome by the older associations of the term "phenomenalism."
- MOORE, Barrington (ed)** and Wolff, Kurt H (ed). *The Critical Spirit: Essays In Honor Of Herbert Marcuse*. Boston Beacon Pr 1967.
- The editors have brought together a number of essays written by twenty-five writers responding to major themes already treated in Marcuse's works or to challenges he has made central for others. The essays are written from independent points of view, sharing a common concern for issues and problems but not each other's proposed solutions. The essays are grouped in four parts as follows: 1) "The Political Concern of Philosophy," 2) "Art, Literature, and Society," 3) "Industrial Society and Its Plight," 4) "Marcuse as Teacher" and "Marcuse Bibliography."
- MOORE, Charles A (ed).** *Philosophy And Culture East And West: East-West Philosophy In Practical Perspective*. Honolulu Univ Of Hawaii Pr 1962.
- The general theme of the Conference was East West Philosophy in Practical Perspective, and the goal primarily was to achieve mutual understanding between the great cultures of East and West, and not to engage in critical analysis. Most of the emphasis was on the classical tradition rather than contemporary movements—especially Buddhism, Hinduism, Mohammedanism and Confucianism. Among the topics discussed were the Relation of Philosophical Theories to Practical Affairs; Natural Science and Technology in Relation to Cultural Institutions and Social Practice; Religion and Spiritual Values; Ethics and Social Practice; Legal, Political and Economic Philosophy; Conspectus of Practical Implications for World Understanding and Cooperation.
- MOORE, Charles A (ed).** *The Status Of The Individual In East And West*. Honolulu Univ Of Hawaii Pr 1968.
- MOORE, Charles A (ed)** and Morris, Aldyth V (ed). *The Indian Mind*. Honolulu 1967.
- This volume, presents a middle-of-the-road explanation of the Indian mind.
- MOORE, Charles A (ed)** and Morris, Aldyth V (ed). *The Japanese Mind*. Honolulu 1967.
- The major topics discussed are Buddhism, Shintō, cultural traits and legal, political, and economic thought. Opening the book is Miyamoto Shosōn's "The Relation of Philosophical Theory to Practical Affairs in Japan." This and other essays are most useful in describing the development of Japanese religious thought in the past twelve centuries.
- MOORE, Charles A.** Cohen On The Rôle Of Philosophy In Culture. *Phil East West* 5,113-124 JI 55.
- MOORE, Charles A.** Keys To Comparative Philosophy. *Phil East West* 2,76-78 Ap 52.
- MOORE, Charles Alexander (ed).** *Essays In East-West Philosophy; An Attempt At World Philosophical Synthesis*. Honolulu Univ Of Hawaii Pr 1951.
- This volume fulfills the dual role of recording the formal papers presented at the Second East-West Philosopher's Conference held in 1949 and at the same time provides an unusually lucid and comprehensive summary of many of the root principles and systems in historical and contemporary Oriental philosophy. Numerous western philosophers point out some of the similarities and contrasts between Eastern and Western philosophy. In an introduction and a final chapter, C A Moore introduces this attempt at philosophical synthesis and summarizes the results of the conference.
- MOORE, Charles Alexander (ed)** and Morris, Aldyth V (ed). *The Chinese Mind: Essentials Of Chinese Philosophy And Culture*. Honolulu 1967.
- This is a collection of seventeen papers on Chinese philosophy presented at the Four East-West Philosophers' Conferences from 1949-64. Many of the authors also show some signs of their American training, the greatest impact on them having been pragmatism. Most of the writers also show a strong bent towards individualistic humanism. The most philosophically technical and least-known to the general reader are possibly the following papers: E R Hughes, "Epistemological Methods in Chinese Philosophy," Hu Shih, "The Scientific Spirit and Method in Chinese Philosophy," and Thome H Fang "The World and the Individual in Chinese Metaphysics."
- MOORE, Charles A.** Philosophy As Distinct From Religion In India. *Phil East West* 11,3-26 Ap-JI 61.

- MOORE, Charles A.** Some Problems Of Comparative Philosophy. *Phil East West* 1,67-70 Ap 51.
- MOORE, Dale H.** Freud And Religion. *Personalist* 22,169-173 Ap-Spr 41.
- MOORE, Edward C (ed)** and Robin, Richard S (ed). *Studies In The Philosophy Of Charles Sanders Peirce, Second Series*. Amherst Univ Of Mass Pr 1964.
- The following topics are discussed. I Biographical and Historical, II Logic, Probability, and Induction, III Perception, Belief, and Pragmatism, IV Normative Science, Final Causation, and Evolution, V Scientific Metaphysics, Realism, and the Categories.
- MOORE, Edward C.** *American Pragmatism: Peirce, James, And Dewey*. NY Columbia Univ Pr 1961.
- As the title of the book indicates, this study covers the essential doctrines of the three great representatives of American pragmatism: Peirce, James, and Dewey. From Peirce's teachings, the author singles out theory of knowledge, theory of reality and the status of "Laws" for special treatment; in James's philosophy, he focuses on philosophy of religion and theory of truth; and from Dewey's doctrines he selects theory of inquiry, ethics, and theory of reality or naturalism as basic. The treatment of these men is on an advanced level and the analysis of their doctrines is thorough and logically presented. The book could serve not only as a text for advanced students in philosophy but also as reading for the philosophically literate public.

MOORE, J T. Alfarabi On The Meaning Of Philosophy. *Mod Sch* 42,179–192 Ja 65. Contrary to some scholarly opinion, the ninth-century Arab philosopher Alfarabi draws a sharp distinction between philosophy and religion and places the latter in a position of subservience to the former. It is also argued that his general point of view is Platonic rather than Aristotelian, that ultimately philosophy has meaning only in social and political activity, with the philosopher having the role of king (IMAM). The argument for these conclusions is based on the analysis of his work *The Philosophy of Plato and Aristotle*.

MOORE, J T. Hegel's Concept Of Individual Freedom. *Ball State Univ Forum* 15,31–37 Sum 74.

Hegel's concept of the individual as social, historical, and universal in nature is contrasted to and defended against the theory of individualism which began with the American and French Revolutions and which continues in our time. The freedom of individuals, on Hegel's view, comes only in the realization of and participation in the objective and universal reason and reality of society and state through which the freedom of one becomes the condition for the freedom of all.

MOORE, Omar K and Anderson, Alan R. Some Puzzling Aspects Of Social Interaction. *Rev Metaph* 15,409–433 Mr 62.

After considering the differences between interactional models (games) and noninteractional models (puzzles), the authors argue that the attempt to apply the descriptive mathematical methods appropriate to the latter is out of place in the social sciences, and that a principal characteristic distinguishing group sociology from individual psychology is the concept of self-consciously formulating and following social rules.

MOORE, Omar Khayyam and Anderson, Alan Ross. The Structure Of Personality. *Rev Metaph* 16,212–236 D 62.

The authors examine four autotelic folk-models, namely, puzzles, games of change, games of strategy, and aesthetic objects, in order to gain insights into the structure of human personality. They conclude that there are at least six functional parts to a fully developed human personality: a "date-tape," which processes information; four systems of perspectives, including those of agent, patient, social reciprocity, and umpire; and a system of emotions. In-coming information is, they maintain, routed through each perspective and checked against the emotional system.

MOORE, Omar Khayyam. Nominal Definitions Of 'Culture'. *Phil Sci* 19,245–256 O 52.

MOORE, Stanley W. *The Critique Of Capitalist Democracy, An Introduction To The Theory Of The State In Marx, Engels, And Lenin*. NY Paine Whitman 1957.

The author attempts a systematic exposition, not a critique, of the political theories, of Marx, Engels, and Lenin, and a large part of the text is composed of quotations from their works. The chief topics are: dictatorship, capitalist exploitation, capitalism and democracy, ideology and alienation.

MORA, José Ferrater. On The Early History Of 'Ontology'. *Phil Phenomenol Res* 24,36–47 S 63.

The author studies Kant's rejection of Wolff and Baumgarten. Kant felt that ontology was a pseudo science and a temptation. The author examines what Kant had in mind when he decided to overthrow the ambitious projects of rational ontologists. It is held that one must understand the concept of ontology and its origins, in order to clarify the thinking of Kant.

MORANDO, Dante. Education: Meditation/Contemplation/Recollection. *Phil Today* 3,94–109 Sum 59.

MORANO, Donald Victor. *Existential Guilt: A Phenomenological Study*. NY Humanities Pr 1973.

Through imaginary variation in which I reflected upon diverse literary and historical figures, such as Oedipus, Macbeth, Adolf Eichmann, and Dimmesdale, I searched for the invariant ontological structure of guilt: man is finite. However, although he is finite, his powers of reflection and imagination enable him to grasp what it means to be infinite. Therefore, noetic and moral tensions—tensions of thought and action—result from the appreciation of man's actual mode of existence and what he would like it to be. Hence, man's guilt is the result of his straddling of two worlds—the actual and the ideal.

MORAVCSIK, J M E (ed) and Suppes, P (ed) and Hintikka, K J J (ed). *Approaches To Natural Language*. Boston Reidel 1973.

The papers are arranged under three sub-titles, viz. Grammar, Semantics, and Special Topics. Part I on Grammar contains papers on stress, phonology, syntax, transformational grammars, and the like. Part II on Semantics contains, among other things, papers on the relations between grammar and logic, on quantification in ordinary English, on mass terms in English, and on belief sentences. Special topics treated in Part III are topicalization and self-reference. Some papers in parts II and III are followed by special comments. The volume contains 27 essays.

MORAVCSIK, J M E. The 'Third Man' Argument And Plato's Theory Of Forms. *Phronesis* 8,50–62 1963.

MORAVCSIK, J M E. The Analytic And The Nonempirical. *J Phil* 62,415–428 Ag 65.

In surveying recent attempts to clarify "analytic" it is pointed out that the formula "x is analytic if it is true in virtue of the meanings of its constituents" is unintelligible by the substitution of either 'proposition' or 'sentence' for 'x'. Against Donnellan it is urged that non-detachable predication relates only determinates and determinables, not species and genera. Against Putnam it is argued that there are no one-criterion terms, and against Quine it is urged that one cannot both deny the existence of a priori propositions and maintain the unintelligibility of the a priori-empirical distinction. Constructively, it is argued that there is a variety of non-empirical propositions and that within this we can locate some philosophic propositions. The traditional notion of analyticity is regarded as a cluster-concept in which not all of the parts entail each other.

MORAWETZ, Thomas H. The Relevance Of Responsibility. *Yale Law Journal* 85,447–453 Ja 76.

In this article I review and discuss Alf Ross's book *On Guilt, Responsibility and Punishment*. Ross argues that suggestions that legal practices ought to dispense with assumptions about guilt and responsibility in the treatment of criminal offenders are not only impractical but theoretically impracticable. I try to elicit and defend the philosophical bases in philosophy of mind of Ross's arguments. I also criticize parts of his argument which are grounded in logical positivism.

MORAWETZ, Thomas H. The Rules Of Law And The Point Of Law. *University Of Penn Law Review* 121,859–873 Ap 73.

In this article I evaluate Ronald Dworkin's criticisms of H L A Hart's *Concept Of Law* indirectly, by asking first what would count in a very general way as a satisfactory analysis of a rule-structured activity like law. I criticize some uses of the model of games for studying and show how Hart is vulnerable to such criticisms. I argue that references to the point or purposes of law play a special role in a discussion of the "concept" of law and that Hart's positivistic analysis may be reconcilable with Dworkin's criticisms.

MORAWSKI, Stefan. *Inquiries Into The Fundamentals Of Aesthetics*. Cambridge MA MIT Pr 1974.

The essays comprising this volume offer a systematic exposition of the author's Marxist approach to basic problems in aesthetics. They are arranged in three parts. Part I examines the axiological issues in the light of a typology of theories of artistic value and aims at establishing criteria of evaluation by making evident the grounds for defining works of art. Part II deals with the general theme of artistic-cognitive values through an examination of the concepts of expression and mimesis and a

- defense of socialist realism. Part III focuses on the genesis and functioning of artistic values and presents a fresh analysis of the problems of alienation and also the broader issues related to values and the criteria for their determination.

- MORGAN, Barbara Spofford.** *Skeptic's Search For God.* NY Harper 1947.
- MORGAN, Douglas N.** *Love: Plato, The Bible And Freud.* Englewood Cliffs NJ Prentice-Hall 1964.
- Morgan explains three philosophies of love. For Plato love is the creative force in the world. It is a lack striving towards beauty in various forms—attractive objects, moral actions, enlightening concepts, and finally the essence of Beauty. By love man returns to the world of ideals he knew before birth. According to the Bible God created the world in an act of spontaneous love. From love of man God set up the moral law, and man ought to love his Creator through obedience. The fatherhood of God became incarnate in Jesus and remains a saving force to help man towards this perfect love. Freudian love is conceived in purely natural terms as an instinct of the organism. Love is always erotic, but sexuality is construed very widely. Maturation is a growth in love whereby the child learns through the frustration of conflicting desires and the internalization of the approvals and disapprovals of his parents.

- MORGAN, Morris J.** Bases Of Realism. *Phil Forum (Boston)* 3,6–12 Spr 45.
- MORGAN, William S.** *The Philosophy Of Religion: A Consideration Of The More Profound Aspects Of Religious Thought.* NY Philosophical Lib 1950.
- There are five general subdivisions of the material as the author presents it. The first part is concerned with the nature of philosophy and religion. The attitude of philosophy is defined and a definition of religion given. Part two is concerned with the problem of knowing reality, and here a chapter is devoted to Kant's solution of the problem of knowledge and another to Green's metaphysical principle. Part three deals with ultimate reality interpreted as a unifying and causal principle. Part four discusses ultimate reality interpreted as an ethical and aesthetic principle while the concluding portion of the book treats of this same ultimate reality in relation to the phenomena of the religious life and the destiny of man. A "Conclusion to the Argument of This Treatise" neatly sums up the author's position and in short space encompasses a valuable contribution to the study of philosophy of religion.
- MORGENBESSER, Sidney (ed).** *Philosophy Of Science Today.* NY Basic Books 1967.
- This volume is a collection of informal and highly readable essays by sixteen eminent philosophers and logicians. Though the essays are well-chosen to range over the most significant issues in the philosophy of science, they are unencumbered by technical notation, jargon, footnotes or bibliography. The volume falls, after an opening essay by E Nagel, into three clusters of essays. There are first three essays by Henkin and Kleene on the concepts and issues of mathematical logic. Then come seven essays analyzing concepts that are involved in all scientific thought: Quine on necessary truth, Suppes on theory, Goodman on simplicity, Hempel on explanation, Hanson on observation and interpretation, Putnam on probability and confirmation, and I Levi on hypotheses. Finally, there are six essays on the character of scientific argument, either in general or in specific corners of scientific inquiry. Throughout the volume, except perhaps in the first cluster of essays, one is given the impression that the issues, far from being cut and dried, are still lively and subject to further clarification.

- MORLEY, Felix (ed).** *Essays In Individuality.* Philadelphia Univ Of Penn Pr 1958.
- The twelve essays are all concerned with the problem of man's freedom in a world tending more and more to socialization and regimentation of the thought and action of individuals. The writers are accomplished in various fields of inquiry: history, economics, natural science, philosophy, sociology, literature, and politics.
- MORNET, Daniel.** L'Idée De Préciosité En France Au XVIIe Siècle. *J Hist Ideas* 1,225–231 Ap 40.
- MORRILL, Thomas** and Forest, Herman S. Biological Expansion—Perspective On Evolution. *Monist* 48,291–305 Jl 64.
- By means of the notion of "biological expansion" the article discusses inadequacies of some current views, concepts and dichotomies having to do with evolution. It stresses and gives evidence that evolution is not simply a defensive process, but is one created—not simply by genes—rather by the organism itself. Biological expansion revives the notion of human self-determination in the face of physical, biological and cultural forces. "Life is not merely the struggle to exist; it is the struggle to evolve."
- MORRIS- JONES, H.** The Logic Of Criticism. *Monist* 50,213–221 Ap 66.
- The article rejects the view that the relation between descriptions and evaluations in art criticism is either wholly deductive or causal. It rejects the former because

- evaluation is not a necessary inference from description. It rejects the latter because it would make evaluation equivalent to an admission of personal liking and hence incorrigible. It is argued that criticism is rational inasmuch as an evaluation is an appraisal and this is a submission which is corrigible. The question therefore turns on the criteria for reasons on which appraisals can be based which are relevant and adequate. It argues for establishing procedural rules for such norms. In this dual relationship there are both logical and causal connections. Our concept of art is causally affected by our aesthetic experiences and the vocabulary we use in articulating those experiences arises out of the concept of art which affects our aesthetic discrimination.
- MORRIS, Aldyth V (ed)** and Moore, Charles A (ed). *The Indian Mind*. Honolulu 1967.
- This volume, presents a middle-of-the-road explanation of the Indian mind.
- MORRIS, Aldyth V (ed)** and Moore, Charles A (ed). *The Japanese Mind*. Honolulu 1967.
- The major topics discussed are Buddhism, Shintō, cultural traits and legal, political, and economic thought. Opening the book is Miyamoto Shosōn's "The Relation of Philosophical Theory to Practical Affairs in Japan." This and other essays are most useful in describing the development of Japanese religious thought in the past twelve centuries.
- MORRIS, Aldyth V (ed)** and Moore, Charles Alexander (ed). *The Chinese Mind: Essentials Of Chinese Philosophy And Culture*. Honolulu 1967.
- This is a collection of seventeen papers on Chinese philosophy presented at the Four East-West Philosophers' Conferences from 1949-64. Many of the authors also show some signs of their American training, the greatest impact on them having been pragmatism. Most of the writers also show a strong bent towards individualistic humanism. The most philosophically technical and least-known to the general reader are possibly the following papers: E R Hughes, "Epistemological Methods in Chinese Philosophy," Hu Shih, "The Scientific Spirit and Method in Chinese Philosophy," and Thome H Fang "The World and the Individual in Chinese Metaphysics."
- MORRIS, Bertram And Others**. *Studies, Series In Philosophy, No I: Studies In Ethical Theory*. Boulder 1958.
- This book contains the following articles on a variety of ethical questions: "Ethics and Human Nature," "Human Nature and Ethics," "Philosophical Ethics and Morality," "On the Justification of Ought-Statements," "Ethics and Ethical Experience," "The Need for Sound Type-Theory in Ethical Inquiry," "Human Nature, Science, and Philosophy," "What is Truth About Man?"
- MORRIS, Bertram**. *Philosophical Aspects Of Culture*. Yellow Springs, OH Antioch Pr 1961.
- The author is concerned with the nature of cultures and cultural institutions as both expressions and determinants of human values. An attempt is made to interpret various attitudes toward contemporary life, to describe the major aspects of modern conflicts, and to indicate the kinds of methods which give hope that a humane solution to mankind's problems can be achieved. The author calls his point of view "functionalism," and says that it is utilitarian in that it is much concerned with questions of health, housing, social security, etc., and humanitarian in that it "means to respect the human impulses which lead men to invent, to love, to laugh, to question, and to think." His conclusions are based on a synthesis of materials from anthropology, sociology, political science, and aesthetics.
- MORRIS, Bertram**. *The Aesthetic Process*. Evanston IL Northwestern Univ 1943.
- Chapter I defines The Aesthetic Attitude as a "continuum of culminating activities, which import the earlier into the later," and these activities are "immediately felt" experiential processes. Chapter II correspondingly defines the aesthetic object as feeling processes coming to rest in totality and unity. The art-object turns out to be "satisfied imagination," in Chapter III, whereas the aesthetic attitude has turned out to be aesthetic object. "The fundamental identity of creation and appreciation" thus achieved is the theme of Chapter IV, Aesthetic Purpose; it is "simply determinate feeling, which in turn is perception or satisfied imagination." Chapter V, On Kinds of Beauty, shows that material beauty is inseparable from its forms of rhyme and rhythm, and both are inseparable from their culmination in the aesthetic whole of satisfied imagination.

- MORRIS, Bertram**. Intention And Fulfilment In Art. *Phil Phenomenol Res* 1,127-153 D 40.
- MORRIS, Bertram**. Obligation: Sensical Or Nonsensical? *Phil Phenomenol Res* 11,525-534 Je 51.
- MORRIS, Bertram**. Philosophy Of Criticism. *Phil Rev* 55,611-633 N 46.
- MORRIS, Bertram**. Possessive Individualism And Political Realities. *Ethics* 75,207-214 Ap 65.
- In *The Political Theory of Possessive Individualism*, C B MacPherson interprets Harrington, the Levellers, Locke, and Hobbes as developing political theories to suit the rise of bourgeois capitalism and its market society. His discussion of Hobbes fails to prove that in Hobbes's civil society only the values of a market society are recognized or that the inequalities within civil societies were believed by Hobbes to be due to operation of the market. His discussion of Locke furthermore ignores the fact that Locke thought all men should and can be property holders, within limits of accumulation.
- MORRIS, Bertram**. Quality, Physicalism, And The Material Mode. *Phil Rev* 50,64-73 Ja 41.
- MORRIS, Bertram**. Ruskin On The Pathetic Fallacy, Or How A Moral Theory Of Art May Fail. *J Aes Art Crit* 14,248-266 D 55.
- MORRIS, Bertram**. The Dignity Of Man. *Ethics* 57,57-64 O 46.
- MORRIS, Bertram**. The Principle Of Sufficient Agreement. *Phil Phenomenol Res* 25,1-15 S 64.
- This essay views ethics as involving two inter-dependent principles of civil life: utility and sociality. The first relates man to nature and depends on knowledge; the second relates man to man and depends on agreement. The stimulus to reach agreements derives from outstanding disagreements. Civil life supposes that there is always a good and sufficient reason why persons should compose their differences as civil beings rather than to magnify them into irreconcilable hostilities, even if the latter are sometimes unavoidable. One cannot expect to live in the world and fashion it to his dreams; but because the arts can provide in social affairs both utility and beauty, one can expect to live in it and with others with both effect and elegance.
- MORRIS, Bertram**. The Role Of The 'Standard Mind' In Art. *J Aes Art Crit* 4,239-244 Je 46.
- MORRIS, Charles W**. *The Pragmatic Movement In American Philosophy*. NY Braziller 1970.
- The brevity of this abstract is an indication of Charles Morris' precision of simple purpose and clarity of organization in *The Pragmatic Movement in American Philosophy*. The book deals with the thought of Charles Sanders Peirce, William James, John Dewey and George Herbert Mead. The aim is to extract the essence of pragmatism in terms of its unity as a movement, rather than comparing the four figures as individuals or competing contributors sharing a common ground. Charles Morris writes not as a historian or interpreter but as a participant within American pragmatic philosophy.
- MORRIS, Charles William**. *Signs, Language And Behavior*. NY Prentice-Hall 1946.
- MORRIS, Charles**. *Signification And Significance: A Study Of The Relations Of Signs And Values*. Cambridge MA MIT Pr 1964.
- This volume is intended to provide a framework for viewing certain matters, rather than a comprehensive or detailed account. For many years Morris' work has been concerned with the development of a general theory of value and a general theory of signs. Morris approached both areas in a manner heavily influenced by George H Mead's theory of action. The present book is an attempt to synthesize the two major strands of Morris' earlier efforts. He investigates and emphasizes the nature of signification and significance and their relations within human behavior. Morris has made some important modifications in his earlier views, and he also presents material in the present book not discussed in his previous books.
- MORRIS, Charles**. *Varieties Of Human Value*. Chicago Univ Of Chicago Pr 1956.
- This book is presented as a scientific study of values, mainly concerned with "conceived" values, "those cases of preferential behavior directed by an 'anticipation or foresight of the outcome' of such behavior," rather than with "operative" and "object" values. The "conceived values" here examined are conceptions of the good life derived from students' ratings of thirteen "Ways to Live." The students' preferences for these "Ways" were subjected to statistical analysis, the results of which were used to provide support for the conclusions reached.
- MORRIS, Charles**. A Rhetoric Of Motives. *Rev Metaph* 4,439-444 Mr 51.
- MORRIS, Charles** and Hamilton, Daniel J. *Aesthetics, Signs, And Icons*. *Phil Phenomenol Res* 25,356-364 Mr 65.
- This article reviews the main discussions and criticisms occasioned by the paper of Charles Morris, "Esthetics and the Theory of Signs." This paper had suggested that the work of art was an iconic sign signifying the value which, as iconic, it embodied in itself as sign-vehicle. The theory of signs was considered the proper metalanguage for aesthetics. The present article displays criticisms of this view: that the work of art is not a sign; that the treatment of the iconic sign raises a number of problems; that semiotic has at best a limited value for aesthetics.

- MORRIS, Charles**. Varieties Of Human Value. *Humanist* 16,153-161 Ag 56.
- MORRIS, Herbert**. Punishment For Thoughts. *Monist* 49,342-376 Jl 65.
- Morris offers an interpretation of the formula "Law is concerned with external conduct, morality with internal conduct" in light of obvious objections to it. He examines one limited aspect of that formula and offers a defense of that limited aspect by analyzing the term "external conduct" and positing an imaginary system in which all rules prohibit intentions to do harmful things and where our air in making intentions criminal is to diminish harmful occurrences.
- MORRIS, John M**. A Computer-Assisted Study Of A Philosophical Text. *Computers And The Humanities* 3,175-178 Ja 69.
- The use of computer-prepared indexes in the study of the works of Descartes made available a wealth of information for several scholarly studies of Descartes' works.

Concordances to the Meditations and the Discourse were prepared, and an index of significant passages was also developed.

- MORRIS, John M.** Pattern Recognition In Descartes' Automata. *Isis* 60,451-460 1969. In his Treatise on Man (1632) Rene Descartes develops an explanation of the way in which an automaton might recognize and respond to patterns in its sensory data. This explanation underlies the theory of memory that appears in Descartes' major works. It is also related to his account of innate ideas and to his theory of error. As his later letters show, however, Descartes did not find this purely physical theory of pattern recognition adequate to explain human memory. He seemed to need a theory of a purely "intellectual" memory, which could not be simulated by an automaton.
- MORRIS, John.** Sartre's Existentialist "Humanism". *Humanist* 22,146-151 S-O 62.
- MORRIS, Lloyd.** William James: The Message Of A Modern Mind. NY Scribner 1950. This work is designed to state in brief compass the message, significance and influence of some of the leading philosophic and literary figures of this century. Here we find an exposition of James's psychology, his pragmatism, radical empiricism, ethics, politics and philosophy of religion. The concluding chapter shows his influence upon Woodrow Wilson, Franklin Roosevelt, Justice Holmes and Justice Brandeis as well as some of the perversions of his views by fascism and religious fanaticisms.
- MORRIS, Maxwell H.** Toward A Naturalistic Ethic. *Humanist World Digest* 42,14,15,18 Sum 69. Certain factors are necessarily relevant to any naturalistic ethic. (1) Nature is a unified system. (2) Man is subject to animal drives, (3) and dare not upset balance of nature too far. (4) He must observe these statistical regularities: (a) Law of survival, (b) Law of entropy, (c) Law of change, (d) Third law of thermodynamics. Any action endangering cosmic regularity or the evolutionary process is an absolute wrong.
- MORRIS, Phyllis S.** The Laughing Lion: Nietzsche's Vision Of The Overman. *Humanities Review* 15 Autumn 61. The article argues against the common view that Nietzsche is a nihilist. Rather, Nietzsche attacks a particular view of God, and certain destructive consequences of traditional religious morality. Zarathustra envisages an 'overman' who can create new values after struggling against the older ones. His vision of prouder, stronger, wiser, more joyous men is explored through his animal symbolism.

- MORROW, Glenn R.** Plato's Cretan City; A Historical Interpretation Of The Laws. Princeton NJ Princeton Univ Pr 1960. This is a study of the greatest importance to Greek cultural history and Platonic scholarship. With thorough scholarship and great sensitivity to the issues of law, moral philosophy, and politics, the author presents a detailed study of Plato's *Laws*. The emphasis is on the legal and political rather than the metaphysical. The first three chapters discuss the constitutions of Crete, Sparta, and Athens. The influence of each on Plato's views of the polis and legislation is made clear. Then the specific institutions of the *Laws* are discussed. Property and the family, government,

administration of justice, education, religion, the Nocturnal Council, are the topics for close analysis in chapters four through nine. Chapters ten through twelve discuss the mixed constitution, the rule of law, and the rule of philosophy. Full indexes are included, and the footnotes constitute an invaluable bibliography of recent scholarship.

- MORTIMER, Adler J.** The Idea Of Freedom, V2: A Dialectical Examination Of The Controversies About Freedom. Garden City NY Doubleday 1961. In keeping with the original plan of publication, this volume continues the evidence amassed and summarized in a volume I, by way of a confrontation and comparison of the issues at stake. The purpose of this volume is to present in close array the whole range of arguments for and against every possible position on an issue of freedom, and to classify every author of merit by those arguments. Five forms of freedom are distinguished and discussed. Self-realization acquired in favorable circumstances; self-perfection acquired through achievement or wisdom; the inherent power of self-determination exercised by all men; political liberty arising from held rights; collective freedom (of groups or the race) which directs the future; presumably no one accepts or denies all five of these, and every thinkable author is classified as to whether he holds to one, two, three, or four of them. An enormous amount of material has been digested and organized here.

- MOSER, S.** Utilitarian Theories Of Punishment And Moral Judgments. *Phil Stud* 8,15-18 1957. This article goes into Stevenson's view that insofar as our attitude toward punishment is utilitarian, we consider ourselves justified in inflicting a particular kind of punishment only if we think that this judgment will fulfill a deterrent or reformatory function. The author argues that Stevenson's account entirely ignores the distinction between moral judgments that are expressed and communicated and those which are merely entertained in our mind without receiving any outward expression. He argues further that we cannot decide to accept or reject a certain judgment, e.g., the judgment that somebody is guilty of a crime. Thus we cannot make our moral beliefs dependent on the purpose they may serve.

- MOTHERSILL, Mary (ed).** *Ethics*. NY Macmillan 1965.
- MOTHERSILL, Mary.** "Unique" As An Aesthetic Predicate. *J Phil* 58,421-436 Ag 61.
- The author sets out to explore the familiar claim that every work of art is unique. This claim, she notes, is most important to proponents of the expression theory and the autonomy theory. On some interpretations, she argues, this assertion is true and on other interpretations (such as Hampshire's) it is interesting, but on no interpretation is it both true and interesting.
- MOTHERSILL, Mary.** Anscombe's Account Of The Practical Syllogism. *Phil Rev* 71,448-461 O 62.
- Mothersill discusses the second half of Anscombe's *Intention*, criticizing her attacks on modern interpreters of Aristotle on the practical syllogism. Anscombe's positive thesis is helpful in suggesting that a practical syllogism is not a kind of argument but a schema of logically necessary conditions for intentional action.
- MOTHERSILL, Mary.** C I Lewis: Hedonistic Ethics On A Kantian Model. *Phil Stud* 5,81-87 1954.
- MOTHERSILL, Mary.** Is Art A Language? *J Phil* 62,559-571 O 65.
- The article investigates E H Gombrich's thesis that "Everything points to the conclusion that the phrase 'the language of art' is more than a loose metaphor." This thesis is often assumed by philosophers. What is hard to find is any systematic attempt to make clear what it would mean for art to be a language. The author summarizes various such attempts, and concludes that the phrase 'the language of art' is a mere metaphor and not much is to be gained by pursuing analogies between art and language.
- MOTHERSILL, Mary.** Moral Knowledge. *J Phil* 56,755-762 S 59.

- MOTT, Omer.** Utility As The Norm Of Law. *New Scholas* 15,377-390 O 41.
- MOTTO, Anna Lydia.** *Seneca*. NY Twayne 1973.
- This reassessment of Seneca's life and work defends the Stoic philosopher-statesman against his most important critics, both ancient and modern. It challenges the charge of personal hypocrisy in his scolding wealth while acquiring it, and emphasizes the ironic art and wit in his literary inconsistencies. His bloody tragedies, while inferior by Greek standards, ought to be judged by other criteria, as they are artistically closer to Pindaric odes, to declamations, to elegiac laments. He was a vocal humanitarian in a brutal age, and even his scientific studies are given an ethical turn. Nearly a quarter of the volume is devoted to chronology, notes, references, bibliography, and index.

- MOULYN, Adrian C.** *Structure, Function And Purpose: An Inquiry Into The Concepts And Methods Of Biology From The Viewpoint Of Time*. NY Liberal Arts Pr 1957.
- Writing as a philosopher, yet drawing on his studies of biology and psychology, Dr Moulyn attempts to illuminate the meaning of the concepts "structure," "function," "causality" and "purpose." He challenges the prevalent idea that spatial, organic structures are purposeful. Distinguishing between "objective" and "subjective time" he argues that purpose and teleology are established on the basis of "subjective time" and are found only in higher animals and human life. Only man, however, can integrate "objective" and "subjective time." This suggests a "dualistic" and anti-mechanistic account of human behavior.

- MOURELATOS, Alexander P D.** *The Route Of Parmenides: A Study Of Word, Image, And Argument In The Fragments*. New Haven Yale Univ Pr 1970.
- Mourelatos finds Parmenides in the epic tradition, and assesses favorably the poetic value of his work. Parmenides, like Hesiod in *Works and Days*, uses the motif of instruction; like Homer in the *Odyssey*, he describes a journey. The opening statement of *Aletheia* represents two routes; B6-7 indicates another, which, however turns into the negative path. The quest motif unites the poem's parts: *Aletheia* is staying on course; *Doxa*, straying away. Pursuing truth is obligatory.
- MOURELATOS, Alexander P D.** The Real, Appearances And Human Error In Early Greek Philosophy. *Rev Metaph* 19,346-365 D 65.
- The author's purpose is to explain how and why early Greek philosophers came to regard the familiar sensible world as unreal, a world of mere appearances. As a logical and roughly historical framework, he offers a three stage schema which, he claims, will aid both in studying the pre-Socratics and in comparing pre-Socratic and post-Cartesian thought. He illustrates his thesis by reference to Homeric thought, Xenophanes, Anaximenes, Melissus, Parmenides, Empedocles, Anaxagoras, and Democritus.

- This book touches on a number of diverse topics: from the origin of space and time, relativity, quantum electrodynamics, entropy, and cosmological cycle to immortality and value. It presents a theory of "dialectical atomism" which is supposed to tie everything together.
- MUELDER, Walter G.** *Foundations Of The Responsible Society: A Comprehensive Survey Of Christian Social Ethics*. NY Abingdon Pr 1959.
- The Dean of the Boston University School of Theology presents a survey of Christian social ethics unified by the idea of "the responsible society" as this has been developed through a series of church conferences in America and in the ecumenical movement throughout the world. The responsible society is clearly internationalist; the most unequivocal demand in the book is that "the church must completely repudiate the use and testing of H-bombs and that... all such power must be assigned to the UN." On other topics of social concern (the family, labor and management, agricultural policy, social welfare legislation, and so on) the demand of the

- responsible society is less clear; the conflicting claims of freedom, equality and justice seem all to be recognized as normative but hardly to be reconciled.

- MUELLER, Gustav Emil.** *Origins And Dimensions Of Philosophy: Some Correlations*. NY Pagent Pr 1965.
- The subtitle of this work, "Some Correlations," explains why the treatment of each topic is eclectic rather than comprehensive or balanced. The four parts of the work deal, respectively, with systematic philosophy, the crisis of Christianity, ethics, and aesthetics. The aspects chosen for discussion under systematic philosophy are the logic of philosophy; "creation, evolution and emanation"; Pascal's existential dialectic; the development of dialectic from Kant to Hegel; and "Husserl's rediscovery of systematic philosophy." The part devoted to aesthetics concludes with a chapter on philosophy in the twentieth-century American novel.
- MUELLER, Gustav Emil.** *Philosophy Of Literature*. NY Philosophical Lib 1948.
- MUELLER, Gustav Emil.** *Plato, The Founder Of Philosophy As Dialectic*. NY Philosophical Lib 1965.
- This book is an exposition of the underlying unity of plato's philosophy, conceived as Hegelian dialectic. This unity is found in a four-step dialectic of reality, knowledge, and of value, culminating in an Absolute in which opposites are reconciled without being lost. After a preliminary statement of this position, it is illustrated by a dialectical exegesis of four or five dialogues. The book is not intended for scholars but is written on a level appropriate for beginners, which makes it unfortunate that the canons of scholarship are violated so regularly.
- MUELLER, Gustav Emil.** *The World As Spectacle: An Aesthetic View Of Philosophy*. NY Philosophical Lib 1944.
- This book is an autobiographical sketch, the outlines of an idealistic philosophy of art, and an interpretation of life and world are combined into an "aesthetic introduction to philosophy." Since the distinction between art and analysis of art is not insisted upon, a semi-artistic form of exposition suits the purpose of the author, and the gusto with which he imparts his views and experiences may prove contagious with the reader.

- MUELLER, Iris Wessel.** *John Stuart Mill And French Thought*. Urbana 1956.
- John Stuart Mill "began a journey to France just five days before his fourteenth birthday," and "in some ways the journey did not end until he was buried in Avignon fifty-three years later...." The Revolution of 1830 jolted his "long-held Benthamite attitudes about the role of government and the free operation of self-interest," and prepared his mind for the anti-liberal but positive teachings of the Saint-Simonians and Comte, which almost carried him to the extreme of "over-government." But Mill was too good a democrat to accept an all-powerful oligarchy of the intellectual elite. Then came the cautions of Alexis de Tocqueville against the possible excesses of the democratic majority, and Mill was forced to seek a compromise that would rescue freedom from both sorts of dangers. He was aiding in finding it by the more democratic socialists of 1848, who convinced him "that an economic reorganization of society did not necessarily entail a political despotism of an intellectual elite."

- MUKERJEE, Radhakamal.** Homeostasis, Society, And Values. *Phil Phenomenol Res* 27,74-79 S 66.
- Homeostasis implies maintenance and improvement of stability of the organism, revealing the potentialities of life in its different dimensions. The concept of values is derived from the basic homeostatic functions of self-maintenance, control and directiveness towards dynamic equilibrium. In evolutionary progress the fields of life rise to greater complexity and higher dimensions, including not simply man but the society, culture, and mankind-as-a-whole. Groups, societies, and cultures develop ever more integrated values, "wholes," or homeostatic systems of organized relations, behavior, and values, in and with reference to which individual goals, purposes, and obligations arise and are integrated and ordered in a system of "natural" hierarchy.
- MUKERJEE, Radhakamal.** Morals, The Art Of Symbolic Living. *J Phil* 47,453-464 Ag 50.
- The evolution of man's mental life is discussed in terms of two dimensions: the physical and biological plane of experience, and the secondary symbolic environment. The latter is treated extensively by the author, with an emphasis in treating values and moral judgements within the context of symbolic interpretation.

- MUMFORD, Lewis.** *The Condition Of Man.* NY Harcourt Brace 1944.
- This volume concludes the trilogy begun with *Technics and Civilization* and continued in *The Culture of Cities*. In the first book, the author spoke of the machines and methods responsible for technical progress; in the second, he portrayed our expanding urban environment. In this last book, he deals with the purposes and ends of human development.
- MUMFORD, Lewis.** *The Conduct Of Life.* NY Harcourt Brace 1951.
- MUMFORD, Lewis.** *The Myth Of The Machine: Technics And Human Development.* NY 1967.
- MUMFORD, Lewis.** *The Transformations Of Man.* NY Harper 1956.
- Mr Mumford's contribution to the "World Perspectives" series in which various authors suggest broad generalizations concerning man, begins with a description, partly mythical, of primitive man. The author then reviews significant changes which man has undergone, indicating possible causes of the changes, and some of the advantages and disadvantages of the main phases of human development. He cautions against over-emphasis upon "depersonalized scientific intelligence," and looks forward hopefully to the coming of world culture and a higher order of human personality.

- MUNITZ, Milton K (ed)** and Kiefer, Howard E (ed). *Ethics And Social Justice.* Albany 1970.
- This volume contains fifteen papers in the area of social philosophy. The first two papers are devoted to the philosophy of practice. The next series of papers centers on ethics. Philosophy of Law is the general theme of the next group of papers. The final topic considered is human rights.
- MUNITZ, Milton K (ed)** and Kiefer, Howard E (ed). *Language, Belief, And Metaphysics.* Albany 1970.
- The emphasis of this volume is upon logic, language, and the conditions of belief.
- MUNITZ, Milton K (ed)** and Kiefer, Howard E (ed). *Mind, Science And History.* Albany NY SUNY Pr 1970.
- MUNITZ, Milton K (ed)** and Kiefer, Howard E (ed). *Perspectives In Education, Religion And The Arts.* Albany SUNY Pr 1970.
- MUNITZ, Milton K (ed)** and Unger, Peter K (ed). *Semantics And Philosophy: Essays.* NY New York Univ Pr 1974.
- The articles in this collection are concerned with a variety of problems and programs in the philosophical semantics of natural language. The following articles are included: "Meaning and Semantics," "Semantic Rules," "Tensions," "Positions for Quantifiers," "Opacity and Scope," "Questions about Questions," "Attributives and Interrogatives," "Pragmatic Presuppositions," "The Refutation of Conventionalism," and "Truth."
- MUNITZ, Milton K.** *The Mystery Of Existence.* NY 1965.
- An analysis of the question: "Why is there a world at all?" is the principal theme of this book. It seeks to establish that there is a genuine mystery of existence, in opposition to those—like the positivists—who reject this claim, and to those—like the theists—who claim to have an answer to this question. The analysis touches on such views as: the meanings of 'mystery'; the various types of unanswerable questions, including the doctrine of the principle of verifiability; the meanings of 'the world', 'existence' as a predicate, and the concepts of 'reason' and 'rational method'. In rejecting those metaphysical views such as theism or Spinozistic naturalism that share

an adoption of the Principle of Sufficient Reason, the argument of the book seeks to uphold the need to adopt a position of agnosticism.

MUNITZ, Milton Karl. *Existence And Logic.* NY New York Univ Pr 1974.

The main purpose of the book is an examination of what the author calls "The Philosophical Problem of Existence." The author proposes that the legitimate uses of 'exists' be confined to cases in which reference is made to individual existents as parts of the spatial-temporal world and to the world itself. He begins with an historical discussion of the problem of existence in Parmenides and Aristotle. This is followed by chapters discussing and criticizing contemporary views in philosophical logic, including those of Frege, Russell, Quine, Geach, Strawson, and Lesniewski. He concludes with a discussion of the logic of 'world talk', that is, what it means to speak of the world as a whole.

MUNITZ, Milton Karl. *The Mystery Of Existence: An Essay In Philosophical Cosmology.* NY 1965.

MUNITZ, Milton K. Kantian Dialectic And Modern Scientific Cosmology. *J Phil* 48,325-337 My 51.

The antinomies presented by Kant in the *Critique of Pure Reason* are often considered grounds for denial of any positive knowledge in the realm of cosmology. The author of this article attacks Kant's first antinomy, which deals with space and time in cosmology, to show how it is dependent upon an outmoded Newtonian conception of space and time.

MUNITZ, Milton K. On The Use Of "Universe" In Cosmology. *Monist* 48,185-194 Ap 64.

There is a problem in clarifying the conceptual foundations of cosmology with respect to the use of the terms "universe" and "universe-as-a-whole." Concentrating on the philosophical issue of the differences between a realist and conceptualist evaluation of the ultimate worth of any cosmological model, the author asks whether there are any good reasons for believing the universe as defined by some particular cosmological model corresponds or approximates to the structure of the real universe. After showing how the answer depends on (1) the meaning we give to the phrase "the real universe" and (2) what cognitive status we assign to cosmological models, the author concludes: (1) the task of cosmology is to say something about the universe, hence a model of the universe must be employed but (2) the results of cosmology need not be thought of as giving us any more than heuristically valuable devices of representation or tools of inquiry.

MUNK, Arthur W. *A Way Of Survival.* NY Bookman 1954.

MUNK, Arthur W. *History And God.* NY Ronald Pr 1952.

This book is a brief account of the great major outlooks on the philosophy of history, followed by an exposition of the standpoint which seems to the author to be most inclusive and true, namely, the theistic points of view. In developing the thesis there is a critique of various interpretations of history in which there are successively reviewed the tenets of the newer apocalypticism, the several forms of naturalism, and other systems, especially positivism.

MUNK, Arthur William. *A Synoptic Philosophy Of Education: Toward Perspective, Synthesis And Creativity.* Nashville Abingdon Pr 1965.

In view of the current confusion "resulting from the spread of science and technology, the collision of cultures, two world wars, and the advent of the Nuclear Age," this book aims at "comprehensiveness, unity, and wholeness" in education. The attempt is made to find an underlying unifying principle among the various conflicting contemporary philosophies of education. Closely related to all this is the search for an all-embracing goal. This goal is conceived in terms of "the humanization of man." Considerable attention is also given to the concept of creativity: that is, in terms of its meaning and significance, the chief obstructions, and its relation to science, religion, and philosophy. The outlook of the book as a whole aims at being universal and global—with due stress both on the dangers and the possibilities of the Nuclear Age.

MUNK, Arthur W. Kant's Legacy To Philosophical Theology. *Phil Forum (Boston)* 19,33-40 1961-62.

MUNK, Arthur W. Philosophical Ferment In Great Britain. *Phil Phenomenol Res* 25,393-399 Mr 65.

Munk summarizes many philosophical tendencies in Britain since 1962, which include the work of: Ramsey, Daly, Smart, Ayer, Flew, Walsh, et al. He claims that there signs of creativity in: metaphysics, theology, and the philosophy of history. He concludes that in spite of the analytic and anti-metaphysical attitudes, there are signs of a coming change and the beginnings of a rebirth of metaphysics and philosophical theology, and also a new interest in the philosophy of history from Toynbee's perspective.

MUNK, Arthur W. The Coming Philosophic Revolution. *Personalist* 42,5-12 Wint-Ja 61.

MUNK, Arthur W. The Philosopher As Reformer. *Personalist* 40,380-387 Autumn-O 59.

MUNK, Arthur W. The Self As Agent And Spectator. *Monist* 49,262-272 Ap 65.

In a day when there is new interest in the problem of the self, it behooves us to investigate two vital aspects, namely, *agent* and *spectator*. While the first implies the person as conscious center of unity together with such capacities as efficacy, freedom, and creativity, the second involves the ability to behold, to contemplate, and to observe objectively. Not only do these aspects lie at the basis of the higher nature of man, but it must also be remembered that, apart from a self or person, they become meaningless abstractions. As over against John Macmurray, by means of a synoptic approach, an effort has been made to do full justice to both *agent* and *spectator*.

The truth of the matter is that, in the functional self-conscious unity of the person, both aspects really complement each other.

MUNRO, Donald Jacques. *The Concept Of Man In Early China.* Stanford CA Stanford Univ Pr 1969.

MUNRO, Thomas. *Art Education: Its Philosophy And Psychology, Selected Essays.* NY Liberal Arts Pr 1956.

This second volume of Professor Munro's *Selected Essays* deals more extensively with the psychology of art education than with its philosophy. Several essays discuss the place of art education in liberal and general education, and one is concerned with "Aesthetics and Philosophy in American Colleges."

MUNRO, Thomas. *Evolution In The Arts And Other Theories Of Culture History.* NY Abrams 1963.

In the first part of this massive work, T Munro offers a historical survey of theories of cultural change, including those of Vassari, Hugo, Condorcet, Turgot, Comte, Hegel, Taine, Marx, Morgan, Tyler, and Facillon, to name only a few. But the focal point of interest is Spencer's theory of evolution which, contrary to the usual modern view, Munro values as a useful hypothesis. In the second half of the book, Munro explicates his theory of creative evolution in the arts. He himself admits that it is a figurative concept; it can hardly involve physiological generation of the species in the sense that the biologist uses the terms.

MUNRO, Thomas. *Form And Style In The Arts: An Introduction To Aesthetic Morphology.* Cleveland 1970.

The author distinguishes carefully the set of problems, concepts, methods and purposes of aesthetic morphology from philosophical aesthetics and the related disciplines of art criticism and art history. In this work the author brings together the findings of a life-long career to lay the foundations for a new branch of aesthetics; its purpose is to increase the understanding of the arts as the proper scientific preparation for significant critical evaluation. Aesthetic morphology examines, compares and describes forms or "modes of arrangement" in the arts. There are many kinds of form, style being one of them; some are peculiar to one art, others to groups of arts. The descriptive study of a wide range of historical data drawn from the various art periods can yield valuable results for flexible taxonomy and can show "how certain types of form and style have persistent psychological and social functions evolving in response to individual and social needs."

MUNRO, Thomas. *Oriental Aesthetics.* Cleveland 1965.

Munro's book is divided into two parts: the first is an introductory survey, including discussions of aesthetics in Japan and India today, a comparison of Chinese and Western theories of fiction, music and drama, while the second is about the subjective element in Asian aesthetics, comparisons between Asian and medieval European aesthetics, and contrasts among Chinese, Japanese, and Indian aesthetics. Islamic art is not treated.

- MUNSAT, Stanley.** A Note On Factual Memory. *Phil Stud* 16,33-39 1965.
- This article takes up Malcolm's definition of factual memory: "A person, B, remembers that p from a time, t, if and only if B knows that p, and B knew that p at t, and if B had not known at t that p, he would not now know that p." The author attempts to show that Malcolm has given neither necessary nor sufficient conditions for saying that a person, B, remembers that p from a time t. He suggests that Malcolm's effort may have been misguided from the start, arguing that the very formulation of a definition seems to make an assumption which is probably not warranted, viz., that in even looking for such a definition one assumes that there is a single characterization which is true of all "rememberings" of the form "A person, B, remembers that p."
- MUNSON, Ronald (ed).** *Man And Nature: Philosophical Issues In Biology.* NY Dell 1971.
- MUNSON, Thomas N.** *Reflective Theology: Philosophical Orientations In Religion.* New Haven CT Yale Univ Pr 1968.
- MUNSON, Thomas N.** *The Essential Wisdom Of George Santayana.* NY Columbia Univ Pr 1962.
- This book was prompted by the author's desire to determine whether the several facets of Santayana's thought constitute a philosophical system. After a survey of the many aspects of Santayana's philosophy, the author concludes that Santayana has "a determinate cosmological point of view" and "a definite idea of man" and that his philosophy is, as Santayana himself says, "a lay religion." Throughout his exposition the author adopts a critical point of view, and ends his work with a general evaluation of Santayana's philosophy. An appendix, containing accounts of correspondence and interviews with Santayana, adds to the value of the book.
- MUNSON, Thomas N.** An Interpretation Of Hegel's Political Thought. *Monist* 48,97-111 Ja 64.
- Hegel and Wittgenstein, notwithstanding the profound differences between them, were both deeply concerned with the question "what is explanation?" Having argued elsewhere that this is indeed the core issue in Wittgenstein, Munson argues the same here about Hegel, in regard to the latter's political thought. After focussing on the relation of particular individual to State, the State as the embodiment of Reason and the concretization of dialectic, he concludes by spelling out ways in which Hegel makes common cause with Wittgenstein, and by raising various difficulties with Hegel over against Wittgenstein.

- MUNSON, Thomas N.** The Pre-Objective Reconsidered. *Rev Metaph* 12,624-632 Je 59.
- MUNSON, Thomas N.** Wittgenstein's Phenomenology. *Phil Phenomenol Res* 23,37-50 S 62.
- The author focuses on Wittgenstein's philosophical method, in order to mediate between the two philosophical traditions of phenomenology and linguistic analysis. The author concludes that Wittgenstein is practicing phenomenology. The article shows that the relation of sign to signified is the unifying concern of Wittgenstein's problems, and that this basic issue of "meaning" accounts for his view of philosophy as a phenomenology, as exercising a descriptive function.
- MUNZ, Peter.** *Relationship And Solitude.* Middletown CT Wesleyan Univ Pr 1965.
- Accepting Wittgenstein's argument that states of feeling cannot be known, the author maintains that, nevertheless, they can be symbolized, and "myth and ritual are the most fundamental forms of all such symbols." He then argues that metaphysical doctrines are "abstract descriptions of the symbol picture." Two historically principal symbol pictures are identified: a "creation picture," which involves an ethical goal of relationships, and an "emanation picture," which involves an ethical goal of solitude. It is finally argued that these two ethical goals presuppose each other.

- MURDY, J.** *Philosophy Of Atomic Physics.* NY Philosophical Lib 1958.
- "It remains unforeseeable why any recalcitrance should prevail where an attempt is being made toward the inclusion of concepts stressing finitude," Murdy writes. "After all, why such a view should be wrathed by subordination in preference to aspects of ad infinitum, is difficult to ascertain, especially so, if postulates conveying the impression of infinity are besieged by so many unknown factors."
- MURIAN, V** and Ikonnikova, S and Il'enkov, E. Ideals (Social, Esthetic, Moral). *Soviet Stud Phil* 4,35-51 Sum 65.
- MURPHEY, Murray G.** *Our Knowledge Of The Historical Past.* Indianapolis Bobbs-Merrill 1973.
- This book is an analysis of the nature of historical knowledge which takes its point of departure from those problems which have been of recent concern to philosophers of history. The author analyzes issues pertaining to the definition of history, the reference of historical statements, and the truth conditions of such statements. His conclusions in regard to these issues are that history is "a discipline the theories of which consist of statements referring to past objects and events and the consequences of those statements."
- MURPHEY, Murray G.** *The Development Of Peirce's Philosophy.* Cambridge Harvard Univ Pr 1961.
- The purpose of this book is to discover the principles upon which Peirce's philosophy was based and to show "that those principles bring order into the mass of fragmentary manuscripts which remain to us." What began as a dissertation is now an expanded study refined by the fire of "penetrating criticisms and suggestions." "Peirce regarded himself as a systematic philosopher... and believed in the architectonic theory of philosophy"—"his most enduring debt to Kant." He followed his "master in [the latter's] concept of system and... view of the role of logic in that system... the creative... agent in... [his] philosophy [his, therefore] his logic." This view of Peirce is held to have three consequences: his "flagrant contradictions" appear in better perspective; the order of his work becomes predictable; "creative factors in [his] development should be logical." The author had access to "previously restricted" materials. Four manuscripts are included in an appendix.
- MURPHEY, Murray G.** Kant's Children: The Cambridge Pragmatists. *Trans Peirce Soc* 4,3-33 Wint 68.
- MURPHEY, Murray.** On Peirce's Metaphysics. *Trans Peirce Soc* 1,12-25 Spr 65.
- MURPHREE, Idus.** Peirce: The Experimental Nature Of Belief. *J Phil* 60,309-316 Je 63.
- The position presented is that "belief," far from being Peirce's gravest lapse from conscientiousness, is rather the means by which he achieves a rigorous empiricism. Although Peirce himself expressed misgivings about the "psychological principle" on which he based his first formulation of pragmatism, he did not abandon and continued to intertwine both. It is a thesis of the paper that "belief" and the cluster of ideas centering around it are inseparable from Peirce's pragmatism. The following specific topics are discussed: (1) the particular use Peirce makes of "belief" in the papers of 1877-78, (2) Peirce's effort to distinguish "practical" from "theoretical" belief, and (3) his frequent statements that "science" is foreign to the "practical."

- MURPHY, Arthur E.** *Reason And The Common Good: Selected Essays,* William H Hay And Marcus G Singer (eds). Englewood Cliffs NJ Prentice-Hall 1963.
- This collection of essays by the late professor Murphy covers a wide range of philosophical topics and touches upon issues which have engaged the attention of philosophers during the last thirty-five years. The editors have grouped the essays under the following seven headings: Ethics, objective relativism, critical and speculative philosophy, American philosophy, social philosophy, freedom, and philosophy and education. Among the philosophers whose ideas are examined are: Jonathan Edwards, Kierkegaard, Dewey, Whitehead, G E Moore, and R G Collingwood.
- MURPHY, Arthur E.** *The Theory Of Practical Reason,* A I Melden (ed). La Salle IL Open Court 1964.
- The author takes as a central theme the use of reason in practical affairs. He contrasts practical reasons with other items with which these have been identified by past and present writers, and he sets forth the requirements of such reasons in general and of moral reasons in particular. Extended discussions and criticism are offered not only of such traditional moralists and/or critics of morality as Hume, Kant, Bergson, Nietzsche, Kierkegaard and Freud, but also of a wide range of contemporary writers.

An attempt is made to clarify issues in the problem of free will and moral responsibility when the latter is construed as justification for reward and punishment. It is argued that "freedom of self-determination" is sufficient to justify punishment and reward on utilitarian grounds but not sufficient to justify them on retributive grounds; that "freedom of indifference" could justify them on retributive grounds, but not on utilitarian grounds; that only "freedom of libertarianism" (described as a third alternative) could justify them on both grounds.
- MURPHY, G G S.** Sir Isaiah Berlin On The Concept Of Scientific History: A Comment. *Hist Theor* 4,234-243 1965.
- MURPHY, Gardner.** *Human Potentialities*. NY Basic Books 1958.
This is a general field theory of human nature by a distinguished psychologist who makes extensive reference to philosophical issues. Human nature is not fixed; though there are three main kinds: (1) original human nature as a product of biological evolution; (2) the cultural mould acquired in a lifetime; (3) an urge toward creative artistic and scientific discovery. The central problem that mankind faces is to fulfill all three human natures, leaving room for the realization and creation by free intellectual choice of an unlimited number of new human potentialities in the future.

- MURPHY, Jeffrie G.** Another Look At Legal Moralism. *Ethics* 77,50-54 O 66.
The idea that immoral conduct ought to be criminalized is already often rejected, but not for precisely the right reasons. Victimless crimes ought to be decriminalized not (as H L A Hart and J S Mill argue) because it is immoral to make crimes of them, but because it is contrary to the nature of the criminal law itself. Acts of private immorality do not violate the rights of the participants; thus they cannot be crimes because there is no crime where there is no deprivation of rights.
- MURPHY, N R.** *The Interpretation Of Plato's Republic*. NY Oxford Univ Pr 1951.
In this volume the author is concerned to point out the main arguments of the *Republic*. It is the author's view that what Plato actually said, obscure as it often is in itself, has sometimes been ever further obscured by interpretation, and that the need exists to go back to the text itself and re-examine its meaning. For the most part the treatment is concerned entirely with the philosophical subject matter, to the exclusion of historical and other controversies.
- MURPHY, Richard T.** Husserl And Pre-Reflexive Constitution. *Phil Phenomenol Res* 26,100-105 S 65.
The point here is to show that transcendental phenomenology is a logic of experience, and that prereflexive intentionality occurs in the transcendental ego. An effort is made to prove that the laws of "intentional constitution" are operative in pre-reflexive consciousness. It is concluded that transcendence is immanent because it is constituted in prereflexive consciousness.

This book is a systematic presentation from the Mādhyamika standpoint, combining careful documentation and technical precision with effective explications in terms of Western concepts. Often misunderstood as nihilism, the Mādhyamika system is here presented as an absolutism which employs a negative dialectic to expose the incompetency of reason to grasp ultimate reality, yet affirms a supra-rational intuitional union with it. Conceptual construction is the source of bondage and pain; freedom is made possible by the critical renunciation of conceptualization but is realized only in the positive, immediate intellectual intuition of the Absolute.

- MUSURILLO, Herbert.** *Symbolism And Christian Imagination*. Baltimore Helicon Pr 1962.
The author traces the diverse strains of symbolic expression used by the Christian church from its early days to the twelfth century. He finds that the primitive church had almost wholly rejected imaginative expression through the arts. This hostile attitude is characterized by the author as being incongruous with the biblical source of Christianity, so rich in poetic content. It is argued that the early Christians took their faith to demand total abandonment of the world, which in turn entailed contempt for the arts. The author expresses the position that imagination is indispensable to the religious life of the Christian. Imaginative creativity operates through polar tension; in the case of the Christian imagination the tension is between the natural and the supernatural. The role of art is taken to be one of expressing the reaction of the Christian imagination to its special conception of conflict in human existence.

MYERS, C Mason. The Circular Use Of Metaphor. *Phil Phenomenol Res* 26,391–402 Mr 66.

An explicatory metaphor has a circular use when the metaphorical expression literally refers to something, the concept of which involves in some essential way the concept being explicated. Such explication may be empirical or conceptual, and the circularity may be vicious or non-vicious. Berkeley's metaphor of the proper objects of sight constituting words in a language can be seen, with minor modification, to be capable of fruitful application even though it is circular. On the other hand, certain versions of the "ghost in the machine" metaphor are obviously sterile and hence viciously circular. This is distinct from Ryle's criticism of this metaphor. Whenever a metaphor is non-viciously circular the following conditions must hold: (1) The explicandum must be understood with at least the first grade of Peircian clarity, and (2) the explicans must have certain structure-revealing characteristics. In addition, certain of the interpreter's concepts must be implicit and certain others explicit.

MYERS, Charles M. Inexplicable Analogies. *Phil Phenomenol Res* 22,326–333 Mr 62.

MYERS, Charles M. On Actually Seeing. *Phil Stud* 8,28–32 1957.

The author takes issue with the position of G F Stout that "Only the bounding surfaces of bodies are visible and tangible"—thus actually seen. According to the author this leads to the view that a sense datum regarded as a two-dimensional patch of color is thought of as a "proper" object of perception. The author charges that on this view it would make no difference if all physical objects were filled with absolute nothingness.

MYERS, Eugene A. *Arabic Thought And The Western World In The Golden Age Of Islam.* NY Ungar 1964.

MYERS, Francis M. *The Warfare Of Democratic Ideals.* Yellow Springs OH Antioch Pr 1956.

The author aims to "clarify fundamental issues regarding the meaning of democracy and, in doing so, to formulate a workable criterion by which alternative meanings may be examined and judged." He reviews the philosophical positions of traditional empiricism, Neo-Thomism, "some Protestant absolutisms," and instrumentalism, selecting representatives of each school and examining (1) their explicitly stated philosophies of democratic government, (2) the character of the relationship between these statements and their supporting theoretical assertions, and (3) the adaptability of the general philosophic structure to a working democracy where no theory of the latter is specifically given.

MYERS, G E. Atomicity And Propositional Attitudes. *Phil Rev* 66,81–86 Ja 57.

MYERS, G E. Feelings Into Words. *J Phil* 60,801–810 D 63.

The aim is to prove, contrary to what is often assumed, that: (1) it is possible to misidentify one's feelings or emotions, (2) not all verbalizations of one's feelings are either diagnostic or reportorial, (3) uncertainty about how to describe one's feelings is not usually the result of psychoanalytic obstacles that prevent clear recognition of these feelings, and (4) it is not true that the final test of the accuracy of a feeling description is what a person introspects or decides. The paper emphasizes captioning, as distinguished from describing, as an important but overlooked linguistic activity and discusses its relevance to certain questions about how feelings are put into words.

MYERS, Henry Alonzo. *Are Men Equal: An Inquiry Into The Meaning Of American Democracy.* NY Putnam's 1945.

This book is an examination of the idea of equality in America. Its thesis is that equality, as the foundational concept of American democracy, must be clearly understood if that democracy is to survive, and as its own contribution to this problem offers an analysis of the concept from a systematic and historical point of view. In three central chapters, it describes: first, the meaning of equality as developed in the Declaration of Independence and reflected in the writings of Emerson, Hawthorne, Melville, and Whitman; second, the role of equality in the slave-controversy of the Civil War; and, third, the varying fortunes of the ideal between 1865 and 1941 under

the impact of industrial capitalism, Darwinian evolution, and socialism. The book concludes with a chapter summarizing those particular propositions about equality the author himself is most concerned to defend.

MYERS, Henry Alonzo. *Systematic Pluralism: A Study In Metaphysics.* Ithaca NY Cornell Univ Pr 1961.

This book tackles the proper relationship of the enduring in metaphysics, as against the temporally, culturally, and individually determined aspects. It seeks to justify major philosophical tradition by showing how new ideas are formed and how there is still a continuity possible despite constant change. Thus metaphysics need not be repudiated because of its temporally different, culturally or personally determined traits. The author argues for a metaphysical position which he calls "Systematic Pluralism," and which is characterized by advocating an infinite number of possible perspectives upon the "metaphysical object," each of which has its own possible systematization. Each system unites some particular insight with what is common to all, and each system contains its own set of categories. Spinoza and Hegel are reviewed especially as leading toward, thought stopping short of systematic pluralism.

MYERS, Henry Alonzo. *The Spinoza-Hegel Paradox: A Study Of The Choice Between Traditional Idealism And Systematic Pluralism.* Ithaca NY Cornell Univ Pr 1944.

A considerable part of the present small volume is given to "...showing that Spinoza and Hegel arrived at antithetical conclusions in spite of an amazingly long list of premises which they had in common." This is the Spinoza-Hegel paradox. The author is interested in developing the paradox in order to discover its inner truth or "resolution." The resolution consists in tracing the agreements in the thought of Spinoza and Hegel to certain basic theories shared by both (but not commonly recognized as similar or identical in both thinkers), and attributing the disagreements "...to the difference between the state of knowledge of the seventeenth century and that of the nineteenth."

MYERS, Henry Alonzo. *Tragedy: A View Of Life.* Ithaca NY Cornell Univ Pr 1956.

MYERS, M L. Philosophical Anticipations Of Laissez-Faire. *History Of Political Economy* 4,163–175 Spr 72.

Moral philosophers and theologians during the eighteenth century prepared the intellectual environment for laissez-faire. Long before Adam Smith offered viable economic arguments for a free market system these thinkers offered arguments in terms of philosophical psychology that private interest serves the public welfare. This group included Anthony Ashley Cooper, Joseph Butler, Alexander Pope, and Soame Jenyns.

MYHILL, John. Some Remarks On The Notion Of Proof. *J Phil* 57,461–470 Jl 60.

The author contends that Goedel's incompleteness theorem establishes that there exist, for any provably correct formal system containing the arithmetic of natural numbers, correct inferences which cannot be carried out in that system. The author further maintains that there is a sense of 'correct inference' or 'proof' which is not a syntactical notion relative to a particular system and which is not reducible to any semantical notion; rather it is a notion of some intermediate discipline which the author calls opiodictics. He gives some indications of how one might axiomatize the theory of absolute provability as an independent discipline.

- NAESS, Arne.** Reflections About Total Views. *Phil Phenomenol Res* 25,16-29 S 64. The article attempts to induce the reader to feel that an explicit total view is something paradoxical and unreachable, but that argumentation against the possibility of a total view is not less paradoxical. To take refuge in scepticism is self-defeating because efforts to be modest, whether in claims to know or otherwise, tend to pass into wild immodesty if pushed very far. Whereas Spinoza and others may have intended to elaborate an explicit total view, researchers into their system do well by treating their system as penultimate, one-step-from-total. Believers in total views are perhaps today more often found among social scientists than among philosophers. Karl Mannheim, e.g., is believed to have an all-embracing frame of reference such that he can sweepingly locate and describe "the total structure of the mind"—including the philosophies—of any epoch.

Stanford CA Stanford Univ Pr 1962. This volume contains the 63 papers under the auspices of a division of the "International Union of History and Philosophy of Science." The work of the congress was divided into eleven sections: (1) Mathematical Logic; (2) Foundations of Mathematical Theories; (3) Philosophy of Logic and Mathematics; (4) General Problems of Methodology and Philosophy of Science; (5) Foundations of Probability and Induction; (6) Methodology and Philosophy of Physical Sciences; (7) Methodology and Philosophy of Biological and Psychological Sciences; (8) Methodology and Philosophy of Social Sciences; (9) Methodology and Philosophy of Linguistics; (10) Methodology and Philosophy of Historical Sciences; (11) History of Logic, Methodology, and Philosophy of Science.
- NAGEL, Ernest (ed)** and Wolman, Benjamin (ed). *Scientific Psychology, Principles And Approaches*. NY Basic Books 1965. This volume thus attempts to bring about a rapprochement between scientific psychology and the philosophy of science. Thirty well-known philosophers and psychologists focus their attention on a number of current issues: how do the schools of contemporary psychology relate to pragmatism, behaviorism, analytic philosophy and existentialism? what are some key questions in social psychology, learning theory, psychoanalysis, testing, animal behavior, neuro-psychology, perception, information theory, and predictability in human behavior?
- NAGEL, Ernest.** *Sovereign Reason And Other Studies In The Philosophy Of Science*. Glencoe IL Free Pr 1954.
- NAGEL, Ernest.** *The Structure Of Science: Problems In The Logic Of Scientific Explanation*. NY .1961. This book is devoted primarily to the nature of scientific explanations, their logical structures, mutual relations, functions in inquiry, and devices for systematizing knowledge. Although there are other problems important in the philosophy of science, such as the logical structure of concepts and the evaluation of claims to knowledge, Nagel reserves these topics for another volume now in preparation. He maintains that the distinctive aim (though not sole aim) of science is explanation, i.e., to establish general laws which can serve as instruments for explanation and prediction. Four types of explanation are distinguished: 1) the deductive model, 2) probabilistic explanation, 3) functional or teleological explanation, and 4) genetic explanation—all of which have important similarities. Nagel is dubious about the views that biological or holistic explanations are special or unique, that there are *a priori* limitations which distinguish social science from the other sciences, and that historical inquiry is radically different from the logic of normal scientific explanation.

- NAGEL, Ernest** and Bromberger, Sylvain and Grunbaum, Adolf. *Observation And Theory In Science*. Baltimore Johns Hopkins Pr 1971. This book contains three lectures: Nagel, "Theory and Observation," Bromberger, "Science and the Forms of Ignorance," and Grunbaum, "Can we ascertain the Falsity of a Scientific Hypothesis?" Nagel's essay is concerned with refuting some of the specific objections recently raised against the observation-theoretical distinction and its philosophical relevance. He argues that the thesis that observation terms are theory laden is compatible with the above distinction, as well as rejecting the charge that the theory laden character of observation terms prevents theories from being put to a fair test. Bromberger's paper takes issue with the Hempelian account of the structure of scientific theories and scientific explanations. He urges an alternative model based on the 'logic of questions' which is claimed to avoid some of the conceptual difficulties of the Hempelian position as well as more adequately reflecting actual scientific practice.

- NAGEL, Ernest** and Newman, James R. *Gödel's Proof*. NY New York Univ Pr 1958. Gödel's proof concerns whether it is, in general, possible to give a complete set of initial postulates for a deductive system, to "formalize" an entire area. So in Gödel your postulates get translated into sets of numerals, for instance containing some prime number larger than ten. You can then follow this prime number like a colored thread through the subsequent development of the theorems. It seems to follow from Gödel's results that no complete set of laws, such as a complete determinist "world formula," can ever be made.

The topics dealt with include general theories of induction, special problems of statistics and prediction, and the relations of induction procedures to behavior and value theory.
- NAGEL, Thomas.** Hobbes's Concept Of Obligation. *Phil Rev* 68,68-83 Ja 59.
- NAGEL, Thomas.** Physicalism. *Phil Rev* 74,339-356 Jl 65. The paper describes relatively undisturbing conditions from which it would follow that a person is nothing over and above his body. Certain standard objections to physicalism are answered, concerning the location, intentionality, and alleged privacy of mental events. The concept of identity employed in a statement of physicalism is investigated, and a revised version of Leibniz's law is suggested to cover transcategorical identities. This is applied to identities between events, states, conditions, etc., and in the description of various versions of the identity thesis. Finally, an attempt is made to explain the author's persistent unhappiness with physicalism, which remains even when the standard objections have been answered. This is done in terms of an ostensible distinction between the self as subject and any object as possessor of its attributes.

NAGY, Paul J. Thoughts And Things: Pragmatism, Material Culture And The Celebration Of Ordinary Experience. *Southern Quarterly* 15,149-162 Ja 77.

The subject matter of an American philosophical tradition culminating in pragmatism has always been ordinary experience. This philosophical tradition can be an important instrument in the study of American material culture, for the latter is defined as (1) the commonly shared context of ordinary experience as it is shaped by the familiar artifacts of an industrialized and democratized society, and (2) the way these artifacts give concrete expression to the series of connected ideas that form the matrix of modern civilization. The convergence of thoughts and things in primary experience is illustrated in Shaker art, the paintings of Charles Sheeler, and the architecture of Robert Venturi.

NAHM, Milton C (ed) and Clarke, Francis P (ed). *Philosophical Essays In Honor Of Edgar Arthur Singer, Jr.* Philadelphia Univ Of Penn Pr 1942.

"It was not the assumption of the editors that each individual essay should apply the exact methodology of Professor Singer to the problem considered. Yet the diversity of the essays does indeed give evidence of the influence and suggestiveness of a systematic philosophy, the principles of which are formulated in the strictest mathematical and logical languages but whose elaboration has required analyses of the realms of art, morality and religion."

NAHM, Milton C. *The Artist As Creator: An Essay Of Human Freedom.* Baltimore Johns Hopkins Pr 1956.

This book is an analysis of the work of the artist as an aspect of the problem of human freedom. The freedom assumed in artistic activity is discussed, first, in terms of the history of the idea of the "great analogy" between the artist's work and God's work. It is maintained, specifically, that the distinction between the structure of art and of fine art derives from the difference between these two forms of freedom.

NAHM, Milton C. "Aesthetics In English-Speaking Countries". *J Phil* 57,281-285 Ap 60.

The author criticizes Moritz Weitz's "Aesthetics in English-Speaking Countries" for its exclusive preoccupation with philosophy of language. Weitz, he asserts, excludes both from his discussion and from his bibliography important works on aesthetics simply because they did not emanate from the linguistic tradition.

NAJM, Sami M. Knowledge Of The Self In Berkeley's Philosophy. *Int Phil Quart* 6,248-269 Je 66.

Given Berkeley's view of ideas and spirits and his reference to notions of spirits, actions, relations, and ideas, I argue that (a) the doctrine of the notion is his account of knowledge of the self, (b) to have a notion of something is to comprehend it non-perceptually and actively, and (c) Berkeley ultimately holds the self is substantial and knowable. By intuition and principled knowledge we know the self exists. Notional knowledge is not intuition. The former and principled knowledge presuppose intuition. Notions are conceptual or epistemological acts. Hence they serve to comprehend and present the self as active, non-sensible, independently existing subject and spiritual substance. They are "active, thinking images." Finally, I discuss the problems of the nature of the self, its identity and activity in relation to God and in view of recent commentaries.

NAKHNIKIAN, George (ed) and Castaneda, Hector-neri (ed). *Morality And The Language Of Conduct.* Detroit 1963.

This book contains essays by H D Aiken, R B Brandt, Hector-Neri Castaneda, W D Falk, W K Frankena, John Ladd, George Nakhnikian, Francis V Raab, and Wilfrid Sellars, on the nature of morality as an institution and on the nature and functions of the language of conduct.

NAKHNIKIAN, George. A Note On Plato's Theory Of Sensation. *Rev Metaph* 10,355-356 D 56.

NAKHNIKIAN, George. A Note On W Donald Oliver's Theory Of Order. *Phil Sci* 21,169-172 Ap 54.

NAKHNIKIAN, George and Salmon, Wesley C. "Exists" As A Predicate. *Phil Rev* 66,535-542 O 57.

Ayer, Broad, and Wisdom asserted that, if "exists" were a predicate, (1) all affirmative existential propositions would be tautologies and (2) all negative existential propositions would be contradictions. The arguments supporting these claims are analyzed and found to be fallacious. Moreover, these assertions are false. This is shown by constructing a first order monadic predicate calculus containing an existence predicate in which ordinary affirmative and negative existential propositions retain their contingent status. Within this logic, "All gods exist" is demonstrable, but "Some gods exist" is not; therefore, treating "exists" as a predicate does not validate the ontological argument.

NAKHNIKIAN, George. Contemporary Ethical Theories And Jurisprudence. *Natural Law Forum* 2,4-40 1957.

Four types of ethical theory have been the ones most heatedly debated among analytic philosophers since the appearance in 1903 of G E Moore's *Principia Ethica*. This essay describes their essential features and points out some of their readily discernible consequences for jurisprudence.

NAKHNIKIAN, George. Generalization In Ethics. *Rev Metaph* 17,436-461 Mr 64.

This article is a detailed examination of Marcus Singer's *Generalization in Ethics*. The focal claim in Singer's book is that there exists a criterion for being a relevant consideration in ethical reasoning. Singer's argument for this claim rests upon the false assumption that "It ought to be that someone does A" and "There is someone who ought to do A" are equivalent. With the failure of that focal contention, Singer's ingenious and elaborate edifice collapses.

NAKHNIKIAN, George. Intrinsic Good And The Ethical Ought. *J Phil* 51,788-793 N 54.

NAKHNIKIAN, George. Plato's Theory Of Sensation, I. *Rev Metaph* 9,129-148 S 55.

This article is a detailed exposition of the theory of sensation in the *Theaetetus*. The essay contends that this theory is genuine Platonic doctrine. The material covers almost everything that Plato said about sensation.

NAKHNIKIAN, George. Plato's Theory Of Sensation, II. *Rev Metaph* 9,306-327 D 55.

This article is a detailed exposition of the theory of sensation in the *Theaetetus*. The essay contends that this theory is genuine Platonic doctrine. The material covers almost everything that Plato said about sensation.

NAKHNIKIAN, George. Value And Obligation In Mill. *Ethics* 62,33-40 O 51.

This paper attempts to save Mill from Moore's charge that Mill equivocates between two meanings of 'desirable' in the famous argument for hedonism. Mill may be read as saying that the only test of anything's being intrinsically good is that it is a natural, original, ultimate object of desire. Anything else is good only insofar as it is conducive to intrinsic good or a part of it. Evaluations are determinants of conduct. That course of action is judged to be obligatory which maximizes to social good because a normal individual knows that the duties imposed by the social order cannot be shirked without jeopardizing the welfare of the self.

NARVESON, Jan. *Morality And Utility.* Baltimore Johns Hopkins Pr 1967.

He argues that Utilitarianism as originally proposed by Bentham, then Mills and Sidgwick, is a defensible doctrine which is in no need of the modifications of supplements proposed in this century. Narveson takes up each of the proposed revisions in turn and shows in detail how the alleged need for it rests on various confusions. By a painstaking analysis of intrinsic value the author shows that the introduction of Ideal Utilitarianism is unnecessary. He also shows how the original form of Utilitarianism can take account of rules, intentions and obligations by considering the utility of blame and other factors. A utilitarian ethics of truth-telling and promising is given. The Generalization Argument is shown to be both dispensable and undesirable, and utilitarian justification of punishment is given which does not entail punishment of the innocent. Distributive justice is incorporated in Utilitarianism without appeal to a supplementary principle. Finally, narveson offers a proof that it is irrational to deny the principle of utility.

NARVESON, Jan. On A New Argument From Design. *J Phil* 62,223-228 Ap 65.

We rely on our senses for information about the external world. But if we were to rely on the information contained in a sentence found inscribed in sand, author unknown, we would be forced to assume there was an author; so perhaps there is an

- Author of Nature speaking to us about His creation through our sense organs. So argues Richard Taylor in his *Metaphysics*. But we have to sense the marks or sounds which embody sentences; but if our sense organs literally conveyed information to us, we should have to learn to "read" their language by knowing their structures before we could sense with them, and we don't. We would not automatically trust anything our sense organs did happen to say to us even if they could say anything. We would have to check up on their veracity by *observation*. Thus sensing cannot be understood as analogous to understanding what someone or something is saying to us; hence the argument fails.
- NARVESON, Jan.** Pacifism: A Philosophical Analysis. *Ethics* 75,259–271 J1 65.
Of all the attitudes and theories associated with or identified as "pacifism," only the doctrine that everyone ought not to resist violence with force is of philosophical interest, and it is logically incoherent. Pacifism's popularity rests on confusions about what the doctrine really is. If we have rights, we have the right to prevent infringements upon them. We have the right to use force to protect our rights, and in the degree necessary to accomplish that end.
- NASH, Arnold S.** *The University And The Modern World: An Essay In The Philosophy Of University Education*. NY Macmillan 1943.
In Part One, "The Plight of the Liberal Democratic University" is described as following from the rise of "scientific individualism" or rational democratic liberalism. These are names for any view of human nature and society which is "optimistic" and "atomic." There follows, in Part Two, ("The Totalitarian University: A True Diagnosis but a False Remedy"), a concession to the Nazi and Marxist philosophy of education, namely, that it properly recognizes the fact that knowledge is integral to action and that non-intellectual factors are important in determining attitudes. The university curriculum is, in this light, organized into an efficient whole. The solution is given in Part Three, in the form of propaganda for the Christian *Weltanschauung*, an amalgam of Mannheim's "sociology of knowledge" and Niebuhr's theology and metaphysics of human nature.
- NASH, Dennison.** Challenge And Response In The American Composer's Career. *J Am Art Crit* 14,116–122 S 55.
- NASH, Leonard K.** *The Nature Of The Natural Sciences*. Boston Little Brown 1963.
The book touches upon every phase of science, from its historical and contemporary status as an intellectual discipline to its role in the social structure. The author maintains that scientific inquiry requires an acceptance of several metaphysical presuppositions, namely, continuity, determinism, the reality of the world, dissolubility, and, finally, the principle of intelligibility which asserts "man's obligation to understand (the real world)."
- NASH, Leonard K.** and Conant, James Bryant. *Harvard Case Histories In Experimental Science*. Cambridge Harvard Univ Pr 1957.
Prepared as a series of brochures for a course on general science at Harvard, this work is now brought out in a library edition, for those with other interests who want to know what natural science is about, what the scientists are trying to do, and the methods used. Cases are selected from the great scientific discoveries of the past; and the steps actually taken are followed in sufficient detail to reveal the aims and methods of those who did the work.
- NASH, Paul.** *Authority And Freedom In Education: An Introduction To The Philosophy Of Education*. NY Wiley 1966.
The philosophy of education is usually approached through a broad gate—either the history of the entire subject or an analysis of the clash of opposing philosophies affecting the entire subject. In this book, the approach is made through a narrower gate, which nevertheless opens as much as the others do into the entire subject. The narrower gate is a specific issue, that of authority versus freedom (or rather of how much authority and how much freedom, or what kind of authority and what kind of freedom, will make the best mixture), in several fields of interest or endeavor which bear upon education. Thus, the constraining and the liberating features of work and play, of discipline, of school and other institutions, of group living, of tradition, etc., are explored.

- NASH, Peter W.** Ordinary Knowledge And Philosophical Demonstration Of God's Existence. *Proc Cath Phil Ass* 28,55–77 1954.
- NASH, Ronald H.** *Dooyeweerd And The Amsterdam Philosophy*. Grand Rapids MI Zondervan 1962.
This book aims to give both an elementary exposition of Dooyeweerd's philosophical system and to raise some critical questions concerning it. The author does not question Dooyeweerd's basic thesis that "scientific and philosophic systems of thought are dependent upon and conditioned by religious and pre-theoretical presuppositions" and he expounds this in terms of Dooyeweerd's theory of the autonomous "law-spheres." His critical comments center on Dooyeweerd's tendency toward vague and ambiguous language and his failure to work out crucial aspects of his theory, especially in relation to the theories and criticisms of other philosophers.

- NATANSON, Maurice Alexander (ed).** *Phenomenology And The Social Sciences, I–II*. Evanston IL 1973.
- NATANSON, Maurice.** *A Critique Of Jean-Paul Sartre's Ontology*. Lincoln 1951.
- NATANSON, Maurice.** *Edmund Husserl: Philosopher Of Infinite Tasks*. Evanston IL 1973.
This winning work has the virtue of serving not only as an introduction to the thought of Husserl but also as an introduction to the whole field of phenomenology. There are chapters on the application of phenomenological method and on the relation of pure to existential phenomenology. An underlying thesis is that the movement of Husserl's intellectual pilgrimage—beginning in a preoccupation with the grounds of mathematics and logic and culminating in the concern for the life-world—displays an intrinsic unity and necessity.
- NATANSON, Maurice.** *The Journeying Self: A Study In Philosophy And Social Role*. Reading MA Addison-Wesley 1970.
This essay views the social role of the individual "from a phenomenological and existential standpoint." If we try to examine experience with as few preconceptions as possible, we initially find—according to Natanson—particularizations of "now" and "here," then awareness of other individuals in the notion of "our" world. In science, experience becomes additive. In social science, we have "man observing Man." Objectivity in science depends in part on relevance. From science, the author proceeds to history, art, and religion, attempting to show how they develop from immediate experience.
- NATANSON, Maurice.** *The Social Dynamics Of George H Mead*. Washington DC Public Affairs Pr 1956.
This book aims at correcting what its author believes are mistaken interpretations of Mead's theory of society. Mead's major works are analyzed separately in support of his thesis, with emphasis upon the notions of subjectivity and temporality developed by Mead in his later years. Both the exposition and the criticism of Mead's social theory are designed to display, in part, its affinity with Husserl's phenomenology.
- NATANSON, Maurice.** Being-In-Reality. *Phil Phenomenol Res* 20,231–237 D 59.
Natanson's thesis is that the very articulation of the problem of "being-in-reality" requires a departure from the "naturalistic position" or more generally, a disconnection from what Husserl calls the "natural attitude." The phenomenological description of "being-in-reality" is first, the initial disconnection from the natural attitude that is at the root of existential awareness of what it means to be in the world. Then it is a radical endeavor to illuminate our full intentional structure of the horizontal directedness of the "in" which defines every act of placement. One's intentions are directed to the concrete situations in which one lives; the elements of these situations are not objective things, but phenomenological objects of intentional acts.

- NATANSON, Maurice.** Man As An Actor. *Phil Phenomenol Res* 26,327–341 Mr 66.
Man is both an actor in the social world and a theatrical performer. The ambiguity in this double sense of "actor" is examined through a perceptual metaphor: seeing the action of a stage play is something like seeing persons in painted portraits, for there is a strangeness and a fragility to their mode of being. They are unreal in their physical reality and real in their fictive unreality. There is also a curious resemblance between action in mundane life and on the stage. Life-action is a condensed rehearsal in ongoing imagination of limits and possibilities. The actor in life is probing, feeling out, thrusting himself toward decisions he knows he can and will make. The stage actor utilizes marginal or fringe dimensions of perception. Stage acting is a kind of transliteration of the marginal language of proto-reflective life. Acting, off-stage as well as on, is a search for the essential in both person and role, and the essential self is the soul. Acting, then, is the hermeneutics of the soul.

- NAUERT, Charles G.** *Agrippa And The Crisis Of Renaissance Thought.* Urbana 1965.
The author describes his work as an "attempt to portray in the life and thought of Agrippa the career of a personage who shared many of the hopes and still more of the fears of his age, and who also, in his widely influential appeal from bankrupt human reason to the wisdom of an occult antiquity, represents an important reaction of Renaissance thinkers to their intellectual predicament." The first half of the book concentrates on the biography and the second half on an analysis of the thought, emphasizing "the importance of a strong pessimism about human learning" and Agrippa's attempts to escape from this particularly in his studies in the occult arts.
- NAUGHTON, James W.** Philosophy Of Beauty In Saint Augustine. *Mod Sch* 17,43-46 Mr 40.
- NAUMAN JR, St Elmo.** *Dictionary Of American Philosophy.* NY Philosophical Lib 1973.
The volume is a collection of brief sketches of concepts, terms, movements, societies, but particularly the thinkers within the major and minor streams of american thought. It defines Evolution, Epistemology, Education, Freedom, Society, Behaviorism, Humanism, Pragmatism, and The Ethical Culture Society. The selection of American philosophers, and "philosopher" is used in the broadest possible sense, includes all the notables such as James, Dewey, Royce, Carnap, Edwards, Thoreau, etc. The breadth of definition is indicated by the inclusion among the "major thinkers" of Benjamin Franklin, Thomas Jefferson, Paul Tillich, Herbert Marcuse, and Eric Hoffer.

- NEEDHAM, Rodney.** Descent Systems And Ideal Language. *Phil Sci* 27,96-101 Ja 60.
- NEF, John U.** *A Search For Civilization.* Chicago Regnery 1962.
The writer's aim is to elucidate the fundamental characteristics of Christian morality, expounding its formal features as a system rather than its application in specific situations. His conclusion is that the Christian system is: 1) Objective: it claims to state moral truths which are made true by certain objective facts; 2) Authoritative: its moral truths derive from some authoritative experient of the ultimate moral facts; 3) Attitudinal: it calls for the pursuit of personal perfection in the adoption of specific attitudes; 4) Teleological: it speaks of a final moral end to be realized by individual moral actions here and now; 5) Charismatic: it actually offers a power to begin to realize the new quality of life which it authoritatively demands.
- NEF, John U.** *The United States And Civilization.* Chicago Univ Of Chicago Pr 1942.
Diagnoses of the crisis of our western civilization are mushrooming. Mr Nef's diagnosis, one of the best-founded, forms an important contribution to moral philosophy. Much less convincing than his diagnosis is Mr Nef's conception of "the ends of civilization". The prescriptions, however, which form the third part of his book and propose to turn civilization away "from plenty and comfort" to "wisdom, goodness, and beauty" will, I am sure, gain the undivided interest of all engaged in what may be called the therapeutics of civilization.
- NEF, John U.** Art In France And England, 1540-1640. *Thomist* 5,281-307 Ja 43.
- NEF, John Ulric.** *The Universities Look For Unity: An Essay On The Responsibility Of The Mind To Civilization In War And Peace.* NY Pantheon Books 1943.
The assumption of this essay is that totalitarianism is "the creation of men's minds.. a moral, an intellectual and an aesthetic problem." The existing state of "artistic and philosophical nihilism" is due to an extreme form of individualism and to "the dominance of natural science and mechanical technique." Hence, it urges that higher learning must train students in graduate studies for "a philosophical view of knowledge," particularly "past thought and art."

- NEFF, Frederick C.** *Philosophy And American Education.* NY Ctr App Res In Ed 1966.
The author classifies and evaluates philosophical traditions for their contributions to education under the following four headings: (1) Idealism (2) Realism (3) Pragmatism and (4) Analysis and Existentialism. Idealism the author values for "universal scope," but disvalues e.g., for its failure to consider specific ways in which values are translated into classroom procedures and human conduct generally, for its tendency to indoctrinate, and for its refusal to subject educational goals to empirical validation.

- NEIDORF, Robert.** *Deductive Forms: An Elementary Logic.* NY Harper & Row 1967.
The introductory text develops a system of natural deduction through investigation of simple valid argument forms. Before any symbolism is introduced, the first chapter defines validity and logical form, and gives some simple tests for validity. Chapters 2, 3, and 4 cover propositional logic from truth tables to a completeness proof. Chapters 5 and 6 extend the system to simple (i.e., monadic) quantificational arguments. The seventh chapter is a quick summary of syllogistic and Venn diagrams. The final chapter covers complex (multiple) quantificational arguments, relations, and identity.
- NEIDORF, Robert.** Is Einstein A Positivist? *Phil Sci* 30,173-188 Ap 63.
- NEILL, Thomas P.** *Makers Of The Modern Mind.* Wilwaukee Bruce 1949.
The author discusses the contemporary history, personality and doctrine of each of eleven men who, in his opinion, have had a critical influence in shaping the modern mind. He begins with Martin Luther and treats in succession Calvin, Descartes, Locke, Newton, Rousseau, Kant, Bentham, Darwin, Marx and Freud.
- NEILL, Thomas P** and Collins, James. *Communism: Why It Is And How It Works.* NY Sheed & Ward 1964.
Chapters 8-13 make a comparative study of the philosophies of Marx and Hegel. Each has a distinctive method and philosophy, responsive to the needs of his age but not simply reducible to a cultural reflex. Marx finds Hegel useful, insofar as the latter takes a contextual and historical approach. But Marx criticizes ideologies and presents a methodology for social revolution.

NELL, Onora. *Acting On Principle: An Essay On Kantian Ethics.* NY Columbia Univ Pr 1975.

Nell is not primarily interested in metaethics but rather in the application of principles to moral choice. Chapters 3-6 constitute a thoughtful re-interpretation of the main elements in Kant's ethical theory: duties under justice and the other virtues, the categorical imperative viewed cognitively and volitionally, the role of the good and of right obligation. The last chapter fits deontology into the problematic of present-day ethics.

NELSON, A F. *The Structure Of Normative Ethics.* Ann Arbor MI Edwards 1943.

This is an analytic study, seeking to clarify the meaning of judgments about what is intrinsically good, and to indicate the methods by which they may be confirmed or disconfirmed.

NELSON, Alvin Fredolph. *Inquiry And Reality: A Discourse In Pragmatic Synthesis.* Fort Worth 1974.

This essay seeks to outline a pragmatic epistemology and metaphysics, acknowledging its sources in Peirce, James and Dewey, as well as Lester Ward, J S Mill, W H Werkmeister, J A Leighton and others, and attempting "to reconcile the disparate positions of Conant, Kuhn, Hempel, the inductivists, and Popper." Nelson argues that Aristotelianism, emergentism and absolute idealism can be synthesized because their primary relational concepts are severally warranted by private experience, common sense and science.

NELSON, Benjamin (ed). *Freud And The Twentieth Century.* NY Meridian Books 1957.

This book contains various papers about Freud and his work. Following are the main headings: Part I "Mid-century Perspectives"; Part II "Men and Times"; Part III "The Sciences of Mind and Health"; Part IV "Society and Politics"; Part V "Literature and the Arts"; Part VI "Philosophy and Religion."

NELSON, H G. *A Framework For Thought: An Attempt At The Scientific Interpretation Of History.* NY Pageant Pr 1961.

NELSON, Harold A. How Shall The Advocate Advocate: A Fictional Case Study In Role Conflict. *Ethics* 76,239-252 Jl 66.

This essay pursues the problems of value-advocacy in sociology by means of a fictional case study concerning academic freedom and racial integration in a southern university. The case study develops problems faced by advocates of racial reform within a university in a racist state where a public advocacy of integrationist policies may actually work against their successful implementation.

NELSON, Jack and Moor, James. A Program To Teach Logic. *Computers And The Humanities* 8,278 S-N 74.

Bertie is a computer program which checks student deductions in sentential logic and quantificational logic (with identity). *Bertie* makes sure each formula entered is well-formed and correctly justified. Students may either enter problems of their own or work on stored problems. In either case *Bertie* provides the student with immediate feedback about his mistakes. If a student gets stuck on one of the stored problems, *Bertie* can provide hints or some or all of a stored solution. Such computer-assisted instruction helps students acquire the strategies and tactics needed for solving problems in natural deduction.

NELSON, James B. *Moral Nexus: Ethics Of Christian Identity And Community.* Philadelphia Westminster Pr 1971.

The work is an original contribution to the field of Christian ethics in that it relates genuinely germane contemporary interpretation from social psychology and sociology to the church as a community and the self as a moral entity. The author is certain that the community is both the goal and the medium of human existence. The church's moral significance lies, therefore, not only in its conscious moral persuasion and action, but in the less visible ways in which personal identity is shaped, motivations nurtured, and the balance of institutional role-playing determined.

NELSON, John Charles. *Renaissance Theory Of Love.* NY Columbia Univ Pr 1958. A detailed study of Giordano Bruno's *Erici furori* is the center of this book. The tradition of Platonic love treatises prior to Bruno's work is traced, and the development of neo-Platonism in the Renaissance closely considered. Bruno's relationship to Pico della Mirandola, Marsilio Ficino, and other philosophers of the time is discussed, and an attempt is made to place Bruno's thought in the historical context of the Renaissance. A bibliography and index are included with the book.

NELSON, John O. A Question Of Entailment. *Rev Metaph* 18,364-377 D 64.

A R Anderson and N D Belnap, Jr., maintained in their 1962 article, "The Pure Calculus of Entailment," that necessary propositions can be entailed only by necessary propositions, and not by contingent ones. Against this R W Ashby offered an apparently conclusive counterexample in "Entailment and Modality" (1963). In support of Anderson and Belnap, the author of the present paper develops a definition of entailment and argues that contingent propositions never entail

necessary ones. However, psychological factors may intervene in our logical perceptions to produce an appearance or illusion of entailment between a contingent and a necessary proposition.

NELSON, John O. An Examination Of D M Armstrong's Theory Of Perception. *Amer Phil Quart* 1,154-160 Ap 64.

NELSON, John O. An Inconsistency In "Dreaming". *Phil Stud* 15,33-34 1964.

NELSON, John O. Can One Tell That He Is Awake By Pinching Himself? *Phil Stud* 17,81-83 1966.

NELSON, John O. In Defense Of The Traditional Interpretation Of The Square. *Phil Rev* 63,401-413 Jl 54.

NELSON, John O. Knowledge Of Remote Existence. *Rev Metaph* 11,569-578 Je 58.

NELSON, John O. Modal Logic And The Ontological Proof For God's Existence. *Rev Metaph* 17,235-242 D 63.

The author contends that the modal logic employed in his slightly altered version of the ontological argument constructed by Charles Hartshorne in *The Logic of Perfection* does not provide a distinct notation for the domains of necessary and contingent existence. Consequently, the argument owes its apparent force to an equivocation. Analysis reveals that either the premises are true but the argument is invalid, or the argument is valid but not undeniably sound. Moreover, the argument in question allows one to argue with equal plausibility that God does not exist.

NELSON, John O. Mr Hochberg On Moore: Some Corrections. *Rev Metaph* 16,119-132 S 62.

In his 1962 article, "Moore's Ontology and Non-Natural Properties," Herbert Hochberg argued that G E Moore's asserted nominalism can be traced to his paper, "The Nature of Judgment" (1899), where he denied the existence of universals. The author of the present paper contends that Hochberg's interpretation and conclusions are untenable. In support of his position, he first argues that Moore did not endorse further doctrines that a consistent nominalism would require. He then systematically examines Hochberg's arguments, reconstructs Moore's ontology, and proposes that Moore's distinction between natural and non-natural properties be explained as a difference between a priori and empirical universals.

NELSON, John O. On Sommers' Reinstatement Of Russell's Ontological Program. *Phil Rev* 73,517-521 O 64.

In this discussion-paper I question four theses that I took Sommers to be advancing, among others, in "Types and Ontology": (1) that types are indifferent to predicate denial; (2) that a formal method of type discrimination can establish as correct a specific ontology; (3) that subjects of sentences can be located by certain described formal methods; and (4) that there must be one category that includes all others.

NELSON, John O. On The Impossibility Of Theories Of Meaning. *J Phil* 60,296-302 My 63.

Theory ALO holds that if any person can truly assert, "By *p* I meant *q*," then *q* is contained essentially in *p*, and hence any other person could truly assert, "By *p* I could have meant *q*," even though in fact he had not. The aim of this paper is to argue: "If any philosophical theory of meaning is an adequate theory, ALO is. An adequate theory of meaning cannot convert contingent propositions into self-inconsistent ones, but ALO does." It is demonstrated that, if we interpret two self-consistent sets of propositions according to ALO, then *p*, a constituent of each set and a contingent proposition, is transformed into a self-inconsistent proposition.

NELSON, John O. Tastes. *Phil Phenomenal Res* 26,537-545 Je 66.

In this article I first examine three traditional theories concerning the metaphysical nature of tastes or flavors. These are the theory claiming that tastes or flavors are subjective affections of the senses, the theory claiming that they are objects contained in the material things said to have them, and Hume's theory of tastes. I argue that these theories, in spite of some portion of truth which they possess, are all untenable. I then defend as the correct theory of the metaphysical nature of tastes a theory similar to Aristotle's. In support of this theory and against Hume, I maintain that it is conceivable that a taste or flavor have a shape, although agreeing with Hume that it would be absurd to say that the taste of a fig was fig-shaped.

NELSON, John O. The Conclusion Of Book One, Part Four, Of Hume's Treatise. *Phil Phenomenal Res* 24,512-521 Je 64.

The conclusion of Book One, Part Four, of Hume's *Treatise* has been viewed by his critics as being either a vagary of youth or an admission of philosophical failure. The chief cause of this view is the oscillation of feelings with respect to the pursuit of philosophy which Hume portrays in this section. The article argues that this oscillation of Hume's feelings does not constitute an admission of philosophical failure or a vagary of youth, but rather confirms and consummates the three basic theses and ends of the *Treatise*, namely, to show that all other sciences are based on the science of Man, that this science is properly based on observation and experiment, and that our knowledge has certain definite limitations. The author argues further that in the concluding section of Book One Hume reflexively validates the science of Man, and that is to say, the preceding sections of Book One.

NELSON, John O. The Confirmation Of Hypotheses. *Phil Rev* 67,95-100 Ja 58.

NELSON, John O. The Validation Of Memory And Our Conception Of A Past. *Phil Rev* 72,35-47 Ja 63.

Two philosophical questions about memory have arisen: how is it possible to validate memories when what we remember is in the past and the remembering of it is in the present? And secondly, if in our attempts to know the past we are always stuck in the present, how can we have any idea of a past at all? Nelson tries to show that both the skepticism and the mystery concerning memory found in these questions are a fiction of philosophy generated by two errors. First, memory is treated in an isolated first-person context instead of an interpersonal context. And second, every reference to the past that meets the "absolute" criteria for being a memory is treated as an instance of memory.

NELSON, John O. *Y-Propositions.* *Phil Stud* 12,65-71 1961.

The author discusses what he calls *y*-propositions, viz., propositions which do not fit into the traditional two categories of empiricism: the analytic-necessary-*a priori* and the synthetic-contingent-*a posteriori*. He suggests that such propositions might best be described as "necessary-*a priori*-synthetic" and attempts to show that they might be accounted for on purely empiricist principles. He gives the statement "A color is extended" as an example of a *y*-proposition, arguing that it is a necessary proposition since we cannot imagine that some colors are not extended and that it is *a priori* in the sense of being logically prior to experience.

NELSON, John O. Zeno's Paradoxes On Motion. *Rev Metaph* 16,486-490 Mr 63. The author argues that, although Zeno's paradoxes on motion cannot be resolved in their own terms, they are nonetheless illegitimate. Examining the paradox of Achilles and the tortoise, he finds that the mechanism of Zeno's argument consists in an equivocal concept of motion characterized at once by a constant rate and by proportionate segments of movement. He then contends it is illegitimate to treat the concept of motion and its subconcepts like the postulates of a deductive system. However, that the common theory of meaning presupposed by Zeno's paradoxes is erroneous would have to be demonstrated metaphysically.

NELSON, Norman Edward. *Peter Ramus And The Confusion Of Logic, Rhetoric, And Poetry.* Ann Arbor 1947.

NELSON, Ralph Waldo. *Free Minds: A Venture In The Philosophy Of Democracy.* Washington DC Public Affairs Pr 1961.

NELSON, Raymond J and Kaminsky, Jack. Scientific Statements And Statements About Humanly Created Objects. *J Phil* 55,641-647 Jl 58.

Statements of technology such as 'For every *x*, if *x* is a properly constructed relay being operated under specified conditions, then *x* produces an output *o*', are considered and it is argued that they are neither analytic nor synthetic. The sense of the consequent is not included in that of the antecedent; and a single confirmation instance suffices for certainty. As Dewey pointed out, such statements, neglected by philosophers of science, come from and are generalizations from practice, not from science.

NELSON, Raymond J. Simplest Normal Truth Functions. *J Sym Log* 20,105-108 Je 55. An alternative to Quine's well-known method of obtaining simplest normal truth functions is derived. In particular it is shown that there is an effective operation whereby conjunctive normal equivalent of a truth function ϕ can be transformed to a disjunction of all of the prime implicants of ϕ . Simplest versions of ϕ can then be found by prime implicant tables or other means.

NELSON, Raymond J. Weak Simplest Normal Truth Functions. *J Sym Log* 20,232-234 S 55.

The method described in *The Journal of Symbolic Logic*, Volume 20, Number 2 (June, 1955), pages 105-107 is extended to the case of truth functions where certain conjunctions of letters always have the value false.

NERLICH, G. Presupposition And Entailment. *Amer Phil Quart* 2,33-42 Ja 65.

P F Strawson's theory of presupposition as a distinct logical relation oscillates between two incompatible positions, roughly (1) that reference failure removes the truth value of statements, and (2) that it prevents sentences from issuing in statements at all. It is argued that (1) does not provide a basis for distinguishing presupposition from entailment. First, (1) does not require that presupposition be distinguished from entailment and in any case the distinction could be based only on some form or arbitrary legislation for logical terms. Strawson's claim that, given his theory and this legislation, we gain advantages in interpreting the logic of the classical square of opposition is false and his reasons for making the claim are confused. Finally, it is argued that position (2) is false at least for cases central to Strawson's argument. An attempt to modify Russell's dichotomy "true, false or meaningless" is defended.

NERSOYAN, H J. *André Gide: The Theism Of An Atheist.* Syracuse NY Syracuse Univ Pr 1969.

This book examines such claims made by André Gide as are relevant to the philosophy of religion and ethics. Disagreeing with many critics, including J-P Sartre, the author shows through an analysis of Gide's contradictions and symbolisms that Gide, while anticipating many of the themes of French Existentialism, consistently maintains a religious worldview beneath the cover of a secular language. Gide's

principal ethical claim, hidden in his occasional arguments in favour of a Nietzschean stance, is that a behaviour is praiseworthy when it conforms to nature, provided it simultaneously improves the world ethically and contributes to general well-being.

NERSOYAN, H James. Action In Indian Philosophy. *University Of Dayton Review* 9,35-42 Fall 72.

This article distinguishes between acceptance of a theory and mere recognition that it is a viable point of view. The author argues from the latter perspective that Indian philosophy typically tends to the conviction that the ideal action is that which overcomes all action. Time and space which constitute the theatre of action are the sphere of inevitable frustration. The core of reality is beyond them. This is shown principally through an analysis of the Samkhya-Yoga, a philosophical "system" which is also relevant to the study of the mind-brain issue.

NERSOYAN, H James. Mortality And Morality. *University Of Dayton Review* 8,57-63 Wint 71.

We begin with an analysis of fear: it is defined as the emotional reaction to anything that is a threat to the abundance of life, the negative limit of this abundance being a level of brain activity where consciousness is not generated, or, if it is, the consciousness is only that of paralyzing pain. It follows that death is not merely another member of the class of feared things. All fear is the fear of partial or total death. The value of certain virtues such as courage is re-examined from this perspective, some possible objections are met, and the conclusion drawn that our morality is shaped by our mortality.

NESBIT, Francis Ford. *Language, Meaning And Reality: A Study Of Symbolism.* NY Exposition Pr 1955.

This is a popular book on semantics, illustrating and commenting on uses of symbols in the social and physical sciences. The author deals with subtle uses of language in practical affairs and in politics.

NEVILLE, Robert (ed) and Gaylin, Willard (ed) and Meister, Joel (ed). *Operating On The Mind: The Psychosurgery Conflict.* NY Basic Books 1975.

The authors present a careful review of the problems of psycho-surgery. In addition to reviewing significant prior practices, problems of consent and issues of social policy, the essays that make up the text are offered as a "prototype" of the problems of bio-ethics now before us and fated to grow in the future. Clearly and simply written, the text is available to a non-technical audience.

NEVILLE, Robert C. *The Cosmology Of Freedom.* New Haven Yale Univ Pr 1974.

This is an essay in systematic philosophy. The author's treatment of the concept of freedom is an integration of personal freedom and social freedom in one cosmological scheme. The work is divided into three parts. In Part I, "Freedom and Cosmology," Neville deals with freedom as an intellectual problem, the development of his cosmological scheme and then his general theory of value. In Part II, "Personal Freedom" the author seeks to apply this general theory of value to "External Liberties," "Intentional Action," "Freedom of Choice," and "Freedom in Creativity." In Part III the author focuses on "Social Freedom." In dealing with freedom to participate in society he examines "freedom of opportunity." The closing section

- seeks to clarify the principles which are political necessities for a participatory democracy in contemporary society.
- NEVILLE, Robert C.** Ehman's Idealism. *Rev Metaph* 17,617-622 Je 64.
In his article "On the Possibility of Nothing" (1963), Robert R Ehman considers two alternative conceptions of being. On one view, the being of a thing is construed as its whole nature or essence; on the other, being, characterized as "presence to consciousness," is seen as one property among others. On the latter view alone is something's not-being conceivable. The author of the present article contests Ehman's undialectical distinction between these two theories. His discussion focuses on Ehman's treating of being as an attribute, on his notion of "presence to consciousness," and on his neglect of being as inclusive context.
- NEVILLE, Robert C.** Man's Ends. *Rev Metaph* 16,26-44 S 62.
The author debates the problem of reconciling to one man's life a plurality of independent contexts of responsibility, each with its own ideal end. He first examines and rejects solutions variously proposing that what counts is not what one does but one's aesthetic style; that different contexts are appropriately obligatory at different stages of life; and that the individual must at least participate vicariously in all contexts. Unwilling to admit that human existence is tragic, he then suggests that conflicting ideal ends be put on different levels, such that the many obligations are specifications of the religious dimension.

- NEWHALL, David Havens.** Requiredness, Fact, And Value. *J Phil* 47,85-95 F 50.
This article suggests that a phenomenological study of "requiredness" leads to a satisfactory way of clarifying G E Moore's distinction of the difference between normative and non-normative properties. Requiredness is explained as a gestalt property which operates as a vector and functions normatively. The body of the article moves from a description of requiredness, a non-normative property, to being required, a normative property.

- NEWMAN, Fred.** The Origins Of Sartre's Existentialism. *Ethics* 76,178-191 Ap 66.
Understanding Sartre's ontology is necessary for understanding his ethics. The origins of existentialism are finally not ethical, but metaphysical, in an ontological relativism. When Sartre claims that man imposes form on the thing-in-itself, his position is essentially that of C I Lewis and W V O Quine. Applied to man, this ontology implies that man makes a concept of himself, a non-absolutistic one, in acting. Some actions are essence-making and cannot be morally judged, while others are made within a prior established framework and are subject to moral judgment.

- NEWMAN, James R** and Nagel, Ernest. *Gödel's Proof*. NY New York Univ Pr 1958.
Gödel's proof concerns whether it is, in general, possible to give a complete set of initial postulates for a deductive system, to "formalize" an entire area. So in Gödel your postulates get translated into sets of numerals, for instance containing some prime number larger than ten. You can then follow this prime number like a colored thread through the subsequent development of the theorems. It seems to follow from Gödel's results that no complete set of laws, such as a complete determinist "world formula," can ever be made.

- NEWMAN, Jeremiah.** *Studies In Political Morality*. Chicago Scepter 1963.
- NEWMAN, John Henry.** *The Philosophical Notebook Of John Henry Newman, Vol II*, Edward Sillem (ed). NY Humanities Pr 1970.
Newman's proof of God's existence is what is most philosophically novel and important in this work. Newman seeks to prove God's existence from the fact of conscience and not from facts in the world. To the extent that his proof begins internally or in consciousness it is similar to Anselm's proof. But it differs from the latter by beginning with consciousness of conscience and not consciousness of the idea of an all perfect Being. Newman holds that his proof is more convincing than other Theistic proofs in that it begins with an internal fact and not with an external fact. Its point of departure is hence more certain. In this respect Newman follows the Cartesian method.

- NICOL, Eduard.** The Return To Metaphysics. *Phil Phenomenol Res* 22,26-39 S 61.
The increasing research and accomplishments of the sciences are not only compatible with a fundamental crisis but are even one of its symptoms. The greater and faster the progress, the more fundamental the crisis; until a new theoretical frame has been found, in which the new facts can be arranged and ordered. The search for a new systematic frame is not the task of any particular science, but of philosophy. The problem of the foundation of science is not a scientific problem; science cannot establish its own foundations. Hence there must be common to all sciences a science of principles—metaphysics. The author thinks that a metaphysics of expression, (in

the phenomenological tradition), can reveal the foundations of metaphysics as the first science of Being and knowledge.

NICOL, E. Some Indications About The Metaphysics Of Expression. *Phil Phenomenol Res* 25,580-587 Je 65.

Metaphysics here is conceived as the science of principles and the return to origins (which sometimes involves the destruction of theoretical constructions). Nicol argues that philosophy has adopted two principles: that of contradiction and the Cartesian *cogito* or spiritual substance. He would like to get beyond the idealism/realism controversy, and he is opposed to subjectivism and relativism. He concludes that evidence is common, apodicticity is dialogical, and the foundation of truth needs to be ontologically necessary, and not sociologically contingent. However, the ontological possibility of communication remains a problem.

NICOLOFF, Philip L. *Emerson On Race And History: An Examination Of English Traits*. NY Columbia Univ Pr 1961.

A doctoral dissertation on Emerson's *English Traits*, "one of the most widely read [and]... enjoyed, and least discussed" of his works. The study consists of three parts: "The Setting"—includes two chapters; "Emerson's Theory of History and Race"—has three chapters on sources; finally, "Emerson's *English Traits*"—expands into eight chapters on "English Origins," various institutions, literature and a conclusion. An appendix deals with critical reaction to *English Traits*. Notes and bibliography are amply provided.

NIEBUHR, Reinhold. *Christian Realism And Political Problems*. NY Scribner 1953.

NIEBUHR, Reinhold. *Discerning The Signs Of The Times, Sermons For Today And Tomorrow*. NY Scribner's 1946.

NIEBUHR, Reinhold. *Faith And History, A Comparison Of Christian And Modern Views Of History*. NY Scribner's 1949.

NIEBUHR, Reinhold. *Man's Nature And His Communities: Essays On The Dynamics And Enigmas Of Man's Personal And Social Existence*. NY Scribner's 1965.

R Niebuhr summarizes and revises previously held opinions in social and political philosophy. He presents a point of view which is characteristically his own, one which was expressed earlier in *Moral Man and Immoral Society* and *The Children of Light and the Children of Darkness*, viz. that collective self-regard of class, race, and nation is more stubborn and persistent than the egoism of individuals. His revision of his earlier opinions is two-fold: a development from a purely Protestant viewpoint to an increasing sympathy for the Jewish and Catholic traditions within Western culture, and an increased appreciation of the secular disciplines, which he employs to analyze and criticize a society open to various religious traditions.

NIEBUHR, Reinhold. *Pious And Secular America*. NY Scribner 1958.

NIEBUHR, Reinhold. *The Children Of Light And The Children Of Darkness, A Vindication Of Democracy And A Critique Of Its Traditional Defence*. NY Scribner's 1944.

NIEBUHR, Reinhold. *The Nature And Destiny Of Man: A Christian Interpretation*. NY Scribner's 1941.

NIEBUHR, Reinhold. *The Self And The Dramas Of History*. NY Scribner 1955.

Inspired by Martin Buber's *I and Thou*, the author holds that the self is neither mind nor body, but rather the "I" which engages in dialogues with itself, with its fellows, and with God. Philosophers and scientists are criticized for their "reductionism" with regard to the self, and the Hellenic tendency to view history and the self as "structured artifacts" is rejected. The author calls for renewed allegiance to the Hebraic heritage of Western culture, and for a more religious view of the self and its role in history.

NIELSEN, H A. *Methods Of Natural Science: An Introduction*. Englewood Cliffs NJ Prentice-Hall 1967.

This short book presents an elementary discussion of the distinction between deduction and induction, the analysis of causation, the logic of explanation, and the structure and use of theories. The methods of Aristotle, Bacon, Descartes and Mill are briefly examined. The book culminates in a defense of the distinction between scientific and Socratic concerns (man's relation to God). The author claims: "By dividing our domains of concern into scientific and Socratic, it is possible to exhibit the latter as a domain in which the methods of natural science, except insofar as they coincide with straight thinking in general, are of no avail."

NIELSEN, Kai. *Ethics Without God*. Buffalo NY Prometheus Books 1973.

The thesis of this work is that morality cannot be based on religion. "If anything the opposite is partly true, for nothing can be God unless he or it is an object worthy of worship and it is our own moral judgment which decides such worth." The author argues "that there is no evidence whatsoever for the existence of God," and that "there are no grounds for claiming that a man's life is without purpose if there is no God." The intrinsic values, happiness, self-consciousness, and a sense of identity, are still possible even if "God is dead." The author also argues that "the implications of a Christian absolutism are more likely to be monstrous than are those of a consequentialist secular ethic."

NIELSEN, Kai. Appraising Doing The Thing Done. *J Phil* 57,749-759 N 60.

The author argues against conventionalism, developing the thesis that while morality involves social practices, there remain generally acknowledged ways of appraising them. In appraising practices, he claims, we are asking what kind of practices are in the general welfare or generally serve human well-being.

NIELSEN, Kai. Conventionalism In Morals And The Appeal To Human Nature. *Phil Phenomenol Res* 23,217-231 D 62.

Can a reasonable case be made for the claim that moral rules and principles are merely rationalizations of custom? The author answers no. A conventionalist would argue that morality is certain conventions, social rules and attitudes, etc., but if this is so, any effort to establish the soundness or truth of moral claims would be futile. It is concluded that there is an important link between our human natures and our morality, but it has not been shown that we have the rule of right within. Understanding morality is not just understanding ourselves.

NIELSEN, Kai. On Being Moral. *Phil Stud* 16,1-3 1965.

John Hospers, among others, argues that if one knows clearly how he ought to act the question of what reasons can be given for doing what he acknowledges he is morally required to do is a spurious question. The author argues that Hospers' view only shows that if one *is reasoning morally* then no further justification is needed for doing what one reasons one ought to do. He further argues that in any specific case it is logically impossible that there could be any non-question-begging grounds for adopting either the moral or self-interested point of view. However, he concludes, there may be objective reasons for adopting the moral point of view as an overall life policy.

NIELSEN, Kai. On Morality And Convention. *Phil Phenomenol Res* 24,252-259 D 63.

Nielsen argues that one should always distinguish between the moral point of view and the vantage point of self-interest. He spends much time criticizing Falk's distinction between primary and mature morality. Nielsen does not think that moral philosophy has existed only to dispute the fact that there is no definite, rule-governed morality! morality for him is made up of conceptual distinctions.

NIELSEN, Kai. Religion And The Modern Predicament. *Humanist* 18,25-36 Ja-F 58.

NIELSEN, Niels C. *Religion And Philosophy In Contemporary Japan*. Houston Rice Institute 1957.

This study offers a comprehensive survey of religions, ideological and philosophic movements in Japan during the period following World War II. Shintoism, Buddhism and Christianity are distinguished as the dominant religious doctrines. The most prominent feature of the postwar era is said to be the emergence of a large number of new sects, highly organized, "unabashedly practical." Three hundred and seventy-one religious bodies are now officially registered in Japan. Academic philosophy is predominantly Buddhist or Hegelian.

- NIETMANN, William D.** Seneca On Death: The Courage To Be Or Not To Be. *Int Phil Quart* 6,81-89 Mr 66.
- Through Seneca more than any other individual a Stoic thread has been woven into western culture. Seneca is a man-in-the-street's philosopher, but this fact is no warrant for not taking him seriously. One of his principal themes, his preoccupation with death, is current among existentialistic philosophers. Seneca's concern for death can be brought into focus by the question, "What bearing does the inevitability of death have upon the need to live?" According to Seneca, whether or not we survive death, death occasions no harm for us. The problem that death sets for life is simply the problem of learning to live with death. "Every day," the Córdoba wrote, "ought to be regulated as if it... rounded out and completed our existence." It is philosophy that can teach us to die as one of the duties of life.

- NOBLE, David W.** *The Paradox Of Progressive Thought.* Minneapolis 1958.
- The approach of this volume is based upon C Becker's *The Heavenly City of the Eighteenth-Century Philosophers*. It analyzes the climate of opinion shared by certain American liberals and progressives in the 1880-1920 period. Considerable attention is given to the underlying philosophic beliefs of such men as T Veblen, W Rauschenbusch, S Patten, C H Colley, and H D Lloyd. Professor Noble's account of the paradox of progressive thought is a complex matter; one aspect is the progressives attacked earlier absolutisms with relativistic weapons, only to reinstate a new absolutism.

- Mr Nolte's study of Lessing's *Laokoon* not only presents the reader with that work's essential ideas but also with a criticism of them which is both shrewd and creative. Its shrewdness lies in its selection of arguable points, its creativity in its stimulation to further reflection.
- NOON, Wm T.** *Joyce And Aquinas.* New Haven Yale Univ Pr 1957.
- NOONAN JR, John T.** *The Scholastic Analysis Of Usury.* Cambridge Harvard Univ Pr 1957.
- It is well known that moral views on the taking of interest on a loan have undergone much change. Generally, mediaeval ethics regarded this practice as immoral because the usurer charged for a use of money which he did not actually lose. Modern moralists usually condemn only the taking of excessive interest. What happened in the evolution of economic life, banking practice, canon and civil law, and ethico-religious attitudes, is told in great detail in this book. Noonan (a Boston lawyer with a doctorate in Scholastic philosophy) covers in detail the Catholic writings on usury, from 1150 onward. However, he does not omit the background in ancient religious and philosophic thought; nor does he overlook later non-Scholastic and non-Catholic positions on usury. It becomes quite clear that, in the later Middle Ages, a new use for money (investment) was discovered; this necessitated a more complicated and a different moral judgment on usury. The book is thoroughly annotated and has a bibliography of source materials.

NORTH, Helen. *Sophrosyne: Self-Knowledge And Self-Restraint In Greek Literature.* Ithaca NY Cornell Univ Pr 1966.

This book is a detailed and thorough study of the virtue of *sophrosyne* based on careful examination of the extant literary sources. The basic theme of the book is discussed in the light of the moral and intellectual virtues associated with *sophrosyne* throughout its various stages of development and redefinition in ancient history. The author traces the concept of this excellence from its first appearance in Homeric poetry and other heroic writers, through tragic literature, the age of the Sophists, Xenophon and the minor Socratic schools, the orators of the fourth century, Plato and post-Platonic philosophers, to the Hellenistic age, and Roman and Patristic writings, when it was transformed into a Christian virtue. The reasons for the changes of meaning are discussed in the light of political, social, religious, and economic conditions, or other special interests. One of the persistent themes is the polarity between *sophrosyne* and its opposing kind of conduct, and the attempts at different periods to reconcile the two. A central aim is to show that the concept of *sophrosyne* is neither negative nor reducible to mere cautiousness.

NORTHROP, F S C. *Man, Nature And God, A Quest For Life's Meaning.* NY Simon & Schuster 1962.

This intellectual autobiography reviews the central ideas of a lifetime of thinking in science, history of science, anthropology, theory of concepts, and religions East and West in order to sketch a naturalistic world-view compatible with the radical new developments of this century. It is in large part an organization of articles and addresses, originally printed in out-of-the-way places, presented in the intimate and inimitable style of the author.

NORTHROP, F S C. *The Meeting Of East And West, An Inquiry Concerning World Understanding.* NY Macmillan 1946.

Professor Northrop develops his own thesis and that of his confreres in a stimulating work that surveys our contemporary scene. His thorough familiarity with the important phases of mathematical physics and with modern schools of art enables him to present a synthesis of world views that is provocative for anyone at all concerned with the possibilities for the world of today and tomorrow. After critically delineated the philosophic meaning of the cultures of many countries, Northrop presents his synthesis in an extended exposition of his epistemological solution in a two-termed relation of epistemic correlation that comprehensively includes both the aesthetic component and the theoretic component, the respective emphases of East and West.

NORTHROP, F S C. *The Taming Of The Nations: A Study Of The Cultural Bases Of International Policy.* NY Macmillan 1952.

Northrop examines international tensions as difficult problems that must be solved if the socio-philosopher is to fulfill his responsibilities. He urges that we must first define the cultural differences involved basically in these international differences, and once having stated them, it should be possible to come close enough to a solution to these problems to at least provide for a kind of peace through acquiescence in the operation of mutually agreed-upon laws.

NORTHROP, Filmer Stuart Cuckow (ed) and Livingston, H H (ed). *Cross-cultural Understanding: Epistemology In Anthropology.* NY Harper & Row 1964.

This book is the publication of the seventeen papers of a 1962 symposium sponsored by the Wenner-Gren Foundation for Anthropological Research, together with records of some of the discussions. Experts in fields as diverse as cybernetics and the history of Greek science converse. Although the papers treat technical topics, the treatments are not technical. Questions such as the possibility of one culture understanding another have practical overtones, being a prelude to finding means for dealing with international problems. Professor Northrop's two chapters are adhesive, and relate contributions concerned with more general issues, like communication theory, and those concerned with specific topics such as the virtually tenseless Burmese language and contract law.

NORTHROP, Filmer Stuart Cuckow. *Complexity Of Legal And Ethical Experience: Studies In The Method Of Normative Subjects.* Boston Little Brown 1959.

NORTHROP, Filmer Stuart Cuckow. *Ideological Differences And World Order: Studies In The Philosophy And Science Of The World's Cultures.* New Haven Yale Univ Pr 1963.

NORTHROP, Filmer Stuart Cuckow. *The Logic Of The Sciences And The Humanities.* NY Macmillan 1947.

NORTHROP, S F C. *Philosophical Anthropology And Practical Politics.* NY Macmillan 1960.

Northrop appraises several recent findings in the natural and social sciences, particularly cultural anthropology, sociological jurisprudence, and neuro-physiological psychology, submits them to epistemological analysis, and attempts to arrive at some empirically verifiable concepts of what human beings and nations are. There is an attempt to apply this theory and the political methods which it prescribes to the descriptive and suggested solution of some world political problems. Among the issues discussed are political methods and their basis, the meaning and methods of any free people, the basis of world law, and a great number of practical problems in current events.

NORTON JR, William J. *Bishop Butler, Moralism And Divine.* New Brunswick NJ Rutgers Univ Pr 1940.

Many have written on Butler's religious views, and many on his moral outlook. A few have tried to recast his ethical or religious views in terms of the thought prevailing during his age, and one writer, E C Mossner, who is nowhere mentioned by Mr Norton, has notably studied Butler as an index to the intellectual climate of his day. Relatively little difficulty is involved in tracing out Butler's religious philosophy, since he largely systematized it in a single treatise, but he made no comparable effort to draw together the lines of his ethical philosophy, and none at all to write coherently on the nature and interrelations of the philosophic disciplines. Moreover, the carrier of his thoughts on ethics did not lend itself readily to proper balance. Consequently, there has been a considerable variety of interpretations of such thoughts, issuing at times in a piecemeal division of his interests. All these efforts have succeeded admirably, whether by explication or by implication, in emphasizing the need for constructing Butler's entire philosophy in the light of its internal features.

NOTA, John H. "The Development Of Max Scheler's Philosophy Of Religion" in *The Papin Festschrift*, 253-268. Villanova PA Villanova Univ Pr 1976.

It is impossible to describe any issue in Scheler's philosophy without taking into account the development of his thought. So we have also to distinguish at least three periods in his philosophy of religion—before 1912, between 1912-1922, from 1922-1928. There is continuity and discontinuity. The most explicit and best elaborated philosophy of religion we find in *On the Eternal in Man*. He remains, however, very much concerned about philosophy of religion in his final period of sociology of knowledge, metanthropology and pantheism.

NOVACK, George Edward. *Humanism And Socialism.* NY Pathfinder Pr 1973.

NOVACK, George Edward. *Pragmatism Versus Marxism: An Appraisal Of John Dewey's Philosophy.* NY Pathfinder Pr 1975.

The book examines the background of pragmatism, the motive forces in its development, the reasons for its peculiar traits, and the causes of its rise to supremacy. The author gives a detailed criticism from a Marxist point of view of Dewey's conceptions of nature and science, logical method and theory of knowledge, theories of society, education and ethics. The author concludes that "as a method of thought and a movement of ideas, instrumentalism is out of step with the march of world events and has more and more fallen behind the latest developments in science and society, above all in the science of society...."

NOVACK, George. *The Origins Of Materialism.* NY Merit 1965.

This is the only history of ancient Western materialism by an American. Unlike Frederic Lange's work on materialism which is more comprehensive, since it covers the history of this ancient philosophy to the nineteenth century, it is written by a man who understands and believes in the spirit of his subject. The city of Miletus is given a needed boost as the mother-city of Western philosophy. Novack shows how it provided much of the background for the work of Thales and Anaximander. Despite the topic, the contributions of the great idealists are noted. The final chapter is on Lucretius and Lucian (born a Syrian) who moved to skepticism and agnosticism to prepare the way for the eclipse of materialism in the classical world.

NOVAK, Maximilian E. *Defoe And The Nature Of Man.* NY Oxford Univ Pr 1963.

NOVAK, Michael (ed). *American Philosophy And The Future: Essays For A New Generation.* NY Scribner 1968.

NOVAK, Michael. *A Time To Build.* NY Macmillan 1967.

Inherited cultural symbols have been shattered, resulting in a rootlessness and restlessness which can be the source of a new authenticity. But this requires "the hard work of seeking, defining, and establishing what are authentic human values in our time." The time of tearing down is over; now is the time to build a new civilization of freedom, truth, justice and love. Christianity and Judaism, with roots of wisdom in the past and hope for a new age in the future, insist on man's responsibility in the present. Both can contribute to making the world more human. Youth's emphasis on identity and community offers another valuable orientation.

NOVAK, Michael. *Ascent Of The Mountain, Flight Of The Dove.* NY Harper & Row 1971.

Religion is a root intention, an ultimate, unifying, comprehensive, meaning-giving drive to question. That drive presents choices. We must choose, act. Actions both reveal and create our identity, our life story. Stories—senses of reality, ways of acting; ways of perceiving self, others, the world—are given to us by culture, society, institutions, organizations. But we can choose our own story more freely by developing and exercising intelligent subjectivity, that is, by engaging in religious studies—a conversion from standpoint to standpoint, and an articulation of that conversion, that voyage of the human spirit.

NOVAK, Michael. *Belief And Unbelief: A Philosophy Of Self-Knowledge.* NY Macmillan 1965.

"How does belief differ from unbelief?" Each has roots entangled in the primary question of self-identity. A solution is found in "elucidating those experiences of human intellectual life in which belief in God is rooted." This 'intelligent subjectivity' leads to self-knowledge through an inquiry into the way one inquires. Four activities are operative in inquiry: awareness, insight, reflective consciousness, and the unstructured, unlimited, objective, unifying drive to understand (which is the root of belief). One's epistemology is the critical choice; it conditions the answer to all questions, including the intimately related "Who am I?" and "Is there a God?"

NOVAK, Michael. *The Experience Of Nothingness.* NY Harper & Row 1970.

NOVAK, Michael. A Key To Aristotle's 'Substance'. *Phil Phenomenol Res* 24,1-19 S 63.

How could Aristotle identify essence with substance, if essence is universal and substance is particular? The key is his notion of human knowing, involving a movement from observation through inquiry to affirmation. Essence is what makes the individual both what it is and knowable. Substance is 1) "the what-IS-it-grasped in concrete data and able to be affirmed in true judgment, but *still as concrete*"; and 2) "conceptualized apart from its concrete instantiations, it is universalized." Substance is the crux between experience and science; it is the affirmed unity of particular and universal. Lonergan's understanding of Aristotle is the model for this analysis.

NOVAK, Michael. Toward Understanding Aristotle's Categories. *Phil Phenomenol Res* 26,117-123 S 65.

It is maintained that three positions must be assumed in order to interpret the first five chapters of Aristotle's *categories*. This includes the meaning and role of "present in a subject." These positions are: 1) a rejection of univocity, 2) a dual conception of accident, 3) the principle of discrimination. There are some comments on Aristotle's attempts to work out a notion of science that would account, at the same time, for the flux of individuals and the necessity and universality proper to science. It is concluded that within the individual or the concrete, particular present, is grasped the necessity required for science. Also, from insight flows the concept or definition, which is the universalization of the insight.

NOXON, James. Hazlitt As Moral Philosopher. *Ethics* 73,279-283 Jl 63.

William Hazlitt's examination of the controversy between proponents of self-interest and benevolence is original and provocative. He argues that the human mind is naturally disinterested, or is interested in its own welfare in precisely the way it is interested in others', basing his claim on a theory of personal identity. Central is his

notion that we stand in the same relation to our own future selves as to others, since our own future interest and others' are known equally via imagination. Also important is Hazlitt's notion of freedom, likewise derived from his analysis of personal identity.

NOXON, James. Hume's Agnosticism. *Phil Rev* 73,248-261 Ap 64.

Noxon examines Hume's *Dialogues Concerning Natural Religion* and compares it with passages in the *Enquiry*, trying to determine Hume's position on the existence of God. He concludes that Hume's position was not that of either Cleanthes or Philosophy. It was agnosticism; all theological argument, Hume felt, was futile.

O' BRIEN, D O. *Empedocles' Cosmic Cycle: A Reconstruction From The Fragments And Secondary Sources.* NY Cambridge Univ Pr 1969.

The author has made an exhaustive study of Empedocles' basic doctrines that relate to the interpretation of the theory of the cosmic cycle. Separate chapters are given to the examination of evidence and problems raised by such central topics as rest and movement, speed, time, the place of Love and Strife, the shape of Love and Strife, the arrangement of the fully separated elements in concentric spheres, the cyclic system of alternate worlds of increasing Love and increasing Strife, the zoogonical stages exhibited under conditions of prevalence of either Love or Strife. In a concluding chapter, the author discusses the significance of the cosmic cycle in the development of Greek philosophy.

- O' BRIEN, Michael J.** *The Socratic Paradoxes And The Greek Mind.* Chapel Hill Univ Of N Car Pr 1967.
This is a specialized study of Plato's ethical theory; the author examines the Socratic paradoxes that virtue is knowledge and that no one voluntarily does evil by viewing them in the light of Plato's doctrines presented here systematically and compressed through careful selection from the relevant dialogues. These paradoxes require for their study, as the author shows, the full context of Plato's thought, for when detached from it they seem to fall into nonsense. The author discusses Plato's background against the appropriate currents and developments of Greek "intellectualism," reaching back to Homer, Hesiod, the historians and tragedians. The bulk of the book is given to an examination of Plato's ethics. The view maintained is that since the ethical doctrines constitute a unified whole, the antithetical statements of the Socratic paradoxes cannot be contradictory but only complementary. The guiding principles of his interpretation are discussed in the introduction. There is a bibliography and an index of authors, topics, passages cited, and Greek words.

- O' CONNER, D J.** *An Introduction To The Philosophy Of Education.* NY Philosophical Lib 1957.
This book is an interesting and well-written attempt to direct the light of contemporary British linguistic analysis into the recesses of educational theory. Though such illumination may be needed there, the book will be of more interest to philosophers than to educators; O'Conner limits himself to an elementary account of recent philosophical developments in areas broadly relevant to educational theory such as the nature of moral discourse and the nature of explanations and hypotheses.
- O' CONNOR, D J.** *Free Will.* NY Doubleday 1971.
The book is intended as an introduction to the subject. The tendency of the argument is slightly favourable to determinism but the issue is left open. The author recognizes that what the advocate of free will really means to say is not that free acts are uncaused but that they are caused by the self in a peculiar way and does not see how to give a clear account of this kind of causation. He rejects the attempt to distinguish events essentially from other happenings, and the argument that if determinism were true rational deliberation would be impossible, rational judgement being on the contrary determination by reason. He even goes some distance in defending the doctrine of purely physical determination by brain-states.

- O' CONNOR, D J.** Philosophy And Ordinary Language. *J Phil* 48,797-808 D 51.
This article deals with the question, "How far are philosophical questions, questions of language?" Norman Malcolm's "Moore and Ordinary Language" is critically examined by the author, who finds Malcolm's theory is restricting. Malcolm agrees with Moore in the belief that statements such as "There are no material things" can be refuted because they go against ordinary language.
- O' CONNOR, Daniel D.** John Macmurray: Primacy Of The Personal. *Int Phil Quart* 4,464-484 S 64.
A critical study of the thought of the contemporary Scottish philosopher John Macmurray. The main thesis proposed for investigation is that reality is understood most concretely and most adequately in terms of the personal. Also examined are the claims 1) that personalism is able to overcome the dualisms which beset its chief alternatives, the philosophies of mechanism, and organism, 2) that personalism provides a way of reconciling the diverse claims of religion, art and science in the exploration of reality, and 3) that recognizing the primacy of the personal gives us access to ethical norms for private and public behavior.

- O' CONNOR, William Richard.** *The Eternal Quest; The Teaching Of St Thomas Aquinas On The Natural Desire For God.* NY Longmans Green 1947.
This work seeks to resolve an interesting problem in the philosophy of Thomas Aquinas. How is it possible to maintain, as Thomas did, that every intellect by nature desires a vision of what is above nature, viz., God? The author's thesis is that Thomas's meaning has been obscured by his followers, principally by the commentators of the sixteenth and seventeenth centuries. The conclusion of the book is that Thomas meant by his "natural desire" for a vision of God no more than a desire for increased knowledge of God once the intellect is convinced that God exists. Contradictory interpretations arose largely because the vision of God here spoken of came to be identified with the supernatural "beatific vision."

- O' MEARA, William.** Actual Existence And The Individual According To Duns Scotus. *Monist* 49,659-669 O 65.
O'meara sets out to clarify in Duns Scotus what has long puzzled non-scholastic philosophers (most recently John Passmore and Sidney Hook): the relation of individuality and existence in material substances. By way of distinguishing "act" from "action" and examining the relation between "existence" and "essence" he explains the notion of existence as the ultimate act of existing material substances and Scotus' denial of actual existence as the basis of a thing's individuality.

- O' NEILL, John (ed).** *On Critical Theory.* NY Seabury Pr 1976.
This collection of twelve essays deals with critical theory, primarily as developed by the Frankfurt School. The major figures considered include Theodor W Adorno, Max Horkheimer, Jürgen Habermas, Walter Benjamin, and Herbert Marcuse. The essays provide general insight into the character and historical development of critical theory and the relation of critical theory to a variety of other theories, e.g., Marxism, positivism, phenomenology, structuralism, and linguistic philosophy. Specific topics discussed by the authors include the aesthetics of Benjamin, the aesthetic and liberation, history and freedom, identity theory, the dialogue between Habermas and Hans-Georg Gadamer, the problem of sense as debated by Habermas and Niklas Luhmann, Karl Popper's *The Open Society and its Enemies*, and the linguistic turn of Habermas.
- O' NEILL, John.** Alienation, Class Struggle And Marxian Anti-Politics. *Rev Metaph* 17,462-471 Mr 64.
The author notes that militant Marxism is obligated to implement its transcendent ethical vision through the political process and argues that the unity of Marxian social theory is thereby sacrificed. In support of his position, he first criticizes R C Tucker's psychologistic interpretation of Marx's thought and discusses Marx's relationship to Hegel. He then presents the Marxian category of action as a creative expression of human personality and concludes that the individual is paradoxically the locus of the void separating Marxian ethics and politics.
- O' NEILL, John.** Marxism And Mythology. *Ethics* 77,38-49 O 66.
This critical review of R C Tucker's *Philosophy and Myth in Karl Marx* takes issue with its thesis that Marx's *Capital* is largely moral myth, is based upon a mythological psychology, does not achieve the status of genuine social science, and that the philosophical core of Marx's philosophy is a moral concern with a kind of self-alienation which is actually the same as pride in the Judeo-Christian tradition. Tucker wrongly believes that alienation is a personal problem to be resolved as a neurosis must be resolved. Tucker's book, like some other humanistic interpretations of Marx, unnecessarily distorts or dispenses with core Marxist ideas.

- O' SHAUGHNESSY, Brian.** Observation And The Will. *J Phil* 60,367-392 Jl 63.
The impossibility of observing one's own actions is inferred on two counts: (1) If the only objection were one against simultaneity of actions, we should speak of two distinct selves, neither of which is oneself, so we would not have an example of oneself observing one's own actions, and (2) Since these dual selves are internally related, it is a necessary proposition that the observer-self observe the actions of the agent-self, but this seems too gross a departure from usage to be described as the observation by one self of the acts of another self.

- OAKLEY, Francis.** *The Political Thought Of Pierre D'Ailly: The Voluntarist Tradition.* New Haven Yale Univ Pr 1964.
Pierre d'Ailly (1350-1420) was a leading Ockhamist theologian. This book, "directed chiefly to historians," discusses his Ockhamist nominalism and voluntarism and concludes that it led to "a radical reinterpretation of the nature of natural law" and

"a shift in political thinking." The Latin text of one of d'Ailly's two principal Conciliar tracts, the *Tractatus de materia concilii generalis*, is included in full.

OATES, W. J. *Aristotle And The Problem Of Value*. Princeton NJ Princeton Univ Pr 1963.

Aristotle's rejection of the Platonic ideas robbed him of Plato's unity of Being and Value as well. By an extensive, clear interpretation and analysis of the whole Aristotelian corpus, Oates shows that Aristotle lacks a coherent theory of value. While considerations of value unavoidably occur in the *Metaphysics*, just as ontological ones do in the *Ethics*, nowhere in Aristotle is there a unification of axiology and ontology. For this reason, Oates argues, the *Nicomachean Ethics* fails to be a theory of moral good.

OATES, Whitney J. *Plato's View Of Art*. NY Scribner's 1972.

The author contends that Plato's philosophy of art has been misinterpreted. It is widely held that Plato was hostile to art. Evidence for this interpretation is taken from *The Republic*. In opposition, the author demonstrates by citing passages from the *Greater Hippias*, the *Ion*, the *Phaedrus* and the *Symposium* that the creative artist is a "philosopher." The creative artist's search for Beauty, which is indistinguishable from the Good, is a most valid activity since it is oriented toward the realm of Ideas. The artist as philosopher is also quasi-mystic, by the way in which he apprehends the Ideas.

OBBERMAN, Heiko Augustinus. *The Harvest Of Medieval Theology: Gabriel Biel And Late Medieval Nominalism*. Cambridge Harvard Univ Pr 1963.

Though directed to the theologian and historian, this work in the scholarship of late medieval nominalism sheds light on the thought of Aquinas, Duns Scotus, Gabriel Biel and William of Occam as well as the basic themes of the Reformation, Counter-Reformation and Renaissance. Very full discussions of mysticism, Mariology, the nominalistic interpretation of the relation of Scripture, Tradition and Church, a glossary of concepts, terms and expressions, very extensive documentation, lengthy quotations, many cross-references and a twenty-five page bibliography are main features of the work. Chapters Two on Prolegomena, Three on Faith and Understanding, and Four on Natural Law as Divine Order, are of particular interest to philosophers; but throughout in many details and in the unity of the interpretation the work contributes to a deeper understanding of medieval philosophy.

OBBERMAN, Heiko Augustinus. Duns Scotus, Nominalism, And The Council Of Trent. *Stud Phil Hist Phil* 3,311-344 1965.

ODEGARD, Douglas. The Discovery Of Analytic Truth. *Phil Phenomenal Res* 26,248-252 D 65.

If we regard an analytic investigation as something distinct from a mere description of how a specific word is used, and if we regard it as an attempt to provide an exact analysis, either partial or complete, of whatever it is investigating, then it may seem doomed to being either false or uninformative. Its truth implies an identity of sense, in addition to an identity of reference, and the former identity apparently sanctions unlimited substitution without a change in truth value, one consequence of which is that an analytic philosopher must already know whatever he purportedly discovers. Appearances are misleading here, however. It is possible to draw further distinctions within the allegedly homogeneous area of sameness in sense, such that in the relevant sense, sameness in sense does not justify universal interchangeability and therefore does not render true analyses automatically trivial.

ODEGARD, Holtan P. *Sin And Science: Reinhold Niebuhr As Political Theologian*. Yellow Springs OH Antioch Pr 1966.

The author critically examines Reinhold Niebuhr's political philosophy of "dialectical democracy," regarded in some quarters as an alternative to the political positions of Martain and Dewey, and finds Niebuhr's "salvation ethics" centered upon "one determined absolute—original sin" and hence "inimical to the attempt of practical men to develop a working science of morals." A postscript entitled "Notes on Conservative Tendencies" finds Niebuhr conservative in influence despite his earlier radicalism and "present advocacy of radical though gradual changes" in the social order.

ODOM, Herbert H. The Estrangement Of Celestial Mechanics And Religion. *J Hist Ideas* 27,533-548 O-D 66.

The author examines the changing relationship between celestial mechanics and religion during the Enlightenment. He finds that critics often claim that although Newton thought his discoveries confirmed religion, his theories encouraged a split between science and religion. The author examines Newton's writings on religion, judging them filled with natural theology, though not specifically Christian. The correspondence between Leibnitz and Samuel Clarke is also examined, as well as the

views of lesser known authors. The author concludes that the breakdown between science and religion eventually occurred in France, where a Cartesian tradition enabled science to be seen as a viable example of man's progress apart from God.

OESTERLE, John A. *Ethics: The Introduction To Moral Science*. Englewood Cliffs NJ Prentice-Hall 1957.

The aim of this introductory text is to recapture ethics as it was conceived by Aristotle's *Nicomachean Ethics* and St Thomas: "A practical science based on reasoning from common experience." Ethics is said to deal with the deliberative will, virtue, and the ultimate natural end of man; and as such it "is adequate to attain truths about the natural moral order." Ethics throughout is held to be independent of "revealed moral theology," even though it is an introduction to it, "moral science," and politics. Each chapter of this book concludes with review questions and suggested readings.

OLIVER, James H. *Demokratia, The Gods, And The Free World.* Baltimore Johns Hopkins Pr 1960.

In the history of human social organization, liberty, equality and the rule of law are not natural events but achievements that had to be won against the more natural tendency of dominating personalities to exercise power for themselves. The modern development of a philosophy of liberty has been told many times, but this philosophy would not have been possible without its classical antecedent in the concept of the free citizen... a concept developed by the Greeks and extended by the Romans. This book draws together the scattered evidence to uncover some of the means by which that idea developed.

OLSCAMP, Paul J. Intra And Extra-Systemic Questions In Ethical Analysis. *Int Phil Quart* 5,66-79 F 65.

Mistakes in ethics occur when questions appropriately asked only within ethical systems, concerning justification of rules by reference to other rules of higher logical order, are asked in the attempt to justify principles of the systems. Questions appropriately asked within the system are called "intra-systemic"; those concerning the justification of principles are called "extra-systemic." But if ethical principles and rules cannot be justified by the same procedures, how can principles be justified? The distinction between reasons and causes fades in attempting to justify principles, and the best we can do is to give their historical antecedents. A possible pattern for the "justification" of principles, though not a complete one, may be found in the use of the Aristotelian concept of the "polis" or political community, as a causal explanation

of our use of certain principles, and I argue that this is the only way ethical principles can be justified.

OLSCAMP, Paul J. The Philosophical Importance Of C M Turbayne's "The Myth Of Metaphor". *Int Phil Quart* 6,110-131 Mr 66.

OLSCAMP, Paul J. Wittgenstein's Refutation Of Skepticism. *Phil Phenomenol Res* 26,239-247 D 65.

Berkeley argued that skepticism about the existence of the real world is only justified if we assume that our perceptions are representative of something not in principle perceivable, and that we can therefore never verify judgments of perception. By showing that the concept of Material Substance is either meaningless, or if there is such a thing, that we cannot know that there is, Berkeley showed that any theory based upon the assumption of the relevance of Material Substance to the truth or falsity of our judgments of perception is unjustified. Skepticism about the truth or falsity of third-person sensation sentences is only justified if we assume that "inner processes," in principle unperceivable to the observer, are relevant to the criteria for determining whether or not such sentences are true. I argue that Wittgenstein tries to show that they are not possibly relevant to such criteria, and that he therefore accomplishes a "Refutation of Skepticism" similar to Berkeley's, though in a different area of investigation.

OLSCHEWSKY, Thomas M. A Third Dogma Of Empiricism. *Monist* 49,304-318 Ap 65.

The reference-orientation of positivism is a third dogma of empiricism. It is the assumption that man is a spectator standing once against his world, with truth and meaning dependent upon a referential relationship to that world. This orientation underlies not only Quine's *Two Dogmas* but the subject/object bifurcation in epistemology and the fact/value bifurcation in axiology. It arises historically out of the combination of empirical inquiry with a tacit metaphysical dualism. The pragmatic tradition opposes this with a use-orientation which precludes these several dogmas by taking intentional action as its starting point. The dogmas themselves have come under attack through recent developments in logic, philosophy of science and psychology. The use-orientation avoids these difficulties and thus presents a better framework for inquiry.

OLSON, Raymond (ed) and Paul, Anthony M (ed). *Contemporary Philosophy In Scandinavia.* Baltimore Johns Hopkins Pr 1972.

This collection of philosophical papers by writers from Denmark, Finland, Norway and Sweden constitutes a thorough introduction to recent thought in contemporary philosophy. The contributions are printed under three heads: I) Logic, Philosophy of Language, Epistemology, and Philosophy of Science; II) Ethics, Political and Legal Philosophy; III) Philosophy of History and Interpretive Studies.

OLSON, Robert G. *An Introduction To Existentialism.* NY Dover 1962.

This book presents a systematic statement of existentialism. It focuses on issues and arguments rather than historical treatment. Among the topics discussed are: value, the human condition, reason and unreason, freedom, authenticity, the other, and death. Olson attempts to uncover the arguments used by existentialists to support their positions, and he also examines some of the key criticisms that have been raised against them by opposing philosophical schools.

OLSON, Robert G. *The Morality Of Self-Interest.* NY 1965.

Olson's "principal contentions are that questions of personal ethics cannot... be divorced from questions of social policy; that an act cannot be considered right unless it promotes the well-being of both the agent and society; that the individual is most likely to contribute to social betterment by rationally pursuing his own best long-range interests; that rational procedures of the kind employed in the empirical sciences are in principle competent to define moral terms and determine the truth or falsehood of moral judgments; and that prevailing religious views, far from being conducive to moral uprightness, in fact seriously undermine the practice of morality." The Author holds that an individual's deliberate disregard of conventional moral rules may sometimes advance the general welfare, that empirical knowledge is relevant to the moral life, that moral problems can in principle be resolved by the practice of rationality, that rational pursuit of self-interest should be encouraged by moral sanctions, and that, on the whole, traditional religious views are "inimical to the practice of morality."

OLSON, Robert G. A Naturalistic Theory Of Conscience. *Phil Phenomenol Res* 19,306-322 Mr 59.

According to traditional non-naturalistic interpretations, conscience is a distinct faculty endowed with knowledge of right and wrong and capable of competing with desire in influencing conduct. Here, desire is personal and conscience is impersonal. The author presents a naturalistic theory which accounts for moral experience just as well, and explains the conflict between conscience and desire, the motivation of heroic acts of self-sacrifice and the role of the social reformer. "Desire," "compulsion" and "habit" are key terms and are analyzed as the basic motivational factors.

ONG, Walter J. *Ramus, Method And The Decay Of Dialogue; From The Art Of Discourse To The Art Of Reason.* Cambridge Harvard Univ Pr 1958.

This book seeks to present the doctrines of Ramus in their historical setting. The account begins with the story of Ramus' career and the reforms for which he was responsible. Following that the background against which Ramus' thinking developed is presented in some detail. The humanistic, scholastic, and philosophical teachings of Ramus' day and the years before are considered, with close attention paid to the work of Peter of Spain and Rudolph Agricola. The main body of the book is devoted to the exposition of Ramus' thought: his dialectic and his logic, his replies to the attacks of Gouveia and Charpentier, his rhetoric, and his method. A thorough discussion of the general interest in and the search for an adequate method is entered into.

OPPENHEIM, Felix E. *Dimensions Of Freedom: An Analysis.* NY St Martin's Pr 1961. A behavioral analysis of the concept of "social freedom" which signifies certain relationships of interaction as exemplified in the expression "With respect to one actor, another actor is free to act in a certain way." The concept of action is the building block of the author's explicative definition of freedom which also includes analyses of concepts of control, unfreedom and power. The author relates social freedom to other types of freedom, and shows how it is empirically meaningful to say there is more or less freedom: the "dimensions of freedom." He concludes with an explication of what it means to value freedom.

OPPENHEIM, Felix E. Control And Unfreedom. *Phil Sci* 22,280-288 O 55.

OPPENHEIM, Felix E. Evaluating Interpersonal Freedoms. *J Phil* 57,373-383 Je 60. The author proposes some empirical laws as to people's value-attitudes toward freedom. His conclusions contradict the view that no matter what values men hold, the freedom to pursue these values is important to them. For instance, I may value a certain goal and yet be indifferent to my own freedom to pursue it, either because I am not able to, or because I value it so highly that my choice is a foregone conclusion, or because it is one of several competing goals among which it is so difficult to decide that I would rather be relieved of the burden of choice.

OPPENHEIM, Frank M. A Critical Annotated Bibliography Of The Published Works Of Josiah Royce. *Mod Sch* 41,339-365 My 64.

OPPENHEIM, Frank M. Royce's Community: A Dimension Missing In Freud And James? *J Hist Behav Sci* 13,173-190 1977.

This study aims at better appreciating the quality of Royce's contribution to

psychology. Josiah Royce (1855-1916) taught that social consciousness arises from ego-alter contrasts and is guided by taboos and, before George H Mead, by reciprocal gestures. A major Roycean contribution was his five conditions for coexperiencing consciousness of genuine community. Related to Freud (via Putnam), Royce did early work on "identification theory" and helped midwife psychotherapy's birth in America. Contrasting with William James's basic differentiation of consciousness according to the quality of its contents (feelings, thought, and conduct), Royce preferred a norm of increasing self-agency (shown in sensitivity, docility, and initiative). The temperaments of James as an artist and of Royce as a rational interpreter differentiated their approaches to psychology.

ORGAN, Troy Wilson. *The Hindu Quest For The Perfection Of Man.* Athens Ohio Univ Pr 1970.

This book is a systematic presentation of Hinduism in terms of four quests: for reality, for spirituality, for integration, and for liberation. The ideal of the quests is the perfecting man. The means are thought, action, devotion, and discipline. Hinduism is characterized as human catholicism.

ORGAN, Troy Wilson. Crito Apologizes. *Personalist* 38,366-371 Autumn-O 57.

This is a defense of the lifestyle of Crito as it appears in the dialogues of Plato. The essay is written as though Crito rather than Socrates was on trial before the Athenian jury.

ORGAN, Troy Wilson. The Intellectual Obligation To Be Moral. *Humanist* 16,273-277 D 56.

ORGAN, Troy Wilson. The Silence Of The Buddha. *Phil East West* 4,125-140 Jl 54.

According to the literature of Buddhism the Buddha recited fourteen metaphysical questions which he refused to answer, and which he advised his followers not to try to answer. This essay examines six reasons for the Buddha's silence: (1) He accepted the current views; (2) He rejected the current views; (3) He had no views of his own; (4) He would not tell his own views; (5) He could not tell his own views; (6) He would not be distracted from his main purpose.

ORGAN, Troy Wilson. The Status Of The Self In Aurobindo's Metaphysics—And Some Questions. *Phil East West* 12,135-152 Jl 62.

Since the examination of the self in Aurobindo must be in the context of his metaphysical system, this essay begins with a consideration of Brahman in Aurobindo's thought, moves to the universe as involution or manifestation of the Brahman, and then turns to man's unique role in the movement back to the Brahman. A few of the problems in Aurobindo's view of the self are noted at the close of the essay.

ORGAN, Troy. *Western Approaches To Eastern Philosophy.* Athens Ohio Univ Pr 1976.

This book is a collection of twenty-one essays which reveal the author's conviction that the decline of the West is a reality, and that the remedies from within the Western tradition have proved to be inadequate. In the various essays the belief is expressed that a dialogue between Eastern and Western traditions is the most promising way out of our malaise.

ORGAN, Troy. A Defense Of Religion In Liberal Arts Education. *Journal Of Bible And Religion* 31,233-239 Jl 63.

The study of religion in higher education can help in implementing the four freedoms of a liberal education: (1) Freedom from ignorance, i.e., from knowing too little; (2) Freedom from atrophy, i.e., from ceasing to grow; (3) Freedom from dogmatism, i.e., from knowing with false security; and (4) Freedom from intolerance, i.e., from closing the mind to other points of view.

ORGAN, Troy. Aristotle On The Educated Man. *Basic College Quarterly* 3,26-29 Wint 58.

This article is a consideration of Aristotle's characteristics of the "educated man" or "the man of wisdom" as found in his works.

ORGAN, Troy. Integration In Higher Education. *Journal Of Higher Education* 26,180-187 Ap 55.

Programs of higher education must help the student break down the barriers among the sciences and between knowledge and action. The ways of theoretical integration are the historical, the encyclopedic, the methodological, and the conceptual. The ways of practical integration are the psychological, the activist, the intellectual, and the valuational.

ORGAN, Troy. Philosophy As Integrator Of General Education. *Journal Of Higher Education* 21,476-478 D 50.

Integration is the unique function of philosophy in the liberal arts program of higher education. This integration ought to take the form of development of the techniques for forming a personal philosophy of life.

ORGAN, Troy. Pluralistic Christianity. *Review Of Religion* 9,361-365 My 45.

All efforts to arrive at a single Christianity fail because there are four irreducible sources of knowledge—or ways of validating knowledge—within religion. These are authority, reason, intuition, and experience. Tolerance among these four varieties of Christianity, rather than efforts to unite Christianity, should be the keynote of modern Christianity.

ORGAN, Troy. Reason And Experience In Mahayana Buddhism. *Journal Of Bible And Religion* 20,77-83 Ap 52.

Mahayana Buddhism can be divided philosophically by the two methods which the Buddhists have used to grasp ultimate reality: reason and experience. Yogacara and Madhyamika have tried to extend the Buddha's insights by appeal to reason. Zen contends that reality can be experienced but never named rationally.

ORGAN, Troy. The Fascination Of The Terrible. *Religion In Life* 10,372-379 Sum 41.

This article is a criticism of aesthetic naturalism and religious humanism as adequate philosophies of religion based on the contention that they neglect those aspects of human life which can be grouped under the "terrible," e.g., the ugly, the tragic, the grotesque, the hideous, and the evil.

ORGAN, Troy. The Images Of Aristotle. *Ohio University Review* 4,34-48 1962.

Three aspects of the general theme of the reputation of Aristotle in Western civilization are considered: (1) Aristotelianism as a philosophical approach distinct from Platonism, (2) five images of Aristotle in Western thought, and (3) an itemization of a few directions in which Aristotle has influenced Western thought.

ORGAN, Troy. The Language Of Mysticism. *Monist* 47,417-443 Spr 63.

The article begins with a criticism of Walter Stace's view of the language of mysticism. The contention of the author is that the mystic does not use language to announce metaphysical truths, as Stace thinks, but to motivate others to their own enlightenment through the efforts to communicate his own mystical experiences. The language of mysticism is emotional, uses negatives, uses paradoxes, appeals to ignorance, and attempts to reveal an integrated point of view.

ORGAN, Troy. The Philosophy Of India. *Ohio University Review* 1,59-72 1959.

The spirit of Indian philosophy is indicated in its chief characteristics, viz., multiformity, traditionality, dialectical movement, practicality, intuitive approach, subjectivity, and spirituality.

ORGAN, Troy. What Is An Individual? *Int Phil Quart* 5,666-676 D 65.

This is a report on the Fourth East-West Philosophers' Conference which was on the status of the individual. The author argues that no agreement was reached as to what an individual is, and hence the discussions were not fruitful. Eight views of what constitutes an individual are offered as a framework for future philosophical discussions on this topic.

ORMOND, Alexander T. *The Philosophy Of Religion: Lectures Written For The Elliott Lectureship At The Western Theological Seminary.* Princeton NJ Princeton Univ Pr 1922.

ORSINI, G N G. *Coleridge And German Idealism: A Study In The History Of Philosophy With Unpublished Materials From Coleridge's Manuscripts.* Carbondale S Illinois Univ Pr 1969.

Much of this work is devoted to the work of Kant. Fichte, Schelling and Hegel are also treated, but more briefly. According to Orsini, Coleridge's earlier writings contain nothing like Kant's critical methods or his theories of pure intuition. Although Coleridge did not totally borrow the Kantian doctrine of the schemata, he follows Kant closely except his assignment of the antinomies from Pure Reason to Understanding.

ORSINI, G N G. Theory And Practice In Croce's Aesthetics. *J Aes Art Crit* 13,300-313 Mr 55.

ORSINI, Gian N G. *Benedetto Croce, Philosopher Of Art And Literary Critic.* Carbondale S Illinois Univ Pr 1961.

The author states his aim as "not biographical or purely historical but critical. The goal has been to see whether there is a practical theory of literary criticism in Croce. Croce's critical writings, 'ranging over the whole territory of Western literature' and making up the larger part of the more than seventy volumes which Croce wrote, are examined along with his specific writings on aesthetic theory. The author points out that 'the essence of (Croce's) aesthetic is the autonomy of the poetic faculty.' He stresses Croce's conception of 'organic unity; Croce differs from some other upholders of organic unity in conceiving it as a function of the expressive act and not as a static quality of an external object, the artifact.' The poetic creation 'Croce defines as the expression of an emotion through an image, the image and the emotion both coming to be at the same time.' The accompanying theory of criticism rejects 'critical relativism' and insists on 'judgment by means of a category or universal concept.'

ORSINI, Gian Napoleone Giordano. *Organic Unity In Ancient And Later Poetics: The Philosophical Foundations Of Literary Criticism.* Carbondale S Illinois Univ Pr 1975. The author is primarily concerned with the notion of "organic unity," as this notion

appeared among the writings of the "ancients." He is principally concerned with the works of Plato, especially *Phaedrus*. He finds the works of Aristotle far less clear and original than those of Plato on this subject. In this study, it is claimed that one prime difference between the ancients and more recent authors is a shift from the objective to the subjective.

ORTH, Don and Thomas, Ivo. Axioms For The "Gergonne"—relations. *J Sym Log* 24,305 D 59.

ORTIZ, Pacifico and North, Arthur A. A Return To The Natural Law. *Thought* 30,525-536 D 55.

ORTMAN, E J. *Philosophy Of Teaching.* NY Philosophical Lib 1962.

In his Preface the author states that "the greatest need in education today is a comprehensive but unitary objective" and "I accepted the developing child, that is, the personality of the child to be the objective of all worthy educating. A democratic personality must be the objective of educating in the United States." After an examination of the concept of personality a teaching procedure is outlined and seven areas of education are discussed in the light of the idea of personality development. The final chapters consider the wider setting of education.

ORTON, William Aylott. *The Liberal Tradition: A Study Of The Social And Spiritual Conditions Of Freedom.* New Haven Yale Univ Press 1945.

OSBORN, Arthur W. *The Future Is Now: The Significance Of Precognition.* New Hyde Park NY University Books 1961.

OSBORN, Jane M. Austin's Non-conditional Ifs. *J Phil* 62,711-715 D 65.

This article discusses Austin's thesis that, in the two sentences 'I can if I choose' and 'I shall if I choose,' the 'if' clauses are not conditional clauses. It is argued that Austin has not proved his thesis, and that his conclusions rest largely on: (1) a too facile transition from *particular* uses to meaning; (2) dubious and misplaced appeals to grammar. In particular, it is suggested, there is positive evidence that the 'if'-clause in 'I can if I choose' is conditional: namely that, if we add 'but not unless' to this sentence we obtain another meaningful sentence, which has a *different* sense.

OSBORNE, Charles. *Kafka.* NY Barnes & Noble 1968.

OSBORNE, Harold. *Aesthetics And Art Theory.* NY Dutton 1970.

OSBORNE, Harold. *Theory Of Beauty; An Introduction To Aesthetics.* NY Philosophical Lib 1953.

OSBORNE, Harold. The Elucidation Of Aesthetic Experience. *J Aes Art Crit* 23,145-152 Fall 64.

OSBORNE, H. Reasons And Description In Criticism. *Monist* 50,204-212 Ap 66.

If one accepts Kant's phenomenological analysis of the aesthetic judgement as involving an implicit claim to universal validity, the reasons appropriate to be given in criticism cannot be of the nature of psychological generalizations. The differentiation of aesthetic reasons from judgments of personal liking and from social or moral norms is a necessary preliminary to understanding what one is about in criticism. The article discusses Wittgenstein's statement that reasons in aesthetics are of the nature of further descriptions and draw attention to a thing. Wittgenstein's doctrine of "directional discomfort" applies in negative criticism only and makes the mistake of putting the critic in the shoes of the artist. The more important part of the critic's task is to draw attention to the excellences that are there and by means of appropriate descriptions to enable others to apprehend what he himself has apprehended in appreciation.

OSGOOD, Charles E and Suci, George J and Tannenbaum, Perry H. *The Measurement Of Meaning.* Urbana 1957.

Two interrelated theories of meaning are defended in this volume. The first proposes that a term, S, means T to a human being, H, if some of the responses H had made to an object or property, T, are elicited from H by the term S. To account for the acquired powers of S to elicit responses, the authors argue that H had frequently co-experienced S and T. The second theory is based upon the following three assumptions: a) Suitable pairs of contrary terms may be considered ends of a meaning dimension; b) Sets of meaning dimensions can serve as axes of a meaning space or semantic space, upon which a distance function can be defined and in which an origin can be determined; c) by asking a subject, H, to associate a term S with those employed in defining a semantic space, L, psychologists can locate the place of S for H in L. To relate the first theory to the second, the authors reason that the direction of S in L will correspond to the reactions elicited by S; its distance from the origin, to the intensity of the elicited responses.

OSOWITZ, B M. Of Recent Origin. *J Phil* 55,1104-1109 D 58.

OSSOWSKA, Maria. *Social Determinants Of Moral Ideas.* Philadelphia Univ Of Penn Pr 1970.

In this series of lectures on descriptive ethics she surveys the factual relations of moral phenomena to other aspects of human life: geography, economics, politics, family life, art, law and religion. She also discusses the situation of normative ethics today but her views on the universality and relativity of moral values remain rather vague. A final chapter on the ethos of the nobleman and the bourgeois brings us back to something like Shaftesbury's *Characteristics*.

OSSOWSKA, Maria. Moral And Legal Norms. *J Phil* 57,251-257 Mr 60.

The author discusses Leon Petrazycki's account of the difference between legal and moral norms. According to Petrazycki, moral norms are norms which command without authorizing anybody to claim the deed commanded, while legal norms are not just unilaterally binding but give to others a right to claim the fulfillment of the norm. The author then outlines some difficulties encountered in Petrazycki's characterization of law and morality.

OSTERHOUDT, Robert G (ed). *The Philosophy Of Sport: A Collection Of Original Essays.* Springfield IL Thomas 1973.

The ontological status of sport is treated by Weiss, Schacht, Fraleigh, Stone, Suits, Kretchmar, Morgan, and Keenan. The ethical status of sport covers competition play in culture, the moral idea, experimentalism, anti-neutralism, the Kantian ethic, and player betting. Under the aesthetic status of sports, Kuntz compares sports and theatrical art, Keenan interprets the athletic contest as Aristotelian tragedy, and Osterhoudt applies Hegelian aesthetic categories to sport and athletics.

OSTERMANN, Robert. Gabriel Marcel: Existence And The Idea Of Being. *Mod Sch* 32,19-38 N 54.

OSTERMANN, Robert. Gabriel Marcel: The Discovery Of Being. *Mod Sch* 31,99-116 Ja 54.

OSTERMANN, Robert. Gabriel Marcel: The Recovery Of Being. *Mod Sch* 31,289-306 My 54.

OTIS, Jack and Barnett, George. *Corporate Society And Education, The Philosophy Of Elijah Jordan.* Ann Arbor 1961.

Jordan's work may best be described as a philosophy of culture. He has worked out an interesting organic theory of culture with strong affinities to Hegel, and yet which sharply diverges from the Hegelian point of view. Barnett and Otis attempt to present both the social theory and to apply it to educational theory. There is a discussion of Jordan's notion of objective virtues of culture (wisdom, temperance, courage, and justice). The second section of the work outlines the corporate theory of education. The cardinal notion is that the state must advance culture in all its forms. Education depends upon such an advance for the realization of its object.

OTTO, Herbert A. Motivation And Human Potentialities. *Humanitas* 3,293-306 Wint 68.

OTTO, Herbert Arthur (ed). *Explorations In Human Potentialities.* Springfield IL Thomas 1966.

OTTO, M. C. *The Human Enterprise: An Attempt To Relate Philosophy To Daily Life.* NY Crofts 1940.

James and Dewey, according to the author, revolutionized knowledge but left values a philosophers' monopoly. "Realistic Idealism," the philosophy here offered the plain man, seeks to complete the pragmatist revolution, to put values into "shirt sleeves."

OTTO, M. C. A Lesson From Jonathan Edwards. *Humanist* 1,37-40 Sum 41.

OTTO, M. C. On A Certain Blindness In William James. *Ethics* 53,184-191 Ap 43.

OTTO, M. C. Scientific Humanism. *Antioch Rev* 3,530-545 D 43.

OTTO, M. C. Victims Of Philosophic Finality. *J Phil* 38,627-634 N 41.

OTTO, Max C. *Science And The Moral Life.* NY 1949.

The thesis of the book appears to be that while science has made great physical power available to mankind, its utilization has been given direction by a badly outmoded morality and that only a reformation in the field of social value can save man from impending destruction.

OUIMETTE, Victor. *Reason Aflame; Unamuno And The Heroic Will.* New Haven Yale Univ Pr 1974.

The work examines the influence of nineteenth century concepts of heroism (Nietzsche, Tolstoy, William James, and Carlyle) on Miguel de Unamuno (1864-1936), Spain's quixotic writer-philosopher, and illustrates his theory that a hero's beliefs are so strong that they set "reason aflame." He utilized his characters to illustrate his philosophy, centered as it was on the person's heartfelt thirst for immortality despite his knowledge that it was rationally impossible. Thus, Unamuno's fictional works were so many ways of saying what he did in his outstanding essay on *The Tragic Sense of Life*.

OUTKA, Gene H. *Agape; An Ethical Analysis.* New Haven Yale Univ Pr 1972.

'Agape' is defined in this book as what a Christian exhibits when, because of his religion, he loves his neighbor as he loves himself and also loves God with all of his heart, soul, and might. The book's discussions, however, are confined to problems about neighbor love, not because they are deemed more important than problems about love of God, but because they are dealt with, in philosophical investigations conducted since 1930, in a way that the author finds likely to produce progress in the understanding of agape. Seven of the eight chapters cover treatments of neighbor love in theological literature, mainly Anglo-American, published in recent decades, except that Kierkegaard's seminal thinking on the religious dimension of ethics is brought in repeatedly because of its special relevance as an ever-visible backdrop for twentieth-century thinking about agape. Besides the Kierkegaard exception, there is a relaxation of the Anglo-American emphasis in that one of the seven expository and analytical chapters is devoted to Karl Barth's perspective on agape.

OUTKA, Gene Harold (ed) and Reeder, J P (ed). *Religion And Morality: A Collection Of Essays.* Garden City NY Anchor Pr 1973.

OVERHOLSER, James A. *A Contemporary Christian Philosophy Of Religion.* Chicago Regnery 1964.

Overholser proposes in this book to elaborate a new philosophy of history and religion, which the author believes is "distinct from any comparable discussion to be found in the copious literature now available." He believes that the traditional modes of communicating theological truth are now ineffective and mean practically nothing to modern sophisticated man. Overholser's book is to be the resource to find

again the Judaeo-Christian meaning for life and history. The author wishes "to present a scientific and logical description of the main outlines of a new philosophy of history, of which the pivotal events of the Judaeo-Christian classics, in causal community with the totality of historic occurrence, form the significant core"; or as he puts it elsewhere, "The heart of the work is an existential interpretation of the personal being of Jesus Christ as understood in reference to an actual and far-reaching complex of historic events." To achieve his objective, Overholser employs "an interpretational synthesis" of the thought of Martin Heidegger and Alfred North Whitehead.

OWEN, G. E. L. Plato And Parmenides On The Timeless Present. *Monist* 50,317-340 Jl 66.

Parmenides confuses the domains of 'statement' and 'thing' by translating logical into ontological tenselessness. Plato, following Parmenides, derives the split between timebound and timeless objects from the distinction between tensed and non-tensed statements, but in *Sophist* seems to recognize his mistake. Owen examines Fraenkel's views of Parmenides and his successors, in delineating further problems. Parmenides' grammatical plays suggest a view of language underlying some puzzles erected, and later dismantled, in Plato.

OWENS, J. Aristotle On Categories. *Rev Metaph* 14,73-90 S 60.

The author argues that the Aristotelian doctrine of categories was based upon the natures of things, and not, as has been contended, upon the use of words. Therefore, category definition or construction was not an arbitrary procedure. However, the natures of things exist both in reality and in cognition; accordingly, logical as well as metaphysical features are involved in Aristotle's presentation of the categories. The author suggests in explanation that the natures upon which the categories bear are common to both logic and metaphysics. He then analyzes three types of category mistake in terms of Aristotle's treatment.

OWENS, Joseph. *An Elementary Christian Metaphysics.* Milwaukee Bruce 1963.

The author of this textbook is well known for his publications on the Aristotelian and Thomistic philosophies of being. His present work is described in the *Foreword* as intended for an elementary course; actually, it has much to offer advanced scholars. The book is thoroughly documented and includes footnote discussions of the views of ancient, medieval, modern and contemporary thinkers. Distinctive of the book are: the emphasis on *esse* as the act of being, the author's readiness to explore the metaphysical implications of Christian beliefs, the extended treatment of problems usually reserved for psychology, epistemology and natural theology. Most of the speculative thought of Thomas Aquinas is presented, as viewed from the level of the metaphysician.

OWENS, Joseph. *An Interpretation Of Existence.* Milwaukee Bruce 1968.

OWENS, Joseph. *St Thomas And The Future Of Metaphysics.* Milwaukee Marquette Univ Pr 1957.

Though Hegel was appalled by the strange spectacle of an educated people without metaphysics, a suitable place for it in our general culture is still a matter of the future. Yet man's natural desire for knowledge extends to it preeminently. While Aquinas never had occasion to interrupt his theological work to present a full-blown metaphysics, he uses throughout his writings distinctive metaphysical principles. These principles locate all being of every kind on the "existence" side of the "essence-existence" couplet, thereby offering prospects for the development of a new and satisfactory metaphysics in the years ahead.

- PALTER, Robert M.** *Whitehead's Philosophy Of Science*. Chicago Univ Of Chicago Pr 1960.
- The author's aim is that "... of dispelling some of the apparent obscurities and

exposing some of the real achievements in at least one area of Whitehead's philosophic activity, namely, his contributions to the philosophy of science." The discussions are often technical. The topics considered include: Einstein's special theory of relativity, Minkowski's space-time geometry, and such Whiteheadian notions as the constants of externality, the method of extensive abstraction, the theory of objects, as well as Whitehead's own theory of relativity. This study shows that "(by) far the most important influence on Whitehead's philosophy of science... was Einstein's theory of relativity," though it does explore the influence of quantum theory on the philosophy of organism. Included are four appendices on primes and antiprimes, on some geometrical concepts related to the theory of extension, on vectors and tensors, and on a survey of the writings on Whitehead's theory of relativity.

PALTER, Robert M. The Ethics Of Extermination. *Ethics* 74,208–218 Ap 64.

Whether or not nuclear war can ever be waged morally is the subject of Stein's *Nuclear weapons: A Catholic Response*, John C Bennett's *Nuclear Weapons and the Conflict of Conscience*, and Paul Ramsey's *War and the Christian Conscience*. Bennett and Stein and his fellow authors conclude nuclear war must necessarily involve killing innocents and hence must be abandoned entirely. Ramsey believes the opposite—that we must be prepared to wage nuclear war sometimes and can do so in accordance with traditional values. The author, sympathizing with pacifism, criticizes all of these works for their a-critical acceptance of traditional and conventional categories of political thinking and supports the condemnation of all-out war.

PALTER, Robert. Copernicanism, Old And New. *Monist* 48,143–184 Ap 64.

Noting that alternate philosophical views may inspire or form part of the basis of alternate scientific theories of the same phenomenon, the author discusses six diverse approaches to the geostatic-heliostatic controversy, focussing in on the two pairs of conflicting theories, those of Ptolemy-Copernicus and Einstein-Fock. After concluding that the issue "Does the earth move?" remains open, that there is no universally acceptable answer to it, that "epistemological relativity" originates in "kinematic relativity", the author sketches out how we are to proceed theoretically from here.

PALTER, Robert. The Place Of Mathematics In Whitehead's Philosophy. *J Phil* 58,565–576 S 61.

Exploring Whitehead's view of mathematics and its place in his philosophy, the author distinguishes three mathematical disciplines—pure, applied, and cosmological. Pure mathematics takes as its subject matter eternal objects, produces necessary truths, and is validated by deduction. Applied mathematics deals with corporeal societies, yields empirical truths, and is validated by sense perception. Cosmological mathematics has as its subject matter actual occasions, yields metaphysical truths, and is validated by descriptive generalization. The author also considers the relations among these three mathematical disciplines.

PANGLE, Thomas. *Montesquieu's Philosophy Of Liberalism*. Chicago Univ Of Chicago Pr 1974.

This book analyzes and clarifies in detail and depth the background and foundation of ideas and concepts informing Montesquieu's legal and political philosophy. Emphasis is placed upon the clarification and explanation of his views on nature, civilization, human nature and its desires and needs in the normatively grounded social context of religion, commerce and the various classes and their abilities in the nation-state. Cultural comparisons and contrasts between the political philosophies of the Ancients and the Moderns illuminate Montesquieu's overall aim.

PANOFSKY, Erwin and Saxl, Fritz and Klibansky, Raymond. *Saturn And Melancholy, Studies In The History Of Natural Philosophy, Religion And Art*. NY Basic Books 1964.

In Part I the views of many thinkers, including Plato, Aristotle, Galen, the Church fathers, Arabian philosophers, and Kant are explicated to show that melancholy was defined in different ways. It was described as a pathological disease, as a type of natural disposition indicative of intellectual pre-eminence or genius, as a Grace from God for the sufferings of the Holy Martyrs, as original sin, and as a sign of virtue. Parts II and III reveal the relation of the Kronos-Saturn myth to the Humoreal doctrine of melancholy. Saturn is revealed as a demon of opposites, symbolizing both good and evil. The fourth and last part is concerned primarily with an analysis of Durer's use of the Saturn-Melancholy theme in his "Melencolia I."

PAP, Arthur. *An Introduction To The Philosophy Of Science.* NY Free Pr Of Glencoe 1962.

The work is a text "addressed to scientists and philosophers interested in the conceptual foundations and methodology of modern science." The book is divided into five parts. Part One is on meaning and verification. Part Two is on mathematics and logic. The longest section is Part Three, which consists of detailed analyses of inductive inference and various concepts of probability. Part Four deals with causality, counterfactuals and disposition concepts, the question "What is a law of nature," physical determinism, Heisenberg's uncertainty principle, and free will. Part Five, is on the logic of explanation.

PAP, Arthur. *Elements Of Analytic Philosophy.* NY Macmillan 1949.

PAP, Arthur. *Semantics And Necessary Truth; An Inquiry Into The Foundations Of Analytic Philosophy.* New Haven CT Yale Univ Pr 1958.

The author clears the way in Part I for his later discussions by considering the treatment of necessary truths in Leibniz, Kant, Locke and Hume. He then gives a summary of Part II. A series of questions are brought in, due to theses of recent analytic philosophers, C I Lewis, Carnap, and others. The complexity of the present situation is emphasized: what seemed a clear distinction between logical and empirical truths gets crossed by questions of common usage and ostensive definitions and linguistic conventions; sense statements seem independent of physical statement, and yet it is all one world.

PAP, Arthur. *The A Priori In Physical Theory.* NY King's Crown Pr 1946.

Mr Pap, under the guidance of Professor Ernest Nagel, has given us a clarification of the status of the *a priori* in physical theory, via an examination of C I Lewis, John Dewey, and R Carnap, as well as of Hume, Kant, Mach, Duhem and Poincare. There is also here exhibited a clear understanding of the basic concepts of physics. Such problems as: the logical status of Newton's law of motion, the nature of physical geometry, the nature of causality in physics, the energy conservation law, and the concept of simultaneity in relativity, are carefully examined by Mr Pap in the light of his general thesis.

PAP, Arthur. Rejoinder To Mrs Robbins's "Some Remarks On Semantic Systems". *Phil Stud* 4,63-64 1953.

PAP, Arthur. Reply To Dewey's "Ethical Subject-Matter And Language". *J Phil* 43,412-414 Jl 46.

PAP, Arthur. Reply To Grover Maxwell's "Arthur Pap On Meaning Rules". *Phil Stud* 11,38-40 1960.

The author argues that a sentence cannot in one and the same context be used to express a linguistic rule and an analytic proposition. He allows that the fact that a sentence expresses an analytic proposition depends on linguistic rules, but contends that to say that the analyticity of the proposition "results" from the linguistic rule would be to commit a "category mistake."

PAP, Arthur. Semantic Examination Of Realism. *J Phil* 44,561-574 O 47.

PAP, Arthur. Strict Implication, Entailment, And Modal Iteration. *Phil Rev* 64,604-613 O 55.

PARK, Joe. *Bertrand Russell On Education.* Columbus Ohio State Univ Pr 1963.

This book includes, first of all, a discussion of Russell's logical analysis, his view of the world, and his ethics. Second, the sources of Russell's theory of education is briefly discussed including his debt to Locke, Rousseau, Thomas Arnold, behaviorism, psychoanalysis, Montessori, and Margaret McMillan. Third, Russell's views toward the institutions of church and state are examined. Russell's outlook on the desirable qualities of man are discussed, fourth: including vitality, courage, sensitiveness, intelligence, followed by an account of the ideal development of education for children from six to fourteen to the university. Fifth is an account of the Beacon Hill School established by Russell and his second wife, Dora. Park's appraisal constitutes the remainder of the book.

PARKER, De Witt. Basic Categories And Attitudes Of The Value Situation. *Rev Metaph* 13,555-596 Je 60.

This previously unpublished paper was the first chapter of an unfinished manuscript left by Parker in 1949; most of the remaining chapters appeared posthumously under the title, *The Philosophy of Value* (Ann Arbor, Michigan, 1957). The author's primary purpose here is to show that values are an essential factor of reality. He first discusses the personal "centricity," precariousness, privacy, and sociability of experience, and its conservation through memory, self-identity, and the universal. He then examines activity and passivity, fulfillment and frustration, and cooperation and opposition. Finally, after pointing up the ways in which values are intertwined with time and space, he discusses freedom, determinism, and moral responsibility.

PARKER, Dewitt H. *Experience And Substance: An Essay In Metaphysics.* Ann Arbor 1941.

The point of view taken in this metaphysical essay is finitistic, idealistic and monadistic. The method consists in the activity of combining elements given in experience into new conceptual pictures, which are then applied to types of existence not given in experience but acknowledged in some sense. Epistemological issues are generally subordinated to ontological discussions, and frequent reference is made to current writings in the philosophy of logic and mathematics.

PARKER, DeWitt H. *The Philosophy Of Value.* Ann Arbor 1957.

In his preface the editor, W K Frankena, explains that this volume is based on an incomplete manuscript which the author left behind when he died in 1949. The work, however, seemed "sufficiently well-rounded to make a book." Intrinsic value is here conceived as the satisfaction of desire; "good" and "better" are meaningful only in relation to life plans. Value statements are volitional, not true of false. Standards are objectives of desires, but of desires of a higher order, namely, desires concerning desire. Chief among the "rival theories" discussed are those of R B Perry, C I Lewis, John Dewey and A C Ewing. There also is a chapter on the limits of relativity.

- There are three types of beliefs. A first-order belief is a record of immediate experience, a second-order belief is one which follows from other beliefs by logical rules, and a third-order belief is a presupposition of second-order beliefs and is neither proven nor a record of experience. Since, to be rational, a belief must be either proven or a record of experience, only the first two types of beliefs are rational. Articles of faith are like third-order beliefs in that they are neither records of experience nor proven and yet are necessary presuppositions for second order beliefs. Hence articles of faith are not rational beliefs in the defined sense.
- PARKER, Francis H.** A Demonstration Of Epistemological Realism. *Int Phil Quart* 2,367-393 S 62.
- PARKER, Francis H.** Classical Realism And The Integration Of Knowledge. *Rev Metaph* 14,543-564 Mr 61.
- PARKER, Francis H.** Head, Heart, And God. *Rev Metaph* 14,328-352 D 60.

- PARKER, Francis H.** The Temporal Being Of Western Man. *Rev Metaph* 18,629-646 Je 65.
- The author's stated purpose is to stimulate reflection on the temporal being of Western man as expressed in his philosophy. To that end, he proposes an interpretive key to the structure and meaning of the history of Western philosophy, taken as a whole and as history. His heuristic thesis is that the development of the species recapitulates or reflects the development of the individual. The author discerns three stages in the child's maturation and applies this insight to the development of philosophy in the ancient, classical, medieval, and modern periods.
- PARKER, Francis H.** Traditional Reason And Modern Reason. *Phil Today* 7,235-244 Wint 63.
- PARKER, Franklin.** The 4th R. *J Thought* 2,42-44 Ja 67.
- PARKES, Henry Bamford.** *Gods And Men: The Origins Of Western Culture*. NY Knopf 1959.
- The author proposes "to analyze the development of... dominant ideas and beliefs which have given the Western world its creativity and sense of collective purpose." His underlying convictions are "that the main factors in the political and economic development of any society are its general view of life and system of values, that these are reflected in its philosophy, literature and art, [which are therefore] prime materials for... understanding... the past, that the vitality of any society depends upon the continued affirmation of mythical symbolisms created by the collective imagination for the ordering of experience, and that a pure rationalism can result in social disintegration." The author has no "particular theory of historical development to propound. All attempts to impose some rigid and comprehensive pattern of historical interpretation—whether those of Spengler and Toynbee or of the economic determinists—seem to lead to demonstrably erroneous conclusions. The balance of the book is gathered under four headings; Primitive and Near East Background; Judaism; Hellenism; Christianity.

- PARRY, William Tuthill.** Quantification Of The Predicate And Many-Sorted Logic. *Phil Phenomenol Res* 26,342-360 Mr 66.
- Using many-sorted logic with identity (MSI) in Smiley's way, we write " $\Pi a \Sigma b (a = b)$ " for "Every a is (identical with) some b "; " $\Pi a \Pi b (a \text{ does not equal } b)$ " for "Every a is distinct from every b ," i.e., "No a is a b "; similarly for I and O forms. This analysis throws light on scholastic logic. Any term distributed in a standard categorical form now has a universal quantifier. There are four non-traditional forms; e.g., " $\Pi a \Pi b (a = b)$," "Every a is (identical with) every b ," which we label α . Aristotle and his commentators held α is always false. But Ockham saw that α is true just in case the one and only a is the only b . De Morgan's exemplar system corresponds to the eight MSI forms, but he misinterprets two forms. We give rules for immediate inferences. Burleigh and Gersonides, taking α collectively, founded a Hamiltonian tradition of quantification of the predicate.

- PARSONS, Howard L (ed)** and Somerville, John (ed). *Dialogues On The Philosophy Of Marxism*. Westport CT Greenwood Pr 1974.
- This work is composed of papers written for the symposia of the Society for the Philosophical Study of Dialectical Materialism, beginning in 1962. The contributors come from the U. S. A., the U. S. S. R., Poland, Yugoslavia, and Belgium. Their contributions are organized under the following topics: philosophic foundations of Marxism; Marxism and theory of logic; Marxism and the philosophy of science; Marxism and humanism; Marxism's image of man; Marxism and ethical theory; Marxism and alienation; Sartre and Marxism; and dialogue and history.
- PARSONS, Howard L.** *Humanism And Marx's Thought*. Springfield IL Thomas 1971.
- Humanism as an attitude and practice is expounded by an examination of the human roots of morality, the fulfillment of man, the dialectics of man's social relations, and the character of mental health. Marx's humanism is then defined through an exposition of his theory of value and his humanism, particularly in contrast to Sartre's existentialism. Finally, the principles of Marxist humanism are applied to concrete social issues—socialism and democracy, technology, racism and war in the United States, the new left, and the young generation.
- PARSONS, Howard L.** "Atheism And Man" in *Religion In Contemporary Thought*, George F McLean (ed), 149-186. Staten Island NY Alba House 1973.
- "Atheism" has both a negative meaning (not using the term "God," holding a deviant theological concept, etc.) and a positive meaning (having positive alternatives to traditional religious views on the significance of human living, criticizing existing religious practice, etc.). The atheistic critique of religion has been a necessary and important part of the dialectic between the two. Religion originates in man's search for supreme significance, and atheism in the economic conflicts of ancient slave societies. Modern atheism is the child of both empirical and rational criticism, as illustrated in Marx and other forms of atheism's critique of religion and theism.
- PARSONS, Howard L.** "Existentialism And Marxism In Dialogue" in *Marxism And Alienation*, Herbert Aptheker (ed), 90-124. NY Humanities Pr 1965.
- Sartre's attempt to develop a theory of individual freedom and praxis within Marxism through his existential method does not succeed. He carries into the attempt a dualism between consciousness and body, between self and others, and between freedom and determinism. But Sartre's study challenges us to overcome these dualisms and develop a more determined view of freedom.
- PARSONS, Howard L.** "Minding As A Material Force" in *Radical Currents In Contemporary Philosophy*, D DeGrood, D Riepe & J Somerville (eds), 90-114. St Louis Green 1971.
- Minding is a sensitive, responsive, valuational, purposive, innovative, and connective bodily activity, a psychosomatic unity sensing and responding to other bodies and communicating and cooperating with other human bodies. Man's minding body evolved as bio-social-ecological in a system; minding is integral to its continuance. The origins and anticipations of human minding lie in organic and inorganic matter with its sensitivity and responsiveness. The valuational drive of minding aims at the satisfaction of interest and the securing of satisfaction in an objective world; this requires innovation. Problems of economy and ecology call for the application of socialized minding to achieve mankind's survival and fulfillment.
- PARSONS, Howard L.** "Religious Naturalism And The Philosophy Of Charles Hartshorne" in *Process And Divinity*, W Reese And E Freeman (eds), 533-560. La Salle IL Open Court 1964.
- Naturalism means: reality is natural events and things objectively existing in space-time, with qualities and relations; nature is pluralized, continuous, knowable; experience, analyzed and synthesized, is the reliable way to knowledge, which is public and probable; value inheres in nature. Hartshorne's philosophy exemplifies these principles except, for example, where he holds to necessary propositions logically prior to experience. The most radical feature of his philosophy is the theory of reality as social process. It means the interdependence, reality, and value of non-human beings. God is conceived "by analogy with our virtues"; but disanalogy is needful too. And God as the superlative case of experience, all remembering, leads to questions.
- PARSONS, Howard L.** "Socialism's Meaning For American Democracy Today" in *Marxism And Democracy*, Herbert Aptheker (ed), 27-58. NY Humanities Pr 1965.
- The concrete problems of American society indicate the need for a social solution, namely, the collective and mutual determination of the people, or democracy. The fulfillment of generic human needs, the wastage of human abilities, the widespread lack of a significant, satisfying purpose, the inefficiency of the economic system, the corruption and dehumanization of man, and the principle of war—all point toward the need for a socialist, democratic solution.
- PARSONS, Howard L.** "Some Human Roots Of Inhuman War" in *The Critique Of War: Contemporary Philosophical Explorations*, Robert Ginsberg (ed), 56-76. Chicago Regnery 1969.
- War is the use of physical weapons to express a conflict of values. Its causes lie in

biological, psychological, cultural, social, economic, and ecological factors. Emphasis is put upon the shaping of specific individual motives by the system of social relations into which an economy casts men. These factors are discussed in detail, with data drawn from past and present United States society.

PARSONS, Howard L. "The Influence Of Lenin's Thought On U S Philosophers" in *Lenin's Impact On The United States*, D Mason, J Smith, & D Laibman (eds), 181–201. NY NWR 1970.

The positive and negative influences of Lenin's thought, primarily on United States philosophers in universities and secondarily on others, is traced chronologically through five periods from 1917 to 1970, with particular reference to schools of thought and work of individual scholars, especially John Dewey, Sidney Hook, Theodore B H Brameld, John Somerville, Howard Selsam, Roy Wood Sellars, Harry K Wells, Barrows Dunham, Herbert Aptheker, Robert S Cohen, and Donald C Hodges. A bibliography of ninety-six items is included.

PARSONS, Howard L. "The Marxist-Christian Dialogue" in *Towards A New Marxism*, Bart Grahl And Paul Piccone (eds), 217–233. St Louis Telos Pr 1973.

Peaceful coexistence is pursued by Marxists as a means to prevent the destruction of socialist states by war, and since World War II events have stimulated its development and dialogue—the growth of destructive weapons, the establishment of socialist states, the rise of national liberation movements, the presence of Christians in the new communist nations, the post-Stalin democratization in Eastern Europe, the Vatican initiative, and the radicalization in Western Europe and North and South America. Christianity and Marxism share a common humanistic origin, having a dream of a community of equals. Dialogue is both a means and an end to a more humanized world.

PARSONS, Howard L. "The New Reformation" in *The Empirical Theology Of Henry Nelson Wieman*, Robert Bretall (ed), 116–134. NY Macmillan 1963.

The aim is to expound critically some of the main ideas of Wieman as related to the Protestant Reformation and to formulate some questions about his system. Is God as a creative natural event non-temporal? Does man want the flow of felt quality or the transformation that sometimes leads to poverty and death? Should we not emphasize the actual conditions under which qualitative transformation occurs? Does not man determine in part the character and course of creativity? Must not man commit himself in social action to the structures on which it depends? What is the element of permanence in God?

PARSONS, Howard L. A Definition Of Freedom. *Main Currents* 10,57–60 Ja 54.

PARSONS, Howard L. A Reformulation Of The Philosophical Presuppositions Of Religion. *Journal Of Religion* 42,119–132 Ap 62.

In his experience the philosopher begins with pre-analytical commitments (presumptions, deep-seated ideas). He is committed to articulate these in their full meaning, proceeding through doubt and passing on to inquiry. Thus a regenerate naturalism interprets anew the presupposition of God. First, God as object eliminates God as a supernatural, unknowable being, a totality of all things, a subject only, and a self-evident being; to be objective is to stand over against other events; objects are known as objectified in subjects; and God is objectified in us as continuous with our creativity. Second, God as subjective is the giving of grace. Third, God is continuous with man—as required by the nature of knowledge. Fourth, God is discontinuous with man because a creativity other than ours breaks through our own.

PARSONS, Howard L. Are There Any Norms For Laws? *Ethics* 73,284–286 Jl 63.

PARSONS, Howard L. Buddha And Buddhism: A New Appraisal. *Phil East West* 1,8–37 O 51.

For Gautama Buddha the problem of human life is the painful compulsion and suffering of habit produced by coercive desire. His solution is the middle path between detachment and attachment, asceticism and indulgence, a detached mind integral to action and strife. But ambiguities arise: shall we respond to conflicts by the integration of action or inaction? Is ultimate meaning in nature's interactions or the enlightenment of the human mind? Is the good life scarcity or abundance? Buddhists, tending to take the last alternatives, are mistaken. Creative transformation of man is the middle way between the active perfectionism of the West and the intellectual perfectionism of the East.

PARSONS, Howard L. Democracy And Government: A Radical, Social View. *Phil Forum (Pacific)* 2,72–83 D 63.

Men are essentially social and cooperative; their basic value is the liberating power of creative interaction. They can change themselves by changing others and the world through collective action. Government is the rule of, by, and for the people, a means of securing their fulfillment. Freedom is not the absence of coercion. It is the power to choose alternatives, self-determination in the midst of determinations, and the progressive discovery of conditions necessary to man's creative development. Democracy is the progressive, mutual determination of persons concerning their common problems. Government is not over people; it is people.

PARSONS, Howard L. Dewey's Religious Thought: The Challenge Of Evolution. *J Phil* 58,113–120 Mr 61.

This paper analyzes and criticizes Dewey's religious thought. For Dewey, God is the active relation between ideal and actual; the divine is the natural and the creative. But Dewey leaves his view of God ambiguous and undefined. The question, the author argues, is whether there are creative factors in the human situation which man does not entirely make, know, foresee, or control.

PARSONS, Howard L. Existential Hell. *Journal Of Religious Thought* 21,25–42 1964–65.

A study of Sartre's *No Exit* shows that hell is the entrapment of persons in mutual parataxic distortion and frustration, from which there is no escape either in life or death. It is the pathetic exploitation of dependence, dominance, and detachment in human relations. It is isolation, impotence, and the despondent sense of no salvation. It is mutual oppression without relief. Yet Sartre presupposes a doctrine of

community as a norm. Hell can thus be understood as the result of the refusal to undergo the transformation of self in a trusting, creative, mutually supportive relation with others. To understand the hellish torment of alienation, we must understand that in some sense the heaven of human community has already arrived.

PARSONS, Howard L. God And Man's Achievement Of Identity: Religion In The Thought Of Alfred North Whitehead. *Educ Theor* 11,228–254 O 61.

Whitehead's basic perspectives—panpsychism, societism, process philosophy, subjectivism, atomism, and empiricism—are expounded first; then, the creative process of concrescence, God, religion, and the ways in which Whitehead's religious philosophy departs from traditional religious concepts. The implications of this philosophy for educational methods and aims are then drawn. For example, the perspective of panpsychism means that education must aim at the intensification of feeling through the harmony of vivid contrasts, that the deadening effect of routine, dogmas, inert ideas, and outworn philosophies must be avoided, that pure "objectivity" is a fiction, and that the life of learning is "romance."

PARSONS, Howard L. History As Viewed By Marx And Whitehead. *Christian Scholar* 50,273–289 Fall 67.

Marx and Whitehead differed on idealism and materialism, the nature of historical conflict, and the method of historical change. But their positions interpenetrate and unite at many points. Whitehead was an activist and appreciated the force of economics and revolution; Marx was a scholar and appreciative of reason. Both recognized the role of both thought and practice in history. Both understood man's interdependence with the ecological environment, though Marx elevated man more than Whitehead, who was speculative and cosmological. Both began with "an interlocked community" in history. For Marx nature is advanced in man; for Whitehead, man is advanced in the whole of nature.

PARSONS, Howard L. Reality, Value, And Growth. *J Phil* 50,513–527 Ag 53.

Man's nature or reality is the way of his fulfillment of needs, creative adjustment—progressive transformation through realistic and integral interaction with real things and events. Man's nature (and value) is his unitary, creative growth. Growth is an arbitrary ontological ground for human prizes. The sanction for growth as ultimate value is the consensus of the healthy, competent people who choose it over death, and the day-to-day priority given it by the broad masses of the people.

PARSONS, Howard L. Reason And Affect: Some Of Their Relations And Functions. *J Phil* 55,221–229 Mr 58.

The pervasive affective background of human conduct is mobilized by value stimuli, correlated with organismic energizing, and ordered by perceptual, autonomic, cortical, and other action. Reason, an abstractive, selective activity producing and combining signs and organizing conduct, orders the emotional responses of the organism in itself and in relations to others and the physical environment. Generic "quality" includes "feeling" (vague and diffuse), "sensation" (sharply localized), and "emotion" (guided by cerebral activity). It is the function of vital drives and contexts of events. Reason is an instrument of problem-solving and, more generally, of healthy human fulfillment. Its origin, substance, and ultimate sanction is the life of felt quality.

PARSONS, Howard L. Reason, Affect, And Value. *Educ Theor* 9,65–75 Ap 59.

PARSONS, Howard L. Rooted And Grounded In Love. *Pastoral Psychology* 2,34–41 F 51.

In contrast with the supernaturalistic and pessimistic views, scientific naturalism affirms the innate goodness of man—man's possibilities for creative growth, integration, love, cooperation, and progress. Studies in the biological and social sciences support naturalism. For naturalism the disorders or evils of mind, body, and society are normal responses to abnormal environments. The natural law of our interdependence requires a common effort to change our relations to others in all social institutions.

PARSONS, Howard L. The Ground Of Moral And Spiritual Values. *Teachers College Record* 55,24–36 O 53.

The ground and generic value of our democratic heritage and common life is creativity: the expanding of fellow feeling, the emerging of the feeling of a need, the objectifying of felt need through clarified awareness and cooperation, and the personal and social integrating of awareness. Only such an established, public, universal ground for values, and not some private religious perspective, can become the correct guide for values in our democratic and educational life.

PARSONS, Howard L. The Meaning And Significance Of Dewey's Religious Thought. *Journal Of Religion* 40,170–190 Jl 60.

For Dewey the religious attitude aims at wholeness of attitude and adjustment, continuous with nature, evocative of dependence and trust and a sense of community and communion with all that supports human activities and values. The problems here are: Is the whole pre-established or an ideal? Is the religious attitude dependence or the idealized goals of imagination? Is God actual or ideal? We need an experimental study of religion and more knowledge of what Dewey called the "enveloping whole."

PARSONS, Howard L. The Prophetic Mission Of Karl Marx. *Journal Of Religion* 44,52–72 Ja 64.

Expounded are Marx's concept of alienation, his views on religion as alienation, the concept of idolatry as it functions in Marx's thought, Marx as a prophet, and an estimate of Marx as a prophet, i.e., whether a materialist can be religious, the meaning of atheism, the transformation of religion in the good society, and what is of final significance for man. For Marx, man must and will trust a creative process operating in and between men and between men and the rest of nature. This process has also been the object of devotion in religious traditions such as the Judaic-Christian one.

- PARSONS, Howard L.** The Social Implications Of Science (Part II). *Main Currents* 8,84-88 S 51.
- PARSONS, Howard L.** The Social Implications Of Science (Part II). *Main Currents* 8,52-56 Je 51.
- PARSONS, Howard L.** The Social Responsibility Of The Philosopher As Philosopher. *Ethics* 72,277-282 Jl 62.
- While different, philosophers engage in the analysis, criticism, and synthesis of significations and beliefs about the reality of the world, its values, how to know the world and act toward it, and the order among these beliefs. Subject to social influences, the philosopher deals with recurrent human questions. In dialogue and the search for corroboration, he is social in method and aim. He is responsive in the four modes of signification and to the demands of philosophical system-making. "Responsibility" is a prescriptive extension of responsiveness; it means both "can" and "ought." The philosopher is responsible as he fulfills the evaluative, reflective tendencies of his natural activity and thus articulates what is deeply human.
- PARSONS, Howard L.** Value And Mental Health In The Thought Of Marx. *Phil Phenomenol Res* 24,355-365 Mr 64.
- For Marx value is the practical, critical, productive interaction of man as individual and group with other men and nature, creating persons, society, and use-values, and transforming nature. The psychosomatic self is created through this process of fulfilling vital and higher needs; through productive labor, the self's relations to others and to natural objects are created. Mental health is the progressive fulfillment of man's practical-critical capacities in productive activity. Under capitalism man experiences ill health and alienation. This disordering of man's development of his species-life can be corrected by the workers' transformation of the system of private property into a socialist order.

- PASCH, Alan**. *Experience And The Analytic: A Reconsideration Of Empiricism*. Chicago Univ Of Chicago Pr 1958.
- We say, "Back to experience," but Dr Pasch adds that the philosophers of empiricism seem to be moving away from experience. His discussion falls under three main heads. First a review of American controversy over the analytic-synthetic distinction. The empirical falls under synthetic, and the ideal language under analytic. But the sharp line turns out itself to be more or less a convention, the ideal language a vacuous tautology. Secondly, the author considers whether there are unmistakable ultimate data of empirical experience, sense-data for instance, not intuitions. He finds always the reachable data are not ultimate. Thirdly, he finds empiricism seeking an intersubjective experience which is under active pragmatic reconstruction, and with a value aspect to it. This empirical reconstruction is at once testable, and as precise as can be significant. The book is primarily a survey with many references of views about empiricism, a critical contribution to American analytic philosophy.

- PASCH, Alan**. Science, Perception, And Some Dubious Epistemological Motives. *Phil Stud* 8,55-61 1957.
- This article goes into five arguments which attempt to deny the philosophical significance of scientific evidence and theories about perceptions. The arguments taken up center on the nature of induction and observation, the distinction between *how* and *what* we perceive, and a distinction between an investigation of the world and an analysis of concepts. The author concludes that epistemology is, itself, not untainted by induction or observational grounds, that many epistemologists have been concerned both with what we perceive and how we perceive it, and that the epistemologist, if he is to grant scientific theories any sort of significance, must grant them epistemological significance.

- PATERSON, Antoinette Mann**. *Francis Bacon And Socialized Science*. Springfield IL Thomas 1973.
- PATERSON, Antoinette Mann**. *The Infinite Worlds Of Giordano Bruno*. Springfield IL Thomas 1970.
- Dividing Giordano Bruno's thought into three obvious categories, this study treats his cosmology, theory of knowledge and ethics in consecutive chapters. Throughout the author emphasizes the novelty and influences of Bruno's views on the infinity of the cosmos, the importance of a universal and dynamic matter, and the need for critical re-examination of all that is accepted on the basis of faith and custom. The author uses a technique of extensive quotation from primary and secondary sources.
- PATERSON, R W K.** *The Nihilistic Egoist: Max Stirner*. NY Oxford Univ Pr 1971.
- The 19th century nihilist Max Stirner (1806-1856), mainly remembered for his influence on Marxism, anarchism, pessimism and existentialism, is here presented as a philosopher of intrinsic significance. He maintained egoistic nihilism in its most extreme form, even living the logical conclusions his work entailed by sinking into utter indifference and inactivity after the completion of his only book, *Der Einzige und sein Eigentum*. Paterson pieces together the few known facts of Stirner's extraordinary life, and analyzes the work's affirmation of nothingness as paradoxical undertaking. The repercussions of the book on early Marxism are discussed in detail, and the surprising anticipation of many of the darker existentialist themes are brought into focus. The book ends with a chapter on "philosophy as play."

- A philosophy of man in the existentialist tradition.
- PATKA, Frederick**. *Existential Thinkers And Thought*. NY Philosophical Lib 1962.
- There are two parts to this book. In the first Patka deals with five existential themes: the gap between abstract reasoning and life, being versus life as concrete duration, man in the world, man and fellow-man, man and God. He approves of existentialism as a protest against the excesses of positivism and materialism but thinks that, in turn, the existentialists have gone too far by discrediting man's intellect. The second part of the book consists of shorter essays, chiefly expository, on five existentialist thinkers.
- PATKA, Frederick**. *Value And Existence, Studies In Philosophic Anthropology*. NY Philosophical Lib 1964.
- The author says that theories of the relativity and subjectivity of values have disintegrated the systematic hierarchy of human values while materialism, positivism, naturalism, and pragmatism have destroyed their meaning. He recommends recovery of a unified system of human values which he tries to ground in a philosophic anthropology based on phenomenology, existentialism and 'traditional values'.

- PATTERSON, Charles H.** The Religious Philosophy Of Paul Tillich. *Iliff Review* 20,21-31 Wint 63.
- The purpose of this article is to present a simplified account of some of the more significant ideas included in Paul Tillich's conception of religion. His denial of the existence of God and his affirmation of the reality of God is explained by the fact the existence, as he understands it, means being in both space and time and he does not believe that God, whom he designates as Being-Itself, is either spatial or temporal. The doctrine of creation means for man the transition from the realm of essence to the

realm of existence. Many of the so-called myths of the Bible are regarded as symbols of significant truths relative to an understanding of human existence.

PATTERSON, R L. *The Philosophy Of C D Broad.* NY Unknown 1959.

PATTERSON, Robert Leet. *Irrationalism And Rationalism In Religion.* Durham NC Duke Univ Pr 1954.

A critical examination of three world-views which notes the consequences following from the adoption of each, and evaluates their significance for the philosophy of religion. The author rejects both irrationalism, currently represented in his view by naturalism, logical positivism, and neo-supernaturalism; and arationalism-plus-rationalism, including the Platonic tradition, the Nyaya Vaisesika school of Hindu philosophy, and the concept of a finite God. Finally rationalism is examined, and the necessitarian view, in which the structure of the universe is held to involve relations of logical entailment, is defended.

PATTERSON, Robert Leet. *Philosophy Of Religion.* NY Holt 1958.

This introductory text-book covers the usual range of topics: what philosophy and religion are, the relation of faith and reason, the arguments for the existence of God, the problems of evil and of human freedom, immortality. Illustrative material is widely drawn from Islamic and Indian sources as well as from Judaism and Christianity. In explicit opposition to old and new "faith-philosophies" the temper and method are those of Lockian rationalism. Thus religion is (normatively) defined as "the effort to view the ultimately real as rational, together with the emotional and volitional responses which such an outlook generates." Religion and philosophy merge. The content of philosophic religion is provided by a pluralistic idealism based upon the objectivity of universals and the substantiality and imperishability of the self. Both traditional theism and contemporary naturalism are rejected as forms of "dogmatic irrationalism... utterly incapable of meeting the demands of the intellect."

PATTERSON, Robert Leet. *Plato On Immortality.* University Park Penn State Univ Pr 1965.

This book offers an analysis of the four arguments in the *Phaedo*, the dialogue in which Plato is claimed to have sought to give conclusive proofs in favor of immortality. After discussing the historicity and the purpose of the dialogue, the author proceeds with a step-by-step analysis of the arguments. He concludes that only the third and fourth are alone capable to yield "absolute demonstration." The interpretation of the platonic Forms ascribed to in this book is one of realism. The contention is made that "Plato's effort throughout the *Phaedo* is to show that the immortality of the soul is somehow involved in its relation to the Forms."

PATTON, Thomas E. Some Comments On "About". *J Phil* 62,311-324 Je 65.

The workings of Nelson Goodman's criterion of absolute aboutness, in all but the simplest cases, are obscure. Goodman employs technical notions of designation and universal generalization, in particular, that are largely undefined. An interpretation of Goodman's criterion must clarify these notions and some others, guided by what seems most fundamental to his analysis. "Some Comments on 'About'" attempts to do this.

PATTY, Austin. Existential Teaching. *Educ Theor* 17,329-334 O 67.

PAUL, Anthony M (ed) and Olson, Raymond (ed). *Contemporary Philosophy In Scandinavia.* Baltimore Johns Hopkins Pr 1972.

This collection of philosophical papers by writers from Denmark, Finland, Norway and Sweden constitutes a thorough introduction to recent thought in contemporary philosophy. The contributions are printed under three heads: I) Logic, Philosophy of Language, Epistemology, and Philosophy of Science; II) Ethics, Political and Legal Philosophy; III) Philosophy of History and Interpretive Studies.

PAUL, L. *The Meaning Of Human Existence.* Philadelphia Lippincott 1950.

We are furnished with an examination of contemporary sceptical and materialistic thought in the light of Christian revelation in an endeavor to answer the question given as the title to the volume. Paul scores the humanistic and pantheistic ideas fostered since the Renaissance and he claims it is "Goethe and Rousseau and Hegel

and Spencer who are really on trial today." Much of contemporary scientific and philosophic speculation passes in review and is translated in the concluding section into Christian theological terms.

PAYNE, F Anne. *King Alfred And Boethius: An Analysis Of The Old English Version Of The Consolation Of Philosophy.* Madison 1968.

PAYNE, Harry C. *The Philosophes And The People.* New Haven Yale Univ Pr 1976. Most eighteenth-century French philosophes belonged to the class of power and wealth. They took a remote elitist view of the masses of men, but Payne shows that they did not remain static. The philosophers perceived themselves as educators of mankind and tutors of those holding economic and legislative power. Payne depicts Rousseau as an outsider, as one who feels close to the people but is misunderstood by them, and who argues with the enlightened without gaining a real hearing and respect. Rousseau represents the point of transition from a utilitarian-institutional view of social change to one guided primarily by moral social vision, by the demands of virtue as a closer form of responsibility.

PEARL, Leon. *Four Philosophical Problems: God, Freedom, Mind And Perception.* NY Harper & Row 1963.

PEARS, David F. *Ludwig Wittgenstein.* NY Viking Pr 1970.

The author presents an exposition and analysis of the evolution of the thought of Wittgenstein. The earlier and later views of Wittgenstein are contrasted through an analysis of the *Tractatus* and *Philosophical Investigations*. The *Tractatus* is seen in terms of Wittgenstein's objective of plotting the limits of language and of showing how this task deals with philosophical problems. The *Investigations* are viewed by the author as an extension and modification of the task begun in the *Tractatus*. The book also contains a short bibliography and a biographical sketch of Wittgenstein.

PEARS, David Francis (ed). *Bertrand Russell: A Collection Of Critical Essays.* Garden City NY Anchor Books 1972.

PEARS, David Francis (ed). *Freedom And The Will.* NY Macmillan 1963.

PEARS, David Francis. *What Is Knowledge?* NY Harper & Row 1971.

PEARSON, Clive Ingram. Ideas And Images. *Rev Metaph* 14,452-462 Mr 61.

The author argues that the received distinction between ideas and images as different classes of mental entity is radically mistaken; images are more properly to be classed with objects than with ideas. Failure so to class images has obscured the true and essential status of ideas, which the author defines as intentional or non-objective entities, and has led to an arbitrary and unjustified limitation to the range of noetic objects. After explaining his position, the author discusses its implications for the concept of ideas as universals, the analysis of memory and imagination, and the correspondence theory of truth.

PEARSON, Lionel. Real And Conventional Personalities In Greek History. *J Hist Ideas* 15,136-145 Ja 54.

PECCORINI, Francisco. *A Method Of Self-Oriented Thinking.* NY Pageant Pr Inter 1970.

It is shown that "believing"—Kant's answer to his own question, "Was heisst sich im denken orientieren?"—is a genuine way of "being sure" because it rests on the principle of the "unconditioned condition," whereby reason is urged to always exhaustively check all its accounting alternatives. The foundation of this principle, in turn, is traced to the "critical" updating of the "principle of determining reason," in which Kant had grounded Metaphysics in 1755, namely, to the principle of all synthetic "a priori" judgments on which the whole possible experience rests. Kant's habits of reasoning, in general, and the teleological principle's deduction in particular, are shown to be based on this critical principle.

PECHURO, E E. *History And Theory*, Vol I, 1 To Vol III, 2 (Edited By George H Nadel). *Hist Theor* 4,359–367 1965.

PECK, A L. Plato's *Sophist*: The Συμπλοκή Τῶν Εἰδῶν. *Phronesis* 7,46–66 1962.

PECK, Arthur L. Plato Versus Parmenides. *Phil Rev* 71,159–184 Ap 62.

Peck criticizes Vlastos' discussion of the Third Man argument ("The Third Man argument in the *Parmenides*," *Phil Rev*, 63, 319–349) for isolating Parmenides' argument from its context. Vlastos makes the unjustified distinction between a substantival and an adjectival F (F stands for a property word). He further tries to defend a non-existent non-sequitur in Parmenides' argument by his appeal to the "Self Predication Assumption." Peck also discusses the "Copy-Likeness" argument and the "Mastership" argument, as well as Plato's notion of soul and the light it sheds on the connection between the Forms and the sensible world.

PEGIS, A and Gilson, E. *St Thomas Aquinas And Philosophy.* West Hartford CT St Joseph College 1961.

PEGIS, Anton C. *At The Origins Of The Thomistic Notion Of Man.* NY Macmillan 1963.

In this Augustine lecture, Dr Pegis reconsiders a theme which he first broached in his doctoral dissertation: the teaching on the human soul in thirteenth-century philosophy. He now argues forcefully that, while the Thomistic explanation of human functioning appears to be Aristotelian, in actual fact the doctrine is rooted in the thought of Augustine of Hippo. The study also reviews something of the Greek Christian background of thirteenth-century psychology. An appendix provides translations of three selections from Nemesius' *On the Nature of Man*.

PEIKOFF, Leonard. Altruism, Pragmatism And Brutality. *Ayn Rand Lett* 2, no 5 4 D 72.

An analysis of Nazi moral teachings reveals a union of altruism and pragmatism; these theories are the base used by the Nazis to justify brutal amorality.

PEIKOFF, Leonard. America's Philosophic Origin. *Ayn Rand Lett* 3, no 5 3 De 73.

The thesis of this article is that the political individualism which characterized the United States of America at its birth was the product of the dominant philosophy of the age—that America is the nation of the Enlightenment. The article delineates the dominant themes of the Enlightenment—its Aristotelian respect for nature, reason, man and earthly happiness, and its legendary epistemological and moral self-confidence—and shows how American political theory and the American system of government were built upon this base.

PEIKOFF, Leonard. Dogmatism, Pragmatism And Nazism. *Object* 9, no 4 Ap 70.

This essay discusses the union of religious dogmatism and pragmatist relativism in Nazi ideology, identifying the common denominator in these two doctrines which makes such a union possible. The influence of William James on Nazism is examined in this connection.

PEIKOFF, Leonard. Kant And Self-Sacrifice. *Object* 10, no 9 S 71.

This essay presents—and attacks—the principles of Kant's ethical system. Kant, it is maintained, is the first philosopher to advocate self-sacrifice as an end in itself and as a matter of philosophical principle essentially uncontradicted by any remnant of the Greek pro-self viewpoint.

PEIKOFF, Leonard. Nazi Politics. *Object* 8, no 2 F 69.

The author's forthcoming book, *The Ominous Parallels*, develops the theme that Germany's philosophical tradition was the root cause of the rise of Nazism. This excerpt identifies the Nazi political philosophy as a form of collectivism, and traces its philosophical roots and their historical development from Plato through Kant and Hegel to the twentieth century.

PEIKOFF, Leonard. Nazism And Subjectivism. *Object* 10, no 1 Ja 71.

The essence of Nazi epistemology is irrationalism, in the form of a combination of religious dogmatism and pragmatist relativism. Implicit in this is a third theory: subjectivism. This article examines the nature of subjectivism and traces its philosophical history from the early modern period to its adoption by the Nazis. The author discusses the political and practical implications of subjectivism in Nazi Germany.

PEIKOFF, Leonard. Nazism Versus Reason. *Object* 8, no 10 O 69.

This article locates the roots of Nazi totalitarianism in the irrationalist theories central to Nazi doctrine. The author traces the development of irrationalism from the decline of the Enlightenment through the German romantic tradition.

PEIKOFF, Leonard. Pragmatism Versus America. *Ayn Rand Lett* 3, no 16 6 My 74.

A companion-piece to the author's "America's Philosophic Origin," this article presents systematically the pragmatist philosophy of James and Dewey, and demonstrates that on every major issue, from metaphysics to politics, it is the antithesis of the philosophy of the Enlightenment, which gave birth to the United States.

PEIKOFF, Leonard. The Analytic-Synthetic Dichotomy. *Object* 6, no 5 My 67.

Working from the theory of concepts presented in Ayn Rand's *Introduction to Objectivist Epistemology*, this essay develops a full-scale attack on the analytic-synthetic dichotomy (and the associated *a priori*–*a posteriori*, necessary–contingent and logical–empirical distinctions). The historical background of the dichotomy is traced, and its epistemological and metaphysical roots are systematically identified and rejected.

PEISER, Werner. Aristotelianism And Thomism In Romanic Literature. *New Scholas* 16,365–392 O 42.

PELIKAN, Jaroslav. *From Luther To Kierkegaard: A Study In The History Of Theology.* St Louis Concordia 1950.

The book analyzes the interrelations that have existed between Lutheran theology and philosophical thought since the days of the Reformation. The author begins with an evaluation of the philosophical influences upon Luther's theology and examines the philosophical implications of his theological work. The influence of Melancthon's Aristotelianism on the philosophical tone of Lutheran theology is then treated, and another chapter describes the philosophical development of 17th century orthodox theology. The breakup of Lutheran theology under the impact of Rationalist theology is indicated, and the author then shows how Kant destroyed the foundations of Rationalism. A final chapter traces the development after Kant, indicating the various directions in which Lutheran theology went until, in Kierkegaard, many of Luther's basic insights were restored.

PELL, Elsie Estelle. *François Mauriac, In Search Of The Infinite.* NY Philosophical Lib 1947.

PELLES, Geraldine. The Image Of The Artist. *J Aes Art Crit* 21,119–138 Wint 62.

PELTZ, Richard W. Indexical Sentences And Cartesian Rationalism. *Phil Phenomenol Res* 27,80–84 S 66.

In *Meditation* I, Descartes apparently casts doubt on his ultimate rationalistic criterion of clear and distinct conception by invoking the evil genius. This doubt applies to two kinds of statements: those based on evidence of the senses and mathematical statements. "I am," however, is of a different logical kind, an indexical sentence, and thus may escape even the doubt created by the evil genius, being grounded only in clear and distinct conception. Indexical sentences cannot be separated from their pragmatic contexts of utterance in the way nonindexical sentences can. All sentences of the latter kind require a divine guarantee; some of the former do not. *meditation* V suggests that Descartes was aware of the logical difference between sentences like "2+2=4" and "I am." Similarly, the passage in the *Discourse on Method*, which invokes the divine guarantee, confines itself solely to the problem of truth in nonindexical sentences.

PELTZ, Richard W. Indexical Sentences And Nonformal "Logical" Relations. *Phil Stud* 13,39-42 1962.

PELTZ, Richard W. The Logic Of The *Cogito*. *Phil Phenomenol Res* 23,256-262 D 62.

PELTZ, Richard. Ontology And The Work Of Art. *J Aes Art Crit* 24,487-500 Sum 66.

PENDERGAST, Richard J. *Cosmos*. Bronx NY Fordham Univ Pr 1973.

The book is an attempt to wed traditional theological ideas with modern physics and developmental psychology. The author uses a "modified dualism" to achieve his aim, building on an alleged parallelism between cosmic and personal development." An interesting exercise, but not particularly convincing to the non-believer.

PENELHUM, T and Kennick, W E and Isenberg, A I. Symposium: Pleasure And Falsity. *Amer Phil Quart* 1,81-100 Ap 64.

PENELHUM, Terence (ed). *Immortality*. Belmont CA Wadsworth 1973.

PENELHUM, Terence. *Religion And Rationality: An Introduction To The Philosophy Of Religion*. NY Random House 1971.

PENELHUM, Terence. *Survival And Disembodied Existence*. NY Humanities Pr 1970.

The book casts doubt on the intelligibility of the notion of survival in a disembodied state because of the need for a reference to the body to define identity. For this purpose even veridical memories are regarded as incapable of providing sufficient criteria because of the impossibility of logically ruling out the possession of memories of another man. Reincarnation and change of bodies are also discussed briefly.

PENNOCK, J Roland (ed) and Chapman, John W (ed). *Equality*. NY Atherton Pr 1967.

The ninth yearbook of the American Society for Political and Legal Philosophy contains eighteen essays. The first six essays discuss the various meanings of "equality" and the various kinds of egalitarianism. The next five essays consider the roles of equality in Christianity, Judaism, Hinduism, and existentialism. And the final seven essays examine political equality as it applies to the individual and to nations.

PENNOCK, James Roland (ed) and Chapman, J W (ed). *The Limits Of Law*. NY Lieber-Atherton 1974.

PEPLER, Conrad. Man In Medieval Thought. *Thomist* 12,136-154 Ap 49.

PEPPER, George B. A Re-examination Of The Ideal Type Concept. *Catholic Sociological Review* 24,185-201 Fall 63.

The following contention is contended: Ideal type concepts function in social theory only as preliminary devices which must eventually give way to operational formulations. For Max Weber, while ideal type concepts may instigate operational explanations, they have an abiding role in social theory because only they can explain the unique quality of the value-relevance of social data. For Talcott Parsons, ideal types are composed of two different kinds of concepts which represent elements that may vary independently of each other. With this distinction, Parsons demonstrates the possibility of combining a general analytic theory with type analysis. He also develops ideal type concepts on the level of general analytic theory with his distinction of "pattern variables."

PEPPER, George B. Anthropology, Science Or Humanity? *Anthropological Quarterly* 34,150-157 Jl 61.

The issue evaluated is whether Cultural Anthropology is a natural science or a humanistic study. After the views of various cultural anthropologists and philosophers are critically examined, the thesis advanced is that Cultural Anthropology is an interdisciplinary study. The uniqueness that characterizes each culture is best explained in humanistic terms, but the physical, physiological, and sociological processes which are intimately conjoined to that uniqueness are best explained by the analytic methods of the natural sciences. By restricting the study of culture to one or the other, the student of culture would be separating what in fact is united.

PEPPER, George B. Leslie A White's Theory Of Cultural Evolution. *Amer Cath Social Rev* 21,319-330 Wint 60.

The theory of culture first developed by Leslie A White and later elaborated by others is critically examined. Three central deficiencies in this theory are identified: (1) the importance of human personality for culture theory is wrongly denigrated; (2) the technological system within a culture is given a causal power far in excess of what the facts allow; and, (3) an untenable form of unilinear social evolution is advanced. Deficiency (1) is exposed by showing that the human mind is not reducible to technological and environmental conditioning as the philosophical analyses of Aristotle and C S Peirce prove. Deficiency (2) is demonstrated by appeal to historical evidence which manifest that ideological sources antedate technological ones for some significant social changes. Although White's unilinear view of cultural evolution can be reconciled with the many independent social developments that take place in the world by distinguishing between Special and General Evolution, deficiency (3) becomes evident when White attributes an inevitable and mystical power to the technological system.

PEPPER, Stephen C. *Ethics*. NY 1960.

PEPPER, Stephen C. *The Basis Of Criticism In The Arts*. Cambridge Harvard Univ Pr 1945.

Deciding that there are four tenable philosophic points of view, Professor Pepper examines the implications of each of these for the critic, in the chapters on

Mechanistic Criticism, Contextualistic Criticism, Organistic Criticism, and Formistic Criticism. A supplementary essay, though on "The Aesthetic Work of Art," analyzes the total aesthetic field: subject, object, perceptive series, perceptual grasp. In a final cursory sweep through painting, music, literature, and the dance, Professor Pepper subdivides the field into twelve major elements in the aesthetic process, which he then links to the four main points of view.

PEPPER, Stephen C. *The Sources Of Value*. Berkeley Univ Of Calif Pr 1958.

This book is a systematic presentation of the whole question of value, its nature and sources. The program is to enter the study of the common sense field of value by way of purposive behavior, and thence work, area by area, over the whole field. The hope is to find the basis for well-grounded decisions for action. Pepper first notes common fallacies, then criticizes the prevalent linguistic approach as inadequate, and finally turns in the direction of the empirical inquiry. On the psychological side he has been influenced by Tolman's work on purposive behavior. He proceeds systematically and examines carefully both appetition and aversion. This leads him to stress the importance of quiescence, that is, the completion of the drive, as terminal rather than what he calls the goal-object. He calls attention to the complexities of developed purposes in the way of cognition, means-end ordering and what he designates independence mutations. One notes, also, his use of Lewin's life-space schematism and his application of Darwinian motives. The whole outlook is naturalistic and empirical.

PEPPER, Stephen C. *The Work Of Art*. Bloomington Indiana Univ Pr 1955.

The work of art which is the object of criticism is "the totality of relevant material based on the perceptions stimulated by an aesthetic vehicle" in a discriminating spectator, according to Professor Pepper in this sequel to his *Basis of Criticism in the Arts*. He maintains that judgments of beauty, being "either descriptions of natural consummatory norms, or else comparisons of men's fugitive perceptions with these norms," may be true. Other lectures discuss "The Dynamics of the Master-piece," "The Control Object," "A Reply to Extreme Relativists in Criticism," and "The Concept of Fusion in Dewey's Aesthetic Theory."

PEPPER, Stephen C. *World Hypotheses; A Study In Evidence*. Berkeley Univ Of Calif Pr 1961.

This book is an analytical study which stresses issues rather than men. It makes a successful attempt to trace the source of these issues, and to show that some are unnecessary, and that the rest gather into clusters and are interconnected in systems closely corresponding to the traditional schools of philosophy.

 PERELMAN, Ch. Theoretical Relations Of Thought And Action. *Phil Today* 4,138-143 Sum 60.
 PERELMAN, C H. *The Idea Of Justice And The Problem Of Argument*. NY Humanities Pr 1963.
 A series of papers published in various journals, some translated from French by J Petrie, some in the original English. The book is concerned mainly with vindicating those weaker but still valuable arguments which logicians and philosophers have been apt to despise because they did not give strict proof. Professor Perelman has moral philosophy especially but not exclusively in mind. He thinks that the philosopher has much to learn from arguments in the field of law. His realisation of the rationality of these less rigorous forms of argument led him to abandon the view of the first paper that justice was merely the non-arbitrary carrying out of value judgments which were themselves arbitrary. The work does not however include a detailed survey of these types of argument.
 PERELMAN, C and Olbrechts-Tyteca, L. Act And Person In Argument. *Ethics* 61,251-269 Jl 51.
 PERELMAN, Chaim H. *Justice*. NY Random House 1967.
 The main problem this book attempts to solve is the relation of justice to reason. In the preliminary chapters the formal principle of justice (that like cases be treated alike) is discussed and the question raised whether one can go beyond this formal statement to provide rational criteria for ascertaining the justice of rules. In the chapters on "Justice and Justification" and "Justice and Reason," the author rejects his earlier view that judgments of value rest on arbitrary choice and argues that there is a model of reasoning appropriate to decision which is neither the sciences nor the model of arbitrary axiomatic systems. That model, suggested in the appendix "What the philosopher may learn from the study of law," is the judicial model—a model which allows for the disagreement of reasonable men. This model enables one to go from a political conception of justice in which laws are just, not arbitrary, because they conform to the values of a particular community, to a philosophical conception of justice that allows for criticism and justification of the rules of particular political communities.

 Perkins is criticizing Errol Bedford's essay "emotions" (*Aristotelian Society Proceedings*, Volume 57, Pages 281-304). Bedford held that statements referring to emotions are not reports of feelings, but are appraisals; and further that an emotion is not a kind of experience. Perkins argues that the primary verb used with "emotion" is "feel," that an emotion is a kind of experience, and that bodily feeling plays a central role in emotional experiences.

 Ludwig Wittgenstein's argument of 202, 2s8-2s9, *Ιηφεστιγαιονα*, occurs as a formal deduction amounting, informally, to a proof that the falsehood of R, "Smith uses 'E' to refer" is entailed by truth of U, "No one else can understand Smith's use of 'E'." given these three premises: (1) If (Smith's use of 'E' is part of a practice), then not
 (2) If not P, then not (Smith either uses 'E' correctly or incorrectly). (3) If P, then C. But a dilemma arises: if 'practice' means "social practice," (2) is false, by Ludwig Wittgenstein's own 243 "ὁ πραχτικῆς ἀλλοῦς ὁσὺταρον πραχτικῆς," [1] ὁ ὑπερῶνδῃ 206-207 γὰρ ποσὶβλε γρουνδῶ θορ [1], βὺτ τρεσε ἀρε νοτ οριγινῶλ ἡ Ἀυδωγ ὤιτγενσεῖν'σ.  Toulmin has advanced two erroneous positions: 1) that showing an act falls under an accepted practice conclusively shows it is right; and 2) that a social practice can be evaluated morally only if it would be practicable to change it. Regarding the first, commonly accepted practices and acts falling under them may be condemned morally. Regarding the second, a claim that a social change is not practicable is itself a moral appraisal. Further, not all objects of moral appraisal need be possible ends of actions.
 PERRY, David L. Prediction, Explanation And Freedom. *Monist* 49,234-247 Ap 65.
 Application of a *Spectator's* categories does not preclude an *Agent's* freedom. An agent cannot deliberate while anticipating his own decision, but deliberation is compatible with prediction of its outcome by a separate spectator. Prediction and explanation as such do not rule out freedom, although some bases for predicting and explaining intentions do preclude it. Misinterpretation of the fact that the agent category, reason, is not the spectator category, cause, may erroneously prompt denial that rational processes can be psychological causes.
 PERRY, David L. What Things Can Be Evaluated. *J Phil* 61,186-191 Mr 64.
 A thing can be evaluated just in case it belongs to a class of things for which there are criteria. R M Hare's view that there are criteria only for classes among whose members we conceivably might need to choose, is not altogether correct. Finally, there would seem to be no objects we would bother to identify which we could not evaluate as members of some class of comparison.

 PERRY, Ralph Barton. *Characteristically American*. NY Knopf 1949.
 "What is it to be American—in thought and deed and feeling?" Many have asked that question, and will continue to do so, but few are better equipped to answer it than the deliverer of these five lectures on the William W Cook Foundation at the University of Michigan late in 1948. If allowed only one word for his answer, it would be "individualism"; but if two were permitted, the qualifier "collective" would be added. Yet "collective individualism" says poorly what Professor Perry goes on to characterize very well, the American faith in man and in what he can accomplish by voluntarily united effort. "Inventive optimism, which moves mountains by learning how and applying the necessary leverage" is a better capsule sketch of it.
 PERRY, Ralph Barton. *Our Side Is Right*. Cambridge Harvard Univ Pr 1942.
 In his first chapter, which supplies the title to the whole volume, Professor Perry discusses two doctrines that undermine belief in the rightness of our cause, viz. the "wave" theory and moral relativism. In the second chapter, "Democracy at the Cross-Roads," the aims and the spirit of democracy are defined, and the hazards described to which democracy is exposed.

PERRY, Ralph Barton. *Puritanism And Democracy.* NY Vanguard Pr 1944.

PERRY, Ralph Barton. *Realms Of Value: A Critique Of Human Civilization.* Cambridge Harvard Univ Pr 1954.

Separate chapters are devoted to such realms as politics, law, economics, science, art, history, education, and religion. Of each of these major enterprises of man, Perry asks three questions: "What is its role in human life? How well do its existing forms perform this role? By what ideal standard is it to be appraised?" The book's first five chapters, however, consist of a review of Perry's own interest theory of value in the light of three decades of criticism. The next seven chapters are largely devoted to problems of morality and ethics.

PERRY, Ralph Barton. *Shall Not Perish From The Earth.* NY Vanguard Pr 1940.

In this book militant democracy is analyzed into its philosophic antecedents and contrasted with the roots of totalitarianism. For individualism in the one, there is uniformitarianism in the other; rationalism opposed to anti-intellectualism, universalism to tribalism and moral purposiveness to what the author calls, technicism. Aside from the development of the foregoing thesis throughout the volume, the best chapter is the second with its brief history of American philosophy making the telling point that, however foreign the source, each of the schools and theories was tempered by individualism, the prime characteristic of the genius of this country, one of the basic notions in the creed that is American democracy.

PERRY, Rosalie Sandra. *Charles Ives And The American Mind.* Kent OH Kent State Univ Pr 1974.

This book is an argument that Ives's music reflects the central developments in his culture. Emerson's transcendentalism is presented as a major influence, along with its offshoots: stream-of-consciousness psychology, philosophic realism of a sort, religious revivalism and the social gospel, and a vague scientific pragmatism. Ives is said to have absorbed from this milieu the view that universal truths can be revealed in music through commonplace elements by use of free association and experimentation to lead the listener beyond anything heard.

PERSONS, Stow. *American Minds; A History Of Ideas.* NY Holt 1958.

This is an introduction to the history of American thought. Not an encyclopedia, it is designed to describe the principal ideas or "minds" that determined American intellectual life during its historical development. A "social mind" refers to the ideas and attitudes that give a society its individuality and binds together its members. There have been five such social minds in America: The Colonial Religious Mind (1620-60); The Mind of the American Enlightenment (1740-1812); The Mind of Nineteenth-Century Democracy (1800-60); The Naturalistic Mind (1865-1929); The Contemporary Neo-democratic Mind. This book discusses the leading characteristics of each successive social mind and its representative thinkers and movements. It is concerned primarily with the intellectual functions of the social mind. It argues that the formation of a social mind or cultural identity was especially difficult in America because of its diverse origins and the dispersal of its people; and that intellectual life is rooted in community.

PETERS, Eugene H. *Hartshorne And Neoclassical Metaphysics: An Interpretation.* Lincoln 1970.

Peters represents Hartshorne's philosophy as a new system of metaphysics. Evidence of the systematic nature of Hartshorne's thought is found in the interrelatedness of the topics discussed, the assumptions underlying his arguments, and certain pervasive themes. After a short biographical sketch, separate chapters are devoted to Hartshorne's methodology, panpsychism, determinism and time, and theism. The methodological principle which is supposed to provide the key to Hartshorne's conception of metaphysics is that "a metaphysical truth is one whose denial results in incoherence." His axioms are said to include the rationalist and idealist assumptions that "reason is to be trusted," "to be... is to be capable of being known," and "the known is contained in the knower."

PETERSON, Forrest H. *A Philosophy Of Man And Society.* NY Philosophical Lib 1970.

This book deals with the problem of the relation between man and society. The three great forces of culture, ideology and technology, continuously creating society, are discussed ontologically, historically and ethically. Beginning with existence as the basis of all enquiry, Greek philosophy, Machiavelli, Hobbes, Locke, Rousseau, Comte, Hegel, Marx and Dewey are examined critically in connection with the concepts of value, class, power, ideology, history and man as a social component. The concluding chapters deal with the ideological challenge of the Twentieth Century. Education, in fact universal education, has the most important role to play in the continual renewal and preservation of society. To this end the professional role of the teacher and his relation to the society, which has lost its meaning, must be recaptured.

PETERSON, James Allan. *Counseling And Values: A Philosophical Examination.* Scranton PA Internl Textbook 1970.

PETERSON, Penny and O'Connell, Walter. Humor And Repression. *J Existent* 4,309-316 Spr 64.

PETERSON, Philip L. On Specific Reference. *Semantikos* 1,63-82 1976.

The nature of specific references, being those that "pick out" an entity because the speaker has it "in mind" and/or "knows which it is", is pursued by considering the grammatical distinction of specific/non-specific indefinite noun phrases. Vendler's theory of singular terms is examined in order to show how the grammatical distinction arises. Although the grammatical distinction appears to render Vendler's theory circular, one way to avoid circularity is to take Russell's theory to be a theory of specific indefinite noun phrases. Identifying grammatical specificity with specific reference (an extension of Donnellan's distinction) turns out to be impossible.

PETROVIC, Gajo. *Marx In The Mid-Twentieth Century: A Yugoslav Philosopher Reconsiders Karl Marx's Writings.* NY Doubleday 1967.

In order "to penetrate to the essence of Marx's original thought and to think further in its spirit about the momentous philosophical questions of the contemporary world and man," three major kinds of issues are treated. The first kind, general and historical-philosophical, includes the relation between philosophy and Marxism, the essence and continuity of Marx's early and late thought, and dialectical and dogmatic materialism as opposed to creative Marxism. The second kind, philosophical anthropology, includes man, praxis, freedom, alienation, de-alienation, socialism, and humanism. The third kind includes praxis and being, truth and reflection; meaning, and logic and mathematics. Significant is the stress on humanism and freedom and the opposition to Stalinism in Marxism, with its dogmatism, nihilism, political domination, and economism. This work reflects the philosophical and political controversies that have occupied Yugoslav thinkers in two decades following the war.

PETROVIC, Gajo. Marx's Theory Of Alienation (translation). *Phil Phenomenol Res* 23,419-426 Mr 63.

The purpose is to stimulate discussion about some questions which necessarily arise in connection with Marx's theory of alienation. Some Marxists think there is no problem and others just comment on what Marx said and avoid what is controversial. The problem is posed whether self-alienation is merely historical, characterizing only one stage in the historical development of man or whether it is a permanent (non temporal) structural moment of human existence. The discussion here centers around the issue of how alienation could be essentially related to the nature of history.

PEFFER, Rose. *Nietzsche: Disciple Of Dionysus*. Lewisburg PA Bucknell Univ Pr 1972.

Arguing that Nietzsche held a unified world view, this interpretation organizes his leading ideas by connecting them to the central symbol of Dionysus, which is explicated in terms of nihilism and the tragic with their implications for art and the meaning of truth. Nietzsche's doctrine of the eternal recurrence is held to be "a new ethics that is free of moral imperatives, guilt, responsibility, and resentment." The innocence of becoming is understood as the natural dialectic of creation and destruction without external purpose or aim, best imitated by man in playful aesthetic activity which overcomes opposites and contradictions by transcending them "in a Dionysian celebration of life and in his faith in the potential of man: his integrity, his courage and his will to create."

PEFFER, Rose. Eternal Recurrence In Nietzsche's Philosophy. *Rev Metaph* 19,276-300 D 65.

Approaching the idea from three viewpoints, the author contends that eternal recurrence is a central and unifying theme in Nietzsche's thought. She first considers its scientific basis, arguing for a reinterpretation of the doctrine because Nietzsche did not subscribe to the classical atomism of his time. She then considers the idea in its metaphysical perspective: it represents a repudiation of Platonism and an affirmation of life. Finally, urging the unity of the metaphysical and the ethical in Nietzsche's philosophy, the author interprets eternal recurrence as an idea created by life itself to serve life by strengthening the will to power.

PFEL, Hans. The Modern Denial Of God. *Phil Today* 3,19-27 Spr 59.

PFUTZ, Paul E. *The Social Self*. NY Bookman 1954.

This critical comparison of the conception of the "social self" held by G H Mead and Martin Buber shows that in spite of divergencies in methodology and philosophical tradition, their positions are strikingly similar. The chief substantive difference between the two philosophers is that Buber's conception includes man's relations to the world of things and to God, whereas Mead's is strictly human. The author concludes that Mead's analysis needs amendment in the direction of Buber's theocentric personalism as being a richer, truer statement of the total human situation.

PFUTZ, Paul. *Martin Buber: Philosopher Of The Personal*. Athens Univ Of Georgia Pr 1952.

PHELAN, Gerald B. *Saint Thomas And Analogy*. Milwaukee Marquette Univ Pr 1941.
Father Phelan introduces the subject of this lecture by asserting, after Cajetan, that "without an understanding of the doctrine of analogy it is impossible to acquire a knowledge of metaphysics." While this paper does not claim to give a full exposition of the doctrine, it does undertake to make explicit the special meaning of the word "analogy" as employed in metaphysics.

PHILIX, Philip H. *Education And The Common Good: A Moral Philosophy Of The Curriculum*. NY Harper & Brothers 1961.

Education in family and school should prepare people to meet "with courage and competence" the major problems of contemporary civilization. It should be based on a concept of value as commitment to objective, universal goodness rather than as satisfaction of desire, and on an ideal of democracy expressive of this moral commitment. Accordingly, intellect, mass media of communication, esthetic excellence, manners, work, recreation, nature, health, sex, social class, race, economic life, political organization, world responsibility, and religion—exemplifying the "pivotal values" of intelligence, creativity, conscience, and reverence—are treated in ways in which persons can and ought to learn to meet their problems with ultimate concern.

PHILIX, Philip H. *Man And His Becoming*. New Brunswick NJ Rutgers Pr 1964.

Understanding man requires an integrated philosophical picture of his three major aspects—body, mind, and spirit. The natural sciences and mathematics deal with man's universal properties; the social sciences, with his limited relational properties; the humanities, with his unique properties. Scientific technology, with its prediction

and control of natural processes, discloses human powers too and an intelligible nature like man which conditions his freedom. The natural sciences exhibit humanity in their universality of agreement and their commitment to standards like truth, binding on all men. The life-sciences, studying man, show that he is a self-consistent identity in a universal process of construction. The social sciences describe distinctively human functions—symbolization, culture, community. The humanities are concerned with unique, singular, concrete experiences, the immortal in the mortal. This work shows how each human discipline, analyzed philosophically, reveals man as a unity of body, mind, and spirit.

PHILIX, Philip H. Educational Theory And Inspiration. *Educ Theor* 13,1-5 Ja 63.

PHILIX, Philip Henry. *Intelligible Religion*. NY Harper 1954.

The author argues that religious beliefs and practices become "intelligible"—and rationally defensible—when they are seen as based upon five fundamental and universal types of human experience: change, dependence, order, value, and imperfection. From this point of view, God is "a kind of dimension or complex of dimensions made manifest in all our experience," and the variety of other aspects of religion are likewise more or less "symbolic" expressions of man's attempts to make his five fundamental experiences meaningful. The analysis suggested by this interpretation is applied by the author to some traditional religious problems such as those of good and evil, a future life, and the significance of Christ.

PHILBRICK, Frederick A. *Language And The Law: The Semantics Of Forensic English*. NY Macmillan 1949.

"It is important in many fields of study, and not the least in the law," says the author with meaningful implication for theories of natural law, "to get a firm grasp of the fact that abstract words have no fixed or 'correct' meanings. The theory, for example, that there is such a thing as justice that exists independently of human minds, and that the business of the law is to find out what it is, will not stand examination.... An abstract word has no correct meaning, never has had one, never will have one, and in the nature of things never can have one. For the lawyer, semantics has no more useful lesson." The concluding section gives in detail the facts of four famous cases and how counsel unconsciously employed the semantic principles here developed. He emphasizes the two prime uses of language in the law to convey facts and to arouse emotion.

PHILPOV, Alexander. *Logic And Dialectic In The Soviet Union*. NY East European Fund 1952.

This book analyzes the history of the employment of dialectic and logic in Soviet thought. Four stages are delineated: (1) the supremacy of dialectic until 1946; (2) the introduction of logic in school curricula in 1946; (3) the official reaction against "logical formalism" in 1948; and (4) the reemphasizing of logic and the virtual suppression of dialectic precipitated by Stalin's "On Marxism in Linguistics" (1950). Special attention is given to this latter work and its significance for the future, as well as to the logical writings of Asmus and Strogovich. The recent stress upon formal logic is interpreted as an attempt on the part of the Soviet government to preclude dialectical justification of any possible further revolutionary change.

PHILIPPE, M D. The Assumption In The Spiritual Life. *Thomist* 14,93-108 Ja 51.

PHILIPSON, M H. Some Reflections On Tragedy. *J Phil* 55,197-202 F 58.

PHILIPSON, Morris. *Outline Of A Jungian Aesthetics*. Evanston IL 1963.

The author recognizes that Jung objected to reducing the "total" meaning of the work of art to psychology and that it must not be treated in exclusively autobiographical terms. On this basis he proceeds to examine Jung's broader theory of man in order to use his as the proper context for a discussion of Jung's views on aesthetics and art. A basic chapter in this book is the one in which he treats the concept of symbol in Jung's psychology. In the second part of the book the author gives an outline of the Jungian aesthetic by first exhibiting its differences with the Freudian position and then offering an examination of such central topics as the work of art in its psychological and visionary modes. Part three concludes with a discussion of the psychic significance of art works and the creative process and the broader philosophical and cultural issues of universals, archetypes, psychological and epistemological aspects of symbolism that give the Jungian aesthetics its special character.

PHILIPSON, Morris. Dilthey On Art. *J Aes Art Crit* 17,72-76 S 58.

PHILLIPS, C W. A Note On The Negative Norm. *Mod Sch* 23,55-60 Ja 46.

PHILLIPS, D Z and Dilman, Ilham. *Sense And Delusion*. NY Humanities Pr 1971.

The alternate chapters of the book, written specifically by the authors in turn, form a kind of dialogue, although not a very contentious dialogue, between them. The chief problems are how one can pass the judgment on another man's life that it was meaningless, or come to recognize this of one's own past life and what the nature is of moral self-deception. They are illustrated in particular by a detailed consideration of parts of Tolstoy's novel, *The Death of Ivan Ilych*.

- PIKE, Nelson C.** Plantinga On The Free Will Defense: A Reply. *J Phil* 63,93–104 F 66.
- Plantinga contends that the argument against the existence of God offered by Flew and Mackie is deficient because the statement "God is omnipotent, omniscient, and all good" does not (as Flew and Mackie claim it does) entail "God creates no person who performs a morally wrong action." Plantinga's argument is stimulating and rigorous but it involves a mistake. Pike examines Plantinga's argument to show how it fails to reveal an inadequacy in the argument against the existence of God advanced by Flew and Mackie.
- PIKE, Nelson.** Divine Omniscience And Voluntary Action. *Phil Rev* 74,27–46 Ja 65.
- Pike argues that if an omniscient God exists, then no human action is voluntary. If God knew eighty years ago that Jones would mow his lawn last Saturday, then it was not in Jones' power last Saturday to refrain from mowing his lawn. To have this power to refrain, Jones would have to have the power on Saturday to do something that would make it the case that God did not hold the belief that he held (that Jones would now his lawn) eighty years ago; or else the power to make God's belief eighty years ago false. But neither retro-active causation nor making God's beliefs false is a coherent notion.
- PIKE, Nelson.** God And Evil: A Reconsideration. *Ethics* 68,116–124 Ja 58.
- PIKE, Nelson.** Hume On Evil. *Phil Rev* 72,180–197 Ap 63.
- Pike argues that Hume's argument for atheism based on the logical incompatibility of God and evil in the *Dialogues Concerning Natural Religion* is unconvincing. A being who permits suffering might be perfectly good providing only that there is a morally sufficient reason for his action. There may be difficulties showing what such a reason would be for God, but this problem does not constitute a logical incompatibility between God and evil.
- PIKE, Nelson.** Of God And Freedom: A Rejoinder. *Phil Rev* 75,369–379 Jl 66.
- Pike is replying to Saunders' criticism in "Of God and Freedom," (*Philosophical Review* Volume 75, Pages 219–225). He argues that Saunders' supposed counterexample is not a counterexample to any principle he had used, and that the case is too singular to serve as a model from which to construct a counterexample. Pike closes by suggesting that one line of thinking in Saunders is illuminating in regard to our application of the concepts of belief and person to a God who is analytically omniscient.
- PILLEY, John.** Educational Theory And The Making Of Teachers. *Educ Theor* 3,31–40 Ja 53.
- PINCOFFS, Edmund L.** *The Rationale Of Legal Punishment.* NY Humanities Pr 1966.
- The author presents the traditional arguments advanced to justify legal punishment, carefully examines their strengths and weaknesses, and constructs his own justification for legal punishment. He considers the arguments of the retributivists, and of the utilitarians, and contends that they are defensible. He shows that, far from being purists in theory, legislators in making laws and judges in applying penalties customarily appeal to justifying arguments from both competing theories. After rejecting the view that treatment by psychiatrists should replace punishment in all cases of criminal conduct, the author presents his case for legal punishment, maintaining that "there are better reasons for retaining than for abolishing it."
- PINCOFFS, Edmund L.** Objectivity And Henry Aiken. *J Phil* 61,192–197 Mr 64.
- In his paper, "The Concept of Moral Objectivity," Aiken raises and answers certain questions about the concept of moral objectivity, notably, the question whether moral objectivity and freedom are compatible. The present comment argues that Aiken's analysis of objectivity cannot be reconciled with our understanding of that term and also that it fails to resolve the impasse between moral objectivists and autonomists. Two uses of 'principle' are then distinguished, and it is argued that, granted this distinction, the "antinomy" of moral objectivity and freedom disappears.

- PITCHER, George.** On Approval. *Phil Rev* 67,195–211 Ap 58.
- PITKIN, Hanna Fenichel.** *Wittgenstein And Justice; On The Significance Of Ludwig Wittgenstein For Social And Political Thought.* Berkeley Univ Of Calif Pr 1972.
- Wittgenstein's and subsequently others' two visions of language transformed traditional philosophic problems. Overcoming the view of language as referential and descriptive, problems of meaning, and learning can be approached in terms of context, words and worlds, grammar and forms of life, etc., which tell us more about the nature and function of philosophy. The philosophic approach of the "later" Wittgenstein in this way can be extrapolated to political and social theory. Action in the social sciences then can be clarified through performatory and judgmental models of explanation and freedom. In this way philosophy contributes to the study of political theory.

- PLANTINGA, Alvin.** Induction And Other Minds. *Rev Metaph* 19,441-461 Mr 66.
- Centering on the observation of pain behavior as purported evidence for the existence of other minds, the author advances a line of objection to the traditional analogical argument as typified by a passage from A J Ayer. He critically analyzes the logic of such inductive reasoning and concludes that for lack of a valid criterion the analogical position is untenable, that is, the claim to infer the sensation of pain in another body is logically indefensible.
- PLANTINGA, Alvin.** It's Actual, So It Must Be Possible. *Phil Stud* 12,61-64 1961.
- In an earlier paper Norwood Hanson argues that the following two propositions are inconsistent: (A) If P is true, then P is logically possible and B. If P is logically contingent, then P entails no necessary propositions. They are inconsistent, says Hanson, for it can be demonstrated that: C. If P is logically contingent, then "P is logically possible" is necessary. Further, he argues, by the first principle P entails "P is possible," while by principle C, "P is possible" is necessary; hence a necessary proposition is entailed by a contingent one, which contradicts principle B. The author argues that what Hanson has actually shown is that the conjunction of "P is contingent" with "P is logically impossible" is contradictory, which, he says, is quite different from what he claims to prove.

- The Aristotelian-Thomistic cosmology is not adequate to understand contemporary man. Technology has made man homeless but thrown him together with his fellow-man. It points to "the inescapable experience of being—a-person as co-existence." Philosophy, as a unity of conceptual knowledge and intuitive ideas, seeks to explicate its insights concerning man: the open self, communication, the Absolute Person, the mystery of being-together, the dialogue, love, and the family as a personal community. Plattele also explores the mundane side of human intersubjectivity in politics, economics and law. This work combines sympathetic knowledge of modern European philosophy with religious devotion and humanistic values.

- The author argues that, although there is incontestably a plurality of philosophical systems, they do not share equality of worth or parity of truths. To establish and explain this position, he first submits that systems should be estimated only in terms of their categorically affirmative parts. He then contends that truth belongs not to systems but to propositions. Maintaining that systems are not merely schemes deduced from unitary principles but are instead episodic, the author proceeds to discuss the requirements of internal consistency and the notion of degrees of falsity.

- Many writers have alleged the existence of connections between political theory on the one hand and epistemology and theory of value on the other. Three main kinds of connections are discussed: logical, empirical (historical and psychological) and "relationships of congeniality." That the connections are logical, e.g., between absolutist ethics and totalitarian political beliefs, can not be true because the claims of the former are descriptive and those of the latter normative. That historical, contingent relations exist is disproved by historical fact. A vague sort of "congeniality" or analogy between the two sets of belief is insignificant.

- Its wisdom and sensitivity make *Personal Knowledge* required reading for epistemologists. By stressing the active components in scientific knowing—appraisal and commitment—Polanyi shows that knowledge is less "objective," more complex, and more widely distributed in nature than is tacitly supposed by most epistemologies. Knowing implies a foundation in skills, a confidence in one's ability to judge beyond the range of well-formulated rules, and a commitment to the existence of an answer to one's questions before the answer is in sight. Like a Platonic dialogue, this book conveys more than it states, and the broad foundation of insight embodied in the examples would support more conceptual superstructure than Polanyi provides.

- This work represents the culmination of Polanyi's thinking concerning the concept of meaning. Polanyi argues that science itself, being based on personal knowledge, represents but one example of the derivation of meaning from human imagination

and creativity. Meaning can be found in other manifestations of the human imagination as well. These include art, social interaction, mythology and religion. Polanyi argues for the possibility of a religious consciousness, for the development of the concept of mutual authority, and for a free society based on mutual autonomy and moving toward richer and fuller meanings.

POLLARD, William G. *Chance And Providence, God's Action In A World Governed By Scientific Law.* NY Scribner 1958.

The theme developed is that the Biblical idea of providence can be reconciled with the view of the world as presented by contemporary science, especially quantum mechanics. Present-day science pictures the universe as one of chance and accident, whereas in most situations any one of a large number of alternatives may occur. Why one rather than another happens, science does not know. The Biblical doctrine of divine providence asserts that God determines the particular occurrence; and He does this without disrupting the "probability pattern of events" disclosed by science. Thus, chance and accident on the one hand and divine providence on the other are simply "two images of the same reality."

POLLITT, J. J. *The Ancient View Of Greek Art: Criticism, History, And Terminology.* New Haven Yale Univ Pr 1974.

This book is a study of the extant sources on what the Greeks thought about their own art, especially painting, sculpture and architecture. The author reconstructs and assesses the ancient terminology and theories of art criticism by coping with three crucial problems: (i) to clarify the issues imbedded in modern attitudes toward Greek art; (ii) to sort the extant testimonia and identify the distinctive types of writings on art; and (iii) to note the changes in meaning of basic concepts and relate such fluctuations to the historical context of specific styles and techniques. Ancient writers on art are classified into four groups, each standing for a separate tradition: professional, philosophical, literary or rhetorical, and popular. These traditions and their Roman variants are discussed in depth in part one. Part two concentrates on writers on art history in antiquity. The periods covered range from the eighth century BC to about the fourth century AD, with special attention to the Classical and Hellenistic ages.

POLLOCK, John L. *Knowledge And Justification.* Princeton NJ Princeton Univ Pr 1974.

Philosophers have generally held that the only way to analyze a concept is to state its truth conditions. In this book it is argued that attempts at such analyses in epistemology have almost invariably failed, and an alternative theory of conceptual analysis is proposed which proceeds in terms of justification conditions. After laying a theoretical foundation for this alternative scheme of analysis, it is applied to a number of traditional epistemological problems, including perception, knowledge of the past, induction, knowledge of other minds, and *a priori* knowledge.

POLLOCK, John L. Implication And Analyticity. *J Phil* 62,150-157 Mr 65.

This is an attempt to clarify the logical concepts of implication and analyticity. Implication is characterized in terms of the relation of *immediate implication*, where we say that P immediately implies Q if and only if the inference from P to Q is immediate, requiring no argument. Such immediate implications arise from our "semantical intuitions," with the help of which we directly perceive logical relations. Then several ways of defining analyticity in terms of implication are discussed, and it is shown that they are all equivalent. Finally, the relationship between implication and the relation, "Part of what it means to say that P is that Q," is discussed. In the light of the paradoxes of strict implication, it is argued that these two relations are not equivalent, but rather, that the latter relation is equivalent to *immediate* implication.

POLLOCK, Thomas C. *The Nature Of Literature: Its Relation To Science, Language And Human Experience.* Princeton NJ Princeton Univ Pr 1942.

Professor Pollock develops a theory of literature with deliberate neglect of aesthetics, on the ground that aesthetics "is dependent upon, and of a higher order of abstraction than, the theories of the individual arts, including literature. Literary theory is grist for the mill of esthetics."

POLS, Edward. *The Recognition Of Reason.* Carbondale S Illinois Univ Pr 1963.

Will that old phoenix metaphysics rise from the ashes of antimetaphysical positivism and existentialism? For the author of this book, the question is no longer whether metaphysical philosophies will be produced, but only what form they will take. There is a human need for an interpretation of the whole order of things. Reason's powers induce acts of radical origination and reflexivity. Hence the title of the volume. The author argues that the alternative of basing philosophy either on experience alone or on reason alone is bankrupt. The position developed professes to transcend both traditional empiricism as well as rationalism. Reason, it is argued, contributes to the structure and order of things. To study this ordering force one should proceed to study both the structure of the world and the hierarchical structure of reason. The metaphor dominating this inquiry is that of the myth of Theseus. Reason is "a thread that will guide us through a labyrinth of... difficulties."

PONCELET, Albert. The Christian Philosophy Of Maurice Blondel. *Int Phil Quart* 5,564-593 D 65.

The paradox is brought out of Blondel's philosophy's claim to be at once a true philosophy respecting the autonomy of human reason in investigating the problem of human destiny with full objectivity, without being prejudiced ahead of time by the Christian answer, and at the same time its openness to the Christian answer as one that must necessarily be considered by reason itself. This was quite contrary to the rationalistic temper of the university philosophical world in Blondel's time and awakened strong resistance. His claim that action itself is an essential ingredient for the clarification of thought and the revelation of truth was also contrary to and ahead of the spirit of his time. The author shows how the combination of intellectual rigor with openness and respect for the role of action go hand in hand throughout this unique type of philosophy.

POPKIN, Richard H. Ethical Naturalism And Hedonics. *J Phil* 48,518-523 Ag 51.

The author maintains ethical naturalism is in actuality two theories: (1) a scientific thesis, a science such as hedonics can be developed, (2) a philosophical thesis which considers value statements as equivalent in meaning to statements in hedonics. This distinction is established to show that the adequacy of certain scientific conclusions is irrelevant to the discussion of the validity of ethical naturalism.

POPKIN, Richard H. Randall's *Career Of Philosophy*: Three Reviews: I. *J Phil* 63,709-719 N 66.

The first two of J H Randall's projected three volumes on *The Career of Philosophy* are examined from the point of view of the historian of science. The triumphant emergence of science and technology differentiates modern Western civilization from all others. Has this new power served worthy or unworthy ends? Some investigators of nature have sought only to enjoy the spectacle of what they discovered; others have insisted on deriving material benefits from their researches. Both groups have poured forth an unending flood of new ideas and speculations, which have fructified the traditional fields of philosophy proper. These have produced an abundant harvest, which in turn has enriched the surging stream. The resulting interaction has made a substantial contribution to the flowering of modern thought from Copernicus to Darwin.

POPKIN, Richard H. So, Hume Did Read Berkeley. *J Phil* 61,773-778 D 64.

A recently discovered letter of David Hume to Michael Ramsay, seems to settle the question I raised earlier whether Hume actually did read Berkeley. This letter, written shortly after the completion of the *Treatise*, mentions Malebranche, Berkeley, Bayle, and Descartes as authors to be read in order to understand "the metaphysical Parts of my Reasoning." The letter also indicates that the Chevalier Andrew Michael Ramsay played a major role in Hume's intellectual career at the time. This document will be of great significance in evaluating Hume's place in the history of philosophy, in establishing the actual historical context from which his views arose, and in assessing the extent of Berkeley's influence in this context.

POPKIN, Richard H. The Development Of The Philosophical Reputation Of Joseph Glanvill. *J Hist Ideas* 15,305-311 Ap 54.

POPKIN, Richard H. The High Road To Pyrrhonism. *Amer Phil Quart* 2,18-32 Ja 65. A survey of sceptical thought in the latter half of the 17th century, and an attempt to characterize its major features. After the appearance of Descartes' philosophy, the sceptical attack was redirected against Cartesianism rather than against Aristotelianism and various Renaissance theories. Gassendi, Sorbière, Foucher, and Huet used many traditional sceptical arguments about epistemology to bring about the downfall of Cartesianism. Pierre Bayle generalized the sceptical attack to undermine all types of theories in science, theology, metaphysics, etc. The paper attempts to bring out the unique features of Bayle's critical scepticism and of his fideism, to show how different his attacks and his conclusions were from those of previous sceptics, and to indicate that Hume, alone, of the major Enlightenment figures, seems to have felt the impact of Bayle's total scepticism and of his completely irrational fideism.

POTTER, Karl H. *Presuppositions Of India's Philosophies*. Englewood Cliffs NJ Prentice-Hall 1963.

The book argues that Indian philosophy is richly relevant not merely to the interests of orientalist but to basic philosophical problems, whenever and wherever these arise. It concludes with a list of ten specific points where India can contribute to considerations currently occupying philosophers in the West.

POTTER, Karl H. A Query To Mr Goodman. *Phil Stud* 8,81-85 1957.

The problem taken up in this article is one put forth earlier by Nelson Goodman: "The fact that every two qualia ('atoms') among a given group form a togetherness pair is not a sufficient guarantee that some one concretum contains them all." According to the author, Goodman's "answer" amounts to a revision which accommodates not only qualia but "sums" of qualia as well. The author, in addition, charges that the meaning of the word "sum" is not clear until an operation is specified, and that the only operation appropriate in Goodman's case is the thinking together of qualia in space and/or time—but since Goodman's qualia are not spatially or temporally located, it is difficult to know what the term means for him.

POTTER, Karl H. An Ontology Of Concrete Connectors. *J Phil* 58,57-64 F 61.

After pointing out that the distinction between abstract and concrete is not the same as that between universal and particular, the author proposes that the absolutely concrete is made up of connectors. This proposal, he contends, avoids the pitfalls of the extreme empiricist and the extreme rationalist theories. In support of his proposal, he considers the cases of causation in general and production in particular.

POTTER, Vincent G. "C S Peirce's Argument For God's Reality: A Pragmatist's View in *The Papin Festschrift*, Joseph Armenti (ed), 224-244. Villanova PA Villanova Univ Pr 1976.

Peirce does not have a single completed definition of Continuity which is implicit throughout his later writing. From about 1880 to 1911 he attempts several mathematically precise definitions. These attempts show a clear development marked by several significant changes of increasing sophistication. These changes might be conveniently located by reference to Peirce's stance with respect to George Cantor as follows: 1) Pre-Cantorian, until 1884; 2) Cantorian, 1884-1894; 3) Kantian, 1895-1908; 4) Post-Cantorian, 1908-1911.

- POUND, Roscoe.** *Contemporary Juristic Theory*. Claremont CA Claremont Coll 1940. These three lectures uphold the "long taught tradition" of the law as against the onslaughts of all forms of rampant absolutisms, especially that of the administrative disregard of fundamental legal principles. In the second lecture Pound reviews the antinomies in the theories of law which have led realists to abandon theories for administrative absolutes of the American realists, Marxian and other varieties. He considers conflicting claims, desires and demands, their classification, their legal recognition and the means for their attainment within the law.
- POUND, Roscoe.** *Introduction To The Philosophy Of Law*. New Haven Yale Univ Pr 1959.
- POUND, Roscoe.** *Justice According To Law*. New Haven Yale Univ Pr 1951.
- POUND, Roscoe.** *Law Finding Through Experience And Reason: Three Lectures*. Athens Univ Of Georgia Pr 1960. Dean Pound restates the essentials of his philosophy of law. He defines various senses of the term "law" and critically examines several leading theories of law, particularly the analytic, metaphysical, historical and realistic. In discussing the doctrine of fixed law, *stare decisis*, he contends in criticism that though law must be stable, it cannot stand still, but must be adjusted continuously to the changes in the society to which it applies; nor can one simply apply to legal questions methods of formal logic, deduction, and reasoning by analogy. Pound further attempts to distinguish his brand of pragmatic "sociological jurisprudence" from neo-realist jurisprudence: Knowledge of the facts is not enough, for one must take into account the social context of interests, demands, and needs. He argues that jurisprudence must relate law to the social sciences and that it should become a science of "social engineering."
- POUND, Roscoe.** *New Paths Of The Law*. Lincoln 1950.
- POUND, Roscoe.** *Social Control Through Law*. New Haven CT Yale Univ Pr 1942. This book is concerned with the important and inclusive issues in the philosophy of law, namely, the questions of the defining elements of law, the ends of law, and the search for an adequate measure of values. Two factors give this book its special flavor. The materials of contemporary continental writers, especially of those who have come to our shores in recent years, enter as an object of attention and as a partial influence upon Dean Pound's thoughts and expressions. The second factor which characterizes this book is the special concern Dean Pound here shows for distinguishing his own position from that of the realists in law.

- PRATT, Kenneth J.** Rome As Eternal. *J Hist Ideas* 26,25-44 Ja-Mr 65.

This article traces the periods in which the idea of the eternity of Rome has been most effectively used. From Imperial Rome to the Twentieth century, the concept of the eternity of Rome is seen as basically irrational, yet having vast symbolic importance. Despite its difficulties, Rome has seen itself as eternal, and has worked in both secular and ecclesiastical ways to fulfill this vision of itself.

- PRATTE, Richard.** *Contemporary Theories Of Education*. Scranton PA Interntl Textbook 1971.

The author provides helpful distinctions between various types of educational perspective, e.g., "progressivism" is analyzed as differentially a "life adjustment" philosophy or as "experimentalism." Similar distinctions are made for classicism between "essentialism" and "perennialism," and for educational radicalism which the author discusses under the specific themes of "reconstructionism" or social

radicalism and "existentialism" or personal radicalism. The book includes a novel assessment of "linguistic analysis" and "general semantics" as applied to educational theory. The thesis of the work is that educational theory, while drawing insight and data from other disciplines, is in fact an independent discipline in its own right.

- PRAZAK, Milos.** *Language And Logic*. NY Philosophical Lib 1963.

This book explains everything about the history of epistemology, ideas of God and of morality, the theory of relativity, all the different schools of logic, the main literary currents, a general survey of sociological thinking, and the main philosophical thoughts of today and their criticism, in a total of 144 pages of text. Many other topics are also discussed. As a consequence, every discussion is over-brief and superficial. The style is both vague and dogmatic. The title might just as easily have been "Science and Society," or perhaps "God and Soviet Linguistics."

- PRECOPE, John.** *Iatrophilosophers Of The Hellenic States*. NY Heinman 1962.

- PRELLER, Victor.** *Divine Science And The Science Of God*. Princeton NJ Princeton Univ Pr 1967.

The author examines the logical status of religious language in the light of recent developments in American analytic philosophy. The problems inherent within religious language are presented in relation to the referential status of the word "God." Preller argues that the significance of any referential terms is dependent upon the ability of that term to play a significant role within a unified conceptual system. To state the meaningfulness of religious language, Preller explicitly rejects the epistemological presuppositions of traditional empiricism. St Thomas' philosophical and theological treatises serve as a model for religious language in the book.

- PRESSON, Virginia.** G E Moore's Theory Of Sense-Data. *J Phil* 48,34-41 Ja 51.

Moore's definition of "sense-data" is explicated and several criticisms of it are presented by the author. She examines two assumptions in Moore's definition which seem to be incompatible with one another: (1) his doctrine of sense-data as the "real or ultimate" subjects of our perceptual judgements, (2) his "common sense principle."

- PREUS, Anthony.** *Science And Philosophy In Aristotle's Biological Works*. NY Olms 1975.

This book is an investigation of interpenetration of scientific and philosophical methods and goals in Aristotle's biological works. It includes a chapter on Aristotle's sources and methods, an investigation of the central argument in *Generation of Animals*, a discussion of the principles of understanding the organic parts and their variations, an examination of the use of the concept of necessity in the biological books, and of the use of the personalized concept of nature, particularly in the analogies drawn between art and nature. The book also includes an extensive bibliography and indices. In general, the author argues that Aristotle's direction and method is largely determined by his philosophical interests, but correlatively, the biological facts force some adjustments to earlier philosophical positions.

- PREUS, Anthony.** Aristotle On Biology As Philosophy. *Oneota Review* 1,5-11 1964.

This article argues that Aristotle's work in biology was motivated by philosophical interests; *Parts of Animals I* and several other methodological passages are discussed in this light.

- PREUS, Anthony.** Aristotle's *Parts Of Animals* 2: 16: 659b13-19: Is It Authentic? *Classical Quarterly* 18,170-178 N 68.

parts of Animals II 16, 659b13-19, is argued to be a later insertion in the text of Aristotle. The several points of view expressed in these few lines are in considerable discord with opinions stated elsewhere in Aristotle's works, and the passage does not fit well in the context. If the lines are inauthentic, this would clear the way for a more sensible theory of the development of Aristotle's notion of connate *pneuma*, since this is the only passage in *Parts of Animals* which uses this idea.

- PREUS, Anthony.** Aristotle's Three Theories Of The Soul. *Proc Creighton Club* 16-31 Spr 73.

Aristotle's hylomorphic, noetic, and pneumatic theories are presented and compared in terms of possible theories of Aristotle's philosophical development, and in terms of cognitive dissonance.

- PREUS, Anthony.** Science And Philosophy In Aristotle's *Generation Of Animals*. *J Hist Biology* 3,1-52 Spr 70.

Aristotle's concept of substantial or entitative change is crucial for his ontology. This study compares the scientific and metaphysical motifs in critical chapters of the article, presenting a new interpretation of Aristotle's theory of sexual generation, as well as contributing to the understanding of his development of philosophical biology. Modern scientific and philosophical concepts of reproduction are introduced to assist in the comprehension of the way in which Aristotle's theory was developed.

- PREVOTS, Claude.** On The Nature Of Legal Deliberation. *Monist* 49,424-442 Jl 65.

Edward H Levi is taken to be claiming in *An Introduction To Legal Reasoning* that decisions in law courts are determined by a process of comparing cases to generate and apply implicit rules, rather than determined by appeal to the meaning of pre-established, comprehensive rules of a legal system. He maintains the ambiguity of concepts in established rules of law makes such concepts, as against reasoning by appeal to example, ineffectual in controlling the result of legal deliberation. His

- argument is held to be insufficiently warranted. The nature of legal deliberation is explored with reference to reasoning by appeal to example, and it is argued that such an appeal may be seen as an attempt to establish that two cases or sets of cases are of the same legal type.
- PREYER, Robert O.** Julius Hare And Coleridgean Criticism. *J Aes Art Crit* 15,449-460 Je 57.
- PRIBRAM, Karl.** *Conflicting Patterns Of Thought*. Washington DC Public Affairs Pr 1949.
- This book is an ambitious attempt to connect in a condensed, outline form the four leading social philosophies of the present with what he believes to be their corresponding "patterns of thought." Dr Pribram is eager to get on with his defense of one of the four patterns, nominalism, as the sole source of light and leading in politics and economics. The other three, universalism, intuitionism, and dialectical reasoning, are "fruits of the same tree of logic," and lead to all manner of disasters. Nominalism alone rejects "the identity of thinking and being," and offers "no prospect of finding absolute verities"; with the result that "only nominalistic reasoning can provide methods of settling international conflicts by peaceful means."

- PRIOR, A N** and Ferrater Mora, José and Harris, Errol E. *The University Of Kansas Lectures: "The Idea Of Man," "Analysis And Insight," And "Changes In Events And Changes In Things"*. Lawrence Univ Of Kansas 1961.
- Ferrater Mora's paper is devoted to the thesis that man makes his own life—a person constituting himself historically. Harris's lecture is a two-pronged attack on contemporary analytic philosophy. One part of the argument attempts to show that the enterprise is self-refuting, based on an epistemology of naive positivistic empiricism which most of its present proponents have themselves rejected. The other part of the argument is ad hominem, showing the urgent necessity for a synthetic and constructive philosophy which will be able to develop a way of life and system of values capable of stemming the drift toward nuclear self-annihilation. Prior, starting with the MacTaggart-Broad time puzzle and digressing backward through St Augustine, offers an adverbial analysis of time and tenses, based on the theory that there are only things, not events, and that things are present tense, when they are.

- PRIOR, A N.** Limited Indeterminism. *Rev Metaph* 16,55-61 S 62.
- The author examines Jonathan Edwards' predestinarian argument that if an act of will could occur without a cause, then anything at all could likewise occur without having been caused; and that one cannot claim it is uniquely the nature of volitions to come uncaused into being, for nothing has any nature until it exists. He contends that the argument depends upon false metaphysical assumptions, and that by adopting an alternative view (namely, that the world consists not of events but of interacting things whose behavior is partly determined by their dispositions or capacities), one can allow for a limited indeterminism.

- PRIOR, A N.** Postulates For Tense-Logic. *Amer Phil Quart* 3,153-161 Ap 66.
- Sufficient texts show that for Aristotle the universal notion expresses the same real thing as the particular, though in a different way. His grounds for a universal so conceived are twofold. First, in every sensible thing there is a basic formal principle that, though individual, brings each instance into formal identity with all the other instances. Secondly, in human intellectual cognition there is an active principle that raises knowledge above the status of photographing or registering or cataloguing, and actualizes what was only potential in the real thing. In knowing sensible things universally, the human intellect is able to grasp the concrete thing as characterized by a formal nature, thereby knowing it in a way that holds equally for all other instances. Though patently incomplete, this conception of the universal is free from internal contradictions. It provides a framework for fruitful discussion, and remains a challenge.

- PRITCHARD, Stanford K.** Metaphysics And The Metaphysical Experience. *Int Phil Quart* 6,214-229 Je 66.
- The paper attempts to ground the legitimacy of metaphysics in man's inherent capacity to have the "metaphysical experience of Being." After a review of some of the ways metaphysics has been defined in the past, the thesis is advanced that because Being—"the most abstract of all concepts"—can be shown to be accessible to man's thought and discourse, this validates the activity of metaphysics—conceptualization at various levels of abstraction. The main body of the paper consist of a phenomenological description of how Being becomes accessible to man as an experience which arises out of dread, boredom, love, joy, "creatureliness," and other self-pervasive moods. The author draws on the work of Brossart, Maritain, and Heidegger to argue that such an intuition of Being goes beyond psychology and autobiography to become the source of sound philosophy and enriched experience.

- PROSCH, Harry.** *The Genesis Of Twentieth Century Philosophy: The Evolution Of Thought From Copernicus To The Present*. Garden City NY Doubleday 1964.
- The author states in his Preface that the main purpose of this book is to help the modern reader understand what issues contemporary philosophers are presently debating and why. In order to perform this service the author provides an account of

the background of modern Western thought by going as far back as the origins of the Copernican revolution, an intellectual event of primal significance and one that constitutes the great break with medieval mentality. The book is divided into four parts, each dealing with the following themes: (1) the advent of modern science, (2) the philosophical problems involved in the metaphysical and epistemological sense, (3) the philosophical problems in the moral and political setting, and (4) the shape that contemporary philosophy has taken. The last part concentrates on the schools of marxism, pragmatism, analytical philosophy and existentialism.

PROSCH, Harry and Polanyi, Michael. *Meaning*. Chicago Univ Of Chicago Pr 1975.

This work represents the culmination of Polanyi's thinking concerning the concept of meaning. Polanyi argues that science itself, being based on personal knowledge, represents but one example of the derivation of meaning from human imagination and creativity. Meaning can be found in other manifestations of the human imagination as well. These include art, social interaction, methodology and religion. Polanyi argues for the possibility of a religious consciousness, for the development of the concept of mutual authority, and for a free society based on mutual autonomy and moving toward richer and fuller meanings.

PROSCH, Harry. Limits To The Moral Claim In Civil Disobedience. *Ethics* 75,103-111 Ja 65.

Non-violent civil disobedience can be counted as a form of moral persuasion only under certain rigidly delimited circumstances which are unlikely to occur. Even in these circumstances it is likely to fail in its purpose of changing the mind of the person forced to walk over our bodies. Non-violent civil disobedience resorts to a kind of fighting for the right because pure persuasion has failed. The principle that it is morally right to fight for the right, however, must be rejected because it cannot serve as a common or universal principle of action.

PULIGANDLA, R. *Fundamentals Of Indian Philosophy*. Nashville Abingdon Pr 1975.

This text is a systematic introduction to the major systems, orthodox as well as heterodox. It is presented in such a way that an interested neophyte will have no problem in grasping the key issues. In an introductory chapter he criticizes Western parochialism as judging "the philosophies of others by standards and criteria of one's own culture." He asserts rather that the basic philosophical problems in Indian and European systems "are astoundingly similar." He demonstrates this in each of the chapters, starting out with the three major heterodox schools: Cārvākaism, Jainism, and Buddhism. He then develops the orthodox systems, generally covering their epistemology, metaphysics, and theology where applicable. In the remaining two chapters he deals with "Time and History in the Indian Tradition" and "A Glimpse at the Contemporary Scene."

PULOS, C E. *The Deep Truth: A Study Of Shelley's Scepticism*. Lincoln 1954.

Although "perhaps no major English poet's philosophy is so elusive as Shelley's," the author contends that the poet's "hitherto neglected scepticism" forms "the logical center of his thought, the point where his empiricism terminates and his idealism begins." After a survey of the sceptical tradition, this study explores the influence of Hume and Sir William Drummond (not Berkeley) in bringing about Shelley's rejection of commonsense materialism, and in "presenting Plato in a new light." The central conflict in his philosophy was "between his empiricism and his platonism," and "read in the light of the sceptical tradition," his thought "reveals itself as remarkably consistent and coherent."

PUNZO, Vincent C. *Reflective Naturalism*. NY Macmillan 1969.

PURCELL, George R. Karl Marx The Philosopher. *Little Flower Magazine* 49,22-24 Je-Jl 68.

This article attempts to show the basic philosophical composition of Marxism, and, in at least one respect, the weakness of Marx as a philosopher and theoretician. The central theme explains and criticizes Marx's philosophy of change as a universal, absolute principle, pointing out in conclusion the difference between his position and a view held by traditional philosophers.

PURTILL, R L. Hartshorne's Modal Proof. *J Phil* 63,397-408 Jl 66.

This paper restates and criticizes the modal version of the Ontological Argument given by Charles Hartshorne in *The Logic of Perfection*. I show that the argument is valid in modal systems as strong as Lewis' S5 and that it is not subject to some familiar refutations of the ontological argument. I argue that, nevertheless, the ontological argument does not prove what it sets out to, and that the value of Hartshorne's modal version of the argument is that it enables us to state with some precision why this is so.

PURTILL, R L. Moore's Modal Argument. *Amer Phil Quart* 3,236-243 Jl 66.

An argument against a sceptical view of Russell given by G E Moore in "Four Forms of Scepticism" contains some premises which involve the idea of being possibly mistaken. I analyze this argument in terms first of modal logic and then of probability theory. I argue that on either interpretation Moore's general line of attack is effective against the sceptical view, and particularly against the "argument from error" which can be stated as "You have sometimes been mistaken about x, so it is possible you are now mistaken about x."

PURTILL, Richard L. *Reason To Believe*. Grand Rapids MI Eerdmans 1974.

Professor Purtill's book defends a conservative "evangelical" understanding of the Christian faith. *Reason To Believe* is a highly readable volume. It is primarily an elementary discussion of the understanding of philosophical problems inherent within the traditional and orthodox Christian Faith. Professor Purtill is anxious in his volume not to permit so-called "liberal" interpretations of Christianity to take the place of serious philosophical wrestling with the traditional problems posed by the Christian faith, for example, the nature of faith, God, the universe, revelation, life after death, etc.

PURTILL, Richard L. Proofs Of Miracles And Miracles As Proofs. *Christian Scholar's Review* 6 1976.

As against Hume's view that "a miracle can never be proved so as to be the foundation of a system of religion" I argue that the possibility of miracles can be defended on philosophical grounds, that there is historical evidence for the occurrence of certain miracles and that such miracles can in fact give grounds for the preference of one system of religious belief over another.

PURTILL, Richard L. The Intelligibility Of Disembodied Survival. *Christian Scholar's Review* 5 1975.

I consider some recent arguments against disembodied survival by D Z Phillips, Antony Flew and Terence Penelhum. I argue that Penelhum's arguments are stronger than those of Flew or Phillips but ultimately fail to establish their point; we can produce reasonable criteria for the identity of disembodied persons and attempts to reject such criteria rest on a question-begging preference for a bodily continuity criterion.

PUTNAM, Hilary. *Philosophy Of Logic*. NY Harper & Row 1971.

This monograph raises the nominalist-realist issue in connection with the question of the indispensability of quantification over abstract entities such as sets. It is argued that quantification is necessary for science and that acceptance of quantification commits us to acceptance of the existence of the mathematical entities involved. Nominalism is rejected as in principle inadequate to the language of physics; and other objections to the indispensability argument, such as linguistic purism, conventionalism, and fictionalism, are disposed of in turn.

PUTNAM, Hilary and Ullian, J S. More About 'About'. *J Phil* 62,305-310 Je 65.

In an earlier note, published in *Mind*, a question raised by Nelson Goodman was answered: it was shown that if a statement S is absolutely about k, the negation of S must be also. The solution given, however, applied directly to only a special class of cases, and so was open to misunderstanding. Here the authors extend the earlier solution and then provide an alternative treatment which is felt to have independent interest.

PUTNAM, Hilary. Craig's Theorem. *J Phil* 62,251–259 My 65.

Reichenbach's "straight rule" for estimation says that when m of the n observed α are β , you should estimate the long run frequency of β among A as m/n . W C Salmon recently claimed to prove that this is the only sound rule for estimating on the basis of observed frequencies. But quite aside from difficulties connected with Goodman's riddles about "grue," the proof is defective. At least two more premises are needed to single out the straight rule as both sound and useful. No one has yet given a good reason for believing either of these premises, so Salmon's "vindication of induction" has not yet succeeded.

PUTNAM, Hilary. Decidability And Essential Undecidability. *J Sym Log* 22,39–54 Mr 57.

PUTNAM, Hilary. It Ain't Necessarily So. *J Phil* 59,658–670 O 62.

This paper argues for the following conclusions: The distinction between statements necessary relative to a body of knowledge and statements contingent relative to a body of knowledge is an important methodological distinction. The traditional philosophical distinction between statements necessary in some eternal sense and statements contingent in some eternal sense is not workable. Rescuing moves, which consist in saying that if a statement which appears to be necessary relative to a body of knowledge at one time is not necessary to a body of knowledge at a later time, then (a) it was not the same statement or (b) it was only mistaken to be a necessary statement, are unsuccessful.

PUTNAM, Hilary. Robots: Machines Or Artificially Created Life? *J Phil* 61,668–690 N 64.

Is it possible for a robot to be conscious? If so, what are the necessary and sufficient conditions? Why should we care? By discussing the minds of machines Putnam seeks a new way of approaching traditional issues in the philosophy of mind. After reviewing a succession of failed attempts—attempts to show that we must say that robots are conscious, or that they are not, or that we cannot tell—Putnam concludes that the question of the title calls for a decision rather than a discovery. It seems preferable—because otherwise discriminatory on the basis of softness or hardness of body parts—to extend our concept so that robots are conscious.

PUTNAM, Hilary. Three-Valued Logic. *Phil Stud* 8,73–80 1957.

The article goes into various objections to a logic which employs the notion of a 'middle' truth-value, paying special attention to whether such a notion makes sense and whether such a three-valued logic has a use. In support of the latter point the author refers to the work of Reichenbach who demonstrates that adopting a three-valued logic permits one to preserve both the laws of quantum mechanics and the principle that no causal signal travels with infinite speed—a condition not possible if ordinary two-valued logic is used.

QADIR, C A. Contemporary Philosophy And Religion. *Int Phil Quart* 5,361–378 S 65.

The anti-religious tendency of contemporary philosophical thought is strengthened by the Logical Positivist criterion of meaningfulness, according to which the language of religion is nonsensical and absurd. In common with the Logical Positivists, Professor Braithwaite holds that, of all the three conditions by which the truth of a statement can be determined, religious discourse does not fulfill any. It is asserted, accordingly, that religious language is either anthropomorphic or it means nothing. The article subjects the criterion of meaningfulness to a searching analysis and exposes its hollowness. It is contended that all that the Logical Positivists can say, on the basis of the criterion, is that the Language of religion is neither tautologous nor descriptive, but the further conclusion that it is meaningless is, to use legal terminology, excessive. It is also argued that the dilemma posed above can be "escaped." The meaningfulness of the religious language can be discovered in the context of analogy, obedience, and encounter.

QUAN, Stanislaus. The Solution Of The Achilles Paradox. *Rev Metaph* 16,473–485 Mr 63.

The author argues that although Zeno's argument from his data is irrefutable there is concealed in the wording of his paradox a set of conditions which render it impossible for Achilles to win the race. The crucial facts are that Zeno separates the runners at the start and that Achilles' time is made relative to the distance covered by the tortoise in the first movement of the discontinuous race. The author then demonstrates that Achilles would overtake the tortoise if his movement were continuous. He also argues that Aristotle understood why Zeno's paradox could not be refuted mathematically.

QUAY, Paul M. Contraception And Conjugal Love. *Theological Studies* 22,18–40 1961.

This article seeks to show the moral evil of contraception through personalist rethinking of natural-law ethics. The relations between human psychology and a "natural law" are studied. This leads to a phenomenological analysis of human sexual activity in its relations to the total person and to others. Sexual activity is seen as the natural language of love; and the basic principle of sexual morality is formulated: One may neither use this language to say what is false, nor corrupt the language itself so that it says truly what is unreal or inhuman. This principle is applied to the matter of contraception, and various difficulties are considered.

QUAY, Paul M. Morality By Calculation Of Values. *Theology Digest* 23,347–364 1975.

Serious flaws inhere in moral arguments which substitute "value" and "disvalue" for "good" and "evil." When "value" is used in any of its usual senses, certain key elements in any moral situation must be neglected since they cannot be wholly reduced to any complex of values whatever. If, instead, "value" is taken as identical to "good" in meaning, then the central arguments concerning the "moral calculus," based on a summation of values, are erroneous. Finally, unfortunate consequences are shown to flow from either approach and especially from a sliding back and forth between them.

QUAY, Paul M. Statistical Physics. *New Catholic Encyclopedia* 13,664a–669b 1967.

The various problems to which statistical mechanics address itself are discussed, as well as its methods, its achievements, and its relations to other branches of physics—with an eye upon philosophical as well as physical understanding. Its limitations, also, are indicated, with particular focus upon the problems connected with ergodicity, irreversibility, and the existence of a genuinely statistical thermodynamics.

QUINE, W V. Identity, Ostension, And Hypostasis. *J Phil* 47,621–632 O 50.

The problem of identity is discussed through an analysis of ostension of spatio-temporally extended objects. The author begins by explicating this system and then shows how it differs from the ostension of irreducible universals, such as "square" and "triangle." The author concludes by explaining that detachment from one's conceptual scheme is not possible, but the scheme can be changed "plank by plank" to correspond with a pragmatic standard.

QUINE, W V. Ontological Reduction And The World Of Numbers. *J Phil* 61,209–215 Mr 64.

Reduction of one predicate to another is satisfactory if the two are coextensive. But this standard is unsuited to an ontological reduction, where the aim is to dispense with the putative values of the original predicate. Since coextensiveness is not the issue, what is? Some have concluded that isomorphism is all that matters, but a little analysis reveals that modelling does not assure reducibility. Three conditions are formulated, constituting a standard of what is to count as a reduction of one theory, or ontology, to another, and this standard is applied to certain familiar cases of ontological reduction.

QUINE, W V. Russell's Ontological Development. *J Phil* 63,657–667 N 66.

In 1903 Russell held that every word referred to a thing or a concept. Only things existed; still, concepts had being. In 1905 he invoked contextual definition to make do with a narrower realm of being. In 1908 he used contextual definition to "reduce" classes to "propositional functions" or attributes. Perhaps he did this because of feeling that classes, if there were any, would claim existence, while attributes claim only being. Another factor was confusion of attributes with open sentences. By 1914 he stopped distinguishing between existents and other beings. Attributes and relations now exist. Propositions, as other than sentences, are repudiated by 1918, but facts are accepted, which could as well be called true propositions. In 1914 he slotted bodies themselves for reduction, to sense data. The plan he sketched was improved and partly executed by Carnap in 1928, but is hopeless. Subsequently Russell has tended more toward naturalism.

QUINE, Willard V. *Theory Of Deduction, Parts I–IV.* Cambridge Harvard Coop Soc 1948.

QUINE, Willard Van Orman. *From A Logical Point Of View: 9 Logico-Philosophical Essays.* Cambridge Harvard Univ Pr 1953.

Most of these logico-philosophical essays deal with semantics and related areas, and have been rewritten from articles in seven different journals. Among them is "New Foundations for Mathematical Logic," which first appeared in 1937, and to which some supplementary remarks have been added. A bibliography is included for reference.

QUINE, Willard Van Orman. *Mathematical Logic.* Cambridge Harvard Univ Pr 1951.

Professor Quine's new book is a comprehensive presentation of mathematical logic which leads the reader in a very systematic manner from quite elementary to the most advanced topics, including the important results which have been obtained in recent years. The book is one of the most authoritative standard works on mathematical logic now available; in particular, it embodies the progress both in content and in method which has been made in mathematical logic since the publication of the older standard work, *Principia Mathematica*—a progress to which the author himself has very actively contributed.

QUINE, Willard Van Orman. *Methods Of Logic.* NY Holt 1950.

QUINE, Willard Van Orman. *Philosophy Of Logic.* Englewood Cliffs NJ Prentice-Hall 1970.

This book offers a survey of the central topics in the philosophy of logic. There are chapters on "Meaning and Truth," "Grammar," "Truth," "Logical Truth," "The Scope of Logic," "Deviant Logics," and "The Ground of Logical Truth." Some of the topics discussed are the status and elimination of propositions, Tarski's definition of truth and the notion of satisfaction, the relation of logic to set theory, and the question of the viability of alternative logics.

QUINE, Willard Van Orman. *Set Theory And Its Logic.* Cambridge Harvard Univ Pr 1963.

This book is an introduction to set theory. By leaning heavily on modern logic, Quine develops a substantial amount of set theory axiomatically without either being naive about the antinomies or prejudicing the issue of infinite classes. This development felicitously allows Quine a neutral ground on which, in his concluding chapters, to describe, compare and connect various conflicting full-blooded systems: Russell's theory of types, Zermelo's system, two of Quine's own, and von Neumann's. This treatment of set theory, allowing formalism without sectionalism, is singular and should instruct and delight the theorist as well as the beginning reader.

QUINE, Willard Van Orman. *The Roots Of Reference.* La Salle IL Open Court 1973.

QUINE, Willard Van Orman. *Word And Object.* Cambridge MA 1960.

This is Quine's most ambitious semantical undertaking in which concessions to the material object language accompany a stimulus-behavioral account of verbal meaning. He further shores up favorite theses of the past, including difficulties in the way of synonymy claims and the advantages for scientific communication of formalizing ordinary discourse.

QUINTON, Anthony. The Soul. *J Phil* 59,393–409 JI 62.

This is an argument for the constructability of an empirical concept of the soul, which, like Locke's, interprets the soul as a sequence of mental states logically distinct from the body and is neutral with regard to the problem of the subject. The soul is defined

as a series of mental states connected by continuity of character and memory. The objection that a memory criterion presupposes a bodily criterion is considered. Arguments for it are judged forceful but not conclusive. Finally, the paper deals with the complex question whether a soul can exist in an entirely disembodied state.

RABIL JR, Albert. *Merleau-Ponty: Existentialist Of The Social World.* NY Columbia Univ Pr 1967.

A detailed, critical examination of Merleau-Ponty's philosophy and its background in European science, philosophy and politics. The clarity of Rabil's style make it possible for him to compress much material into a short book. For Merleau-Ponty, the intelligibility of the physical order depends on a perceptive world in which structure is given to an observer, but in which structure belongs neither to the observer nor to the thing observed; it belongs rather to the world in which both are related. In the understanding of this interworld between man and the world lies the key to the understanding of the social and existential phenomenology in which Merleau-Ponty attempts to avoid both the errors of intellectualism and the errors of empiricism. Rabil often makes illuminating comparisons between Merleau-Ponty's ideas and those of other philosophers such as Hegel, Marx, Bergson, Husserl, Marcel and Sartre. The various criticisms which have been advanced against Merleau-Ponty by Alquié, de Waelels, Moreau, Kaelin, Strasser, Ballard, and Kwant are also discussed with care.

RADER, Melvin Miller. *Ethics And Society: An Appraisal Of Social Ideals.* NY Holt 1950.

Part One of this book surveys formalistic ethics, rejecting the doctrine that right action is mere obedience to laws, whether conceived as laws of society, God, nature, a *priori* reason, or intuition. Part Two examines teleological ethics, maintaining that the moral task is to achieve the maximum good through the cultivation and harmonious integration of interests. Relativism, hedonism, voluntarism, etc., are measured against this standard. Part Three considers social ideals as means to the cultivation and fulfillment of interests. Aristocracy, democracy, liberalism, fascism, and socialism are evaluated.

RADER, Melvin. "Shelley's Theory Of Evil" in *Shelley: A Collection Of Critical Essays*, George M Ridenour (ed). Englewood Cliffs NJ Prentice-Hall 1965.

This book is an answer to the prevailing view that Shelley in *Prometheus Unbound* and other mature works thought of evil as superficial and temporary. Influenced by Plato and Spinoza, Shelley distinguished between two types of evil, one kind, objective and ineradicable, the other kind, subjective but deep-rooted. The latter can be escaped by minds freed of hatred and superstition, minds that conceive existence *sub specie aeternitatis*; but this escape will require a very profound transformation in human nature.

RADER, Melvin and Jessup, Bertram. *Art And Human Values.* Englewood Cliffs NJ Prentice-Hall 1976.

In Part One a general theory of value is defined and aesthetic theory is examined from this viewpoint. The characterization of aesthetic value as a gestalt avoids a onesided emphasis on *form* and *quality* (the objective component) or *feeling* (the subjective component). The *gestalt* consists of the two components and their interlocking relation. The authors then explore the aesthetic value in common life, fine art, and nature. Part Two discusses art in relation to religion, morals, history, science, economic activity, freedom, and urban and regional planning. The book is thus a far-ranging examination of art and aesthetic value in their various and broad connections with the condition of man. It is a critique of culture from an aesthetic perspective.

RADER, Melvin. Community In Time Of Stress. *Univ Of Colorado Studies* 83–98 Ag 61.

This article is a study of John Dewey's concept of "community." According to Dewey, the term refers to a process rather than a locality. Its roots are personal rather than abstract and impersonal. It is based on free mutuality rather than like-mindedness, and it excludes exploitation or one-sided domination. It is perpetually in the making, and the individual's commitment to it is not simply retrospective but dynamic and

forward-looking. The function of the state should be mainly to integrate and augment the various techniques of free associations. Science and technology should be reoriented and increasingly directed toward the cultivation of intimate groups and free, cooperative individuals.

RADER, Melvin. Crisis And The Spirit Of Community. *Proc Amer Phil Ass* 27,40-58 N 1954.

RADER, Melvin. Isolationist And Contextualist Esthetics: Conflict And Resolution. *J Phil* 44,393-406 JI 47.

Isolationist esthetics insists that art is separate from the rest of life; contextualist esthetics asserts the integrality of life and art. To illustrate this conflict the author discusses art from a threefold standpoint: the work of art, the artist, and the public. The conflict in principle can be resolved if art can be shown to involve a fusion of the isolated and the contextual. This fusion occurs when artistic expression is the creation of a specific variant of a generic value. The specificity satisfies the requirement of isolationism, the generality satisfies contextualism.

RADER, Melvin. Polarity And Progress. *J Phil* 42,673-683 D 45.

We should not exaggerate the value of dialectical synthesis. Imitation, maturation, adaptation, and cooperation may involve little conflict-resolution and yet be extremely valuable. The human mind has a tendency to think in terms of dyadic relations, but the most valuable syntheses often depend upon triadic or even more complex relationships. No single rule can be applied in choosing among various ways of resolving conflicts.

RADER, Melvin. Science And World Community. *Scientific Monthly* 62,500-510 Je 46.

Apart from technological applications, science contributes in two essential respects to a cooperative social order. In content, the field, the organic totality, the space-time configuration, the ecological community have been increasingly emphasized. In method, science consists of "the community of interpretation"—a correlation and comparison of social perceptions and judgments. But specialization tends to counteract the communalizing effect. To supply the needed synthesis we must rely not upon a single great interpreter but a community of interpreters.

RADER, Melvin. Technology And Community: The Mandates Of Survival. *Scientific Monthly* 66,502-513 Je 48.

A discussion of the relation of modern technology to both the small primary community and the great society. Technology has undermined the former and imperilled the latter, and it has created staggering power for either good or ill. If for good, we must preserve and revitalize the small, intimate community, in which men and women learn the ways of human fellowship, and we must create the great community of all peoples, which will find institutional expression in a peaceful world order. We must strive to rectify the disequilibrium that results from the relative underdevelopment of the humanities and social sciences in comparison with the immense development of the physical technologies and the natural sciences.

RADER, Melvin. The Artist As Outsider. *J Aes Art Crit* 16,306-318 Mr 58.

In our technological civilization, the artist tends to be an "outsider"—one who feels estranged from society. This tendency is heightened by the growth of vast bureaucratized collectives, such as big business, big labor, and big government. Art, being the sphere of spontaneity and creativity, has suffered greatly from bureaucracy and mechanical rationalization. The main basis of living for the artist, as for the ordinary citizen, should be neither isolated individualism nor anonymous collectivity, but the meeting between man and man, each giving and receiving from a center of inwardness.

RADER, Melvin. The Conflict Of Fascist And Democratic Ideals. *Antioch Rev* 3,246-261 Je 43.

RADER, Melvin. The Root Values Of Art. *J Phil* 38,324-331 Je 41.

The greater proportion of the world's art can be analysed into main types corresponding to certain universal ("root") values. Among such values are the perfection of abstract form, the delight in activity, the interest in knowledge, the enjoyment of fitness, the exhilaration of conflict, and the love of harmony. From these roots have evolved different types of art: abstract, empathic, realistic, functionalist, dialectical, and formalist. The greatest art reconciles opposed values—time and eternity, activity and repose, conflict and harmony.

RADER, Melvin. Toward A Definition Of Cultural Crisis. *Kenyon Review* 9,262-278 Spr 47.

"Cultural" in the title is used to denote the activities of a society in its entire range. A cultural crisis is a dynamic state of disequilibrium, in which wants are frustrated, resources are unused or misused, and potentialities are fettered by the disproportionate development of cultural factors. Two sorts of uneven development are especially critical: overdevelopment of the privileged at the expense of the underprivileged, and overdevelopment of certain traits at the expense of others.

RADFORD, Robert. Aristotle On Doing Evil. *J Thought* 19-22 Ap 66.

RADHAKRISHNAN, Sarvepalli. *Recovery Of Faith*. NY Harper 1955.

The author maintains that the current need for "a spiritual reawakening" as the basis for achieving and maintaining a world community can be satisfied only by belief in a practice of "the eternal religion" here described. Such a religion, while not identical with any of the major historic faiths, nevertheless is implicit in all attempts in the various religions to achieve mystical experience of "a Transcendent Supreme." Several alternatives to this "eternal religion" are critically examined and found wanting at the same time that its necessity and feasibility, as a kind of world "ecumenical movement" among the faiths of mankind, are defended.

RADHAKRISHNAN, S and Santayana, George and Dewey, John. On Philosophical Synthesis. *Phil East West* 1,3-5 Ap 51.

RADIN, Max. *Law As Logic And Experience*. New Haven Yale Univ Pr 1940.

Professor Radin accepts Mr Holmes' view and thus the book presents an empiric approach to law. According to his own words in the preface, the author intends to strike a middle course between conceptualism and realism. He expresses his agreement with William Occam with reference to the nature of our concepts and this way seems to admit tacitly the truth of the criticism that has been made against Llewellyn, viz. that his realism in fact is a renewal of nominalism.

RAFF, Charles. Introspection And Incorrigibility. *Phil Phenomenol Res* 27,69-73 S 66.

In his recent article, "Is Introspection Incorrigible," D M Armstrong presents versions of four current arguments designed to show that a person's introspective knowledge of his current mental state is not incorrigible. Each argument is shown to be unsound. To evaluate Armstrong's arguments, three different technical senses of "incorrigible" are distinguished. One of Armstrong's arguments is an attempt to show that, if introspection is incorrigible, then it is meaningless to speak of awareness of one's own current mental state. In this argument Armstrong employs a "contrast principle" of meaningfulness which has the unwanted consequence that many sentences which express necessary truths turn out to be meaningless. In another of his arguments, Armstrong appeals to an ontological principle: if individuals *a* and *b* are non-identical, then it is possible that *a* exists and *b* does not exist. This principle is shown to be unacceptable.

RAIFFA, Howard and Keeney, Ralph L. *Decisions With Multiple Objectives: Preferences And Value Tradeoffs*. NY Wiley 1976.

This book is an attempt to develop a science for multiple objective decision making. The authors show how the decision maker can systematically resolve choices between uncommensurable objectives. They illustrate the theory by many concrete examples taken from a host of disciplines. They give special attention to the value or preference aspects involved in decision analysis. The book is divided into four main categories: (1) the structuring of multi-objective problems, (2) the theory (based on the utility theory of von Neuman-Morgenstern) of quantifying preferences over multiple objectives, (3) the application of that theory, and (4) special topics, an examination of preferences over time and of aggregation of individual preferences.

RAIFFA, Howard and Luce, R Duncan. *Games And Decisions: Introduction And Critical Survey*. NY Wiley 1957.

This book emphasizes the central ideas and results of game and decision theory "unencumbered by their technical mathematical details," and omits most proofs and solutions of specific games, but does make use of considerable abstract notation and mathematical language. It surveys most of the diverse results in the field, with special attention throughout to "the major intuitive and empirical objections" to the application of these theories to problems in the social science field. The first twelve chapters deal with two-person and many-person game theory, chapter thirteen takes up decision making when outcomes are uncertain rather than merely risky, and the last chapter treats of group decision making.

RAINICH, G Y. A Formal System. *Notre Dame J Form Log* 1,123-126 1960.

RAITZ, Keith L. The Performance Element In Ryle's Concept Of Understanding. *Proc 1974 Oh Val Phil Educ Soc* 93-101 1974.

Some confusion exists concerning the performance element in Gilbert Ryle's concept of understanding, quite possibly because of the tendency to refer to Ryle's analysis as the performance account of understanding, which, strictly speaking, it clearly is not. The notion of competent performance does play a prominent role in his account, and because it does, Ryle's remarks about performance are all too often mistaken for the whole of his explication. This essay is an attempt to put the notion of performance in its proper perspective by examining three critical attacks, each of which centers around the performative element in Ryle's concept of understanding.

RAJU, P (ed) and Radhakrishnan, S (ed). *The Concept Of Man: A Study In Comparative Philosophy*. Lincoln NE Johnsen 1960.

RAJU, P T And Others (eds). *Comparative Studies In Philosophy*. NY Harper 1951.

The book contains twenty-one chapters written by scholars on comparative philosophy to be presented in honour of S Radhakrishnan, one of the world's leading thinkers and an ex-President of India.

RAJU, P T And Others (eds). *The Great Asian Religions*. NY Macmillan 1962.

This book is an anthology of religious literatures: the Indian by P T Raju the Chinese by W T Chan, the Islamic by I R al Faruqi, and the Japanese by J M Kitagawa.

RAJU, P T. *Idealistic Thought Of India*. Cambridge Harvard Univ Pr 1953.

This is a thick book of 456 pages. It deals with the development of Buddhist and Vedāntic idealism and their comparisons in the light of western idealism as a

- philosophy of reality and value. It shows that for idealism reality is transcendental and is the same as value. For its law, reality, existence, self, and value are, on ultimate analysis, the same, and for a true philosophy which is to be a guide to man's life, have to be the same. In spite of the great controversies between Buddhism and the Vedānta, the drive of the thought of both is towards the same goal. It is the first work that articulates the structure of Buddhist and Vedāntic thought. It is reviewed as a great book. It is available in German translation also (Maisenheim am Glen, Verlag Anton Hain, 1969).
- RAJU, P. T.** *Introduction To Comparative Philosophy*. Lincoln 1962.
This book is the first to be explicitly on comparative philosophy. It appeared also in Dutch translation (Aula Boeken, Antwerp and Utrecht). It takes the three traditions—western (including the Jewish, and the Greek), Chinese, and Indian—as wholes, attempts to present their conceptual structures in their growth and formations, and shows how important they are to one another as complementaries. Its importance lies in showing that man's orientations are to the material world, the biological and social world, and the inward world of spirit. Unfortunately, present-day philosophers who give equal importance to all the three are considered to be old-fashioned and an unbalance is developing in the life's outlook in the world, East and West.
- RAJU, P. T.** "Indian Epistemology And The World And The Individual" in *The Status Of The Individual In East And West*, C. A. Moore (ed). Honolulu Univ Of Hawaii Pr 1968.
The real significance of the Indian epistemological doctrines has not been appreciated by the Western philosophers; most important of all, the importance of the doctrine of illusion for the Indian thinkers has been missed. The full scope of the Indian epistemology goes far beyond what is called logic and epistemology in the West. This paper tries to bring out that the full scope and the status of the individual has to be grasped with reference to the whole, which does not of course mean that the individual has no status of his own. If the philosophy of language is part of epistemology, then it also has wider scope than the so-called empirical analysis of sentences and word-meanings. The chapter was written with all this in view.
- RAJU, P. T.** "Metaphysical Theories Of Indian Philosophy" in *Essays In East West Philosophy*, C. A. Moore (ed). Honolulu Univ Of Hawaii Pr 1951.
This is a bird's eye view of all the religio-metaphysical theories of India presented in a skeletal form from the early beginnings to the present. It will be useful as a first reading for the absolute beginner. It removes the impression wrongly held in many quarters that Indian philosophy is mere *Schwärmerei*, or mere religious thought based on mere intuition. There is an academical side to the whole development. But we should also guard ourselves against treating metaphysics as the weaving of mere intellectual theories without stable moorings.
- RAJU, P. T.** "Religion And Spiritual Values In Indian Thought" in *Philosophy And Culture: East And West*, C. A. Moore (ed). Honolulu Univ Of Hawaii Pr 1962.
This chapter discusses the nature of Indian religion and the Indian meaning of spiritual as distinct from those of the West. It shows how Indian religious thought developed from early polytheism to the absolute monism of Sankara. It explains the chief problems of God-realization, the problem of evil, the Bhagavadgītā philosophy of action, relation between religion and spiritual values, the place of ethical codes in the social and religious life of India, and the relation of the spiritual and aesthetic values. It is meant to give a general picture of the relation of the religious, ethical, and social life of India.
- RAJU, P. T.** "Three Chapters" in *The Indian Mind*, C. A. Moore (ed). Honolulu Univ Of Hawaii Pr 1967.
The three chapters concerned are "Metaphysical Theories in Indian Philosophy," "Religion and Spiritual Values in Indian Thought," and "Extracts from 'Indian Epistemology and the World and the Individual'" read at the 1949, 1959, and 1964 sessions of the East-West Philosophers Conference.
- RAJU, P. T.** Activism And Spiritual Communion. *Main Currents* 17,75–83 Mr–Ap 61.
- RAJU, P. T.** Actuality. *J Phil* 55,661–672 Jl 58.
The paper discusses the meanings of actuality, existence and contingency, their similarities and differences with reference to the four categorical classifications given by Kant. It also has bearings to some contemporary views.
- RAJU, P. T.** Being, Existence, Reality, And Truth. *Phil Phenomenol Res* 17,291–315 Mr 57.
This was considered to be an important paper which attempted to clarify the meanings of the four words which are still being used confusingly in both the same and different senses. Their meanings coincide, but also differ; that is, there is overlapping both in meaning and usage. Incidentally, the paper brings in also the Indian meanings and usages, which also have similar difficulties. In their usage the ontological, the cosmological, the epistemological and logical, and even the artistic (imitative art) meanings are mixed up. The intent is to raise the question: To what or to which are all these meanings moored or to be moored? In a way, but only in a way, this paper anticipates my papers on Being.
- RAJU, P. T.** Coherence And The Moral Criterion. *Ethics* 50,206–218 Ja 40.
- RAJU, P. T.** Comparative Philosophy And Spiritual Values: East And West. *Phil East West* 13,211–226 O 63.
- RAJU, P. T.** Critical Humanism: An Indian Viewpoint. *Personalist* 32,259–269 Sum–Jl 51.
- RAJU, P. T.** Existence, Finite Or Infinite. *Phil East West* 12,241–250 O 62.
This is a review article of Professor F. J. von Rintelen's work, *Philosophie der Endlichkeit* published in English under the title *Beyond Existentialism* by George Allen and Unwin Ltd, London 1961. The original German edition was published in the same year by Verlag Anton Hain, Meisenheim. The mistake of existentialists like Heidegger is that they regard Being generally as finite, because it is known as within *Dasein*. But is not the mountain known as very small when it is reflected in a mirror? *Sein* may be known only as reflected in *Dasein*, but yet can be infinite. One may say that *Dasein* is a particularised and limited state of *Sein*, which, as beyond any individual, must be infinite. What is the implication of Kant's view that existence can never be a predicate?
- RAJU, P. T.** Existence: An Epistemological Study. *Phil Phenomenol Res* 12,265–277 D 51.
This paper discusses the relation to the subjective, the objective, reality, and truth, and also to validity. It shows that existence, is concerned with epistemology—i.e., in answer to the question, how one comes to know of existence at all, comes to know how anything exists at all—has to be self-conscious (i.e., of the form of I-am). Why does not man think that the objects he sees, even the real objects, are not merely ideas entertained by him, suspended before his mind? This paper will be of interest to those thinkers who seek an answer to the question. Other questions in philosophy are of derivative importance, if they are philosophical questions at all.
- RAJU, P. T.** Feigl On Intuition. *Phil East West* 8,149–164 O 58–Ja 59.
- RAJU, P. T.** Idealisms: Eastern And Western. *Phil East West* 5,211–234 O 55.
This is a comparison of western and eastern (including the Chinese) idealistic thought in its growth. It gives in a short space a summary of the similarities and differences.
- RAJU, P. T.** Indian Epistemology And The World And The Individual. *Phil East West* 14,311–332 O 64.
This paper is particularly important for its summary and supplement. The summary gives the different epistemological perspectives in India, and also warns against drawing conclusions about any world outlook from the structure of the language of the nation or culture, particularly when the people belonging to that culture have themselves developed many metaphysical views from the structure of their own language. The supplement warns that, besides the usual three meanings of truth—ultimate, empirical or pragmatic, and apparent—there is also another distinction between truth as proven *pramāṇya* and truth as bound to Being or Existence. So far as my knowledge goes, western scholars and almost all Indian writers have not noticed the importance of this distinction.
- RAJU, P. T.** Intuition As A Philosophical Method In India. *Phil East West* 2,187–207 O 52.
It is generally thought that Indian philosophers discussed philosophical topics by using intuition as a method of proof. The paper denies that the method was ever used as a method of criticism or construction or even proof. Yes, there is an intuitive basis for all reasoning and experience; but it does not mean that the intuitive method is ever used as a proof of the reality of anything. The Nyāya accepted it as a valid means of knowing imperceptible entities like atoms, a power given to the yogis; but it is disputed and denied by almost all the other schools. Even the Nyāya does not accept intuition in argument. (Even the so-called intuitions (guesses) of the primitives had to be substantiated pragmatically at the risk of life itself).
- RAJU, P. T.** The Concept Of The Spiritual In Indian Thought. *Phil East West* 4,195–214 O 54.
- RAJU, P. T.** The Development Of Indian Thought. *J Hist Ideas* 13,528–550 O 52.
This was the Woodward Lecture given at Yale University, February 8, 1950. It gives in a skeletal form the general development of Indian thought.
- RAJU, P. T.** The Educational Significance Of Indian And Comparative Philosophy. *Ball State Univ Forum* 12,69–75 1971.
This is the international Philosophy Lecture given at the Ball State University, on 17 October 1969. It shows that Indian and Comparative Philosophy has a significant place in the curriculum of American Education for broadening its outlook and for making it global, which the outlook of every nation ought to be.
- RAJU, P. T.** The Existential And Phenomenological Consciousness In The Philosophy Of Rāmānuja. *J Amer Orient Soc* 84,395–404 O–D 64.
Husserl did not make much use of the idea that there is what can be called existential consciousness, perhaps there is no such idea in his phenomenology. What is called phenomenological consciousness is concerned with the grasp and understanding of phenomena and has a definite, fixed structure, basically common to all the members of the species, and is relatively fixed and cosmic. Its structure can be explicated only with reference to the phenomena it grasps. These two forms of consciousness are explicitly demarcated by Rāmānuja, and the significance of the demarcation can be understood in the writings of some of his scholarly followers. Heidegger also is not right in thinking or at least indicating that the I in its entirety is phenomenological. It has deeper roots.
- RAJU, P. T.** The Logos And The Mahān ātmā. *Ohio J Relig Stud* 1,37–55 Jl 73.
This is a study of the idea of the Logos, as coming between the Supreme Being, Supreme Person, or the Absolute and man. This idea is necessary in philosophy as pure ontology even if it attempts to establish right relation between *Sein* and *Dasein*, in any of its forms (Heidegger, Jaspers, Marcel, Sartre etc) as shown in my address at the Vienna International Congress, "Man, Logos, and Philosophy." All religious thought, Christian, Greek, Zoroastrian, Islamic, and Indian—as shown in this paper—was obliged to accept the idea of the Logos in terms of intellect, power, love, language, and God-realization. So far as my knowledge goes, Chinese thought—except perhaps in Chinese Buddhism—does not seem to have given much thought to the idea.
- RAJU, P. T.** The Nature Of The Individual. *Rev Metaph* 17,33–48 S 63.
The individual is the true particular, and he cannot be classed under any universal. And it is the true I or I-consciousness, or I-am. I cannot apply I-am to anybody except myself. It is the most irrefutable experience. Although Plato and Aristotle distinguished between the particular and the individual, the distinction slowly lost its significance in recent and contemporary philosophy so much so that the individual has become merely a value of the universal justifying Heidegger's remark that the modern man is only a *das Man*. And there is no point in criticizing eastern thought that it gives no importance to the individual so long as the distinction between the particular and the individual is not regarded as important.

RAJU, P. T. The Reality Of Negation. *Phil Rev* 50,585–601 N 41.

The paper discusses the relation between negation and reality, in what sense negation is part of reality and is real. It discusses the significance of all the related concepts in both western and Indian philosophy. If reality is positive, *something that is*, then negation itself must in some way and in some aspect be positive. What can it be?

RAJU, P. T. The Western And The Indian Philosophical Traditions. *Phil Rev* 56,127–155 Mr 47.

This was the first important paper published by me on comparative philosophy in USA. In a way, it was the forerunner of my book, *Introduction to Comparative Philosophy* (University of Nebraska Press, 1962). For a quick bird's eye view of the two traditions, it will be very useful. It will be useful particularly for those who cannot find time enough to read my thicker books on comparative philosophy.

RAJU, R. T. The Structure Of The I-Consciousness. *Phil Today* 8,219–227 Wint 64.

RALEIGH, Henry P. More On The Creation Of Art. *J Aes Art Crit* 25,159–166 Wint 66.

RALEY, Harold C. Jose Ortega y Gasset: *Philosopher Of European Unity*. University AL Univ Of Alabama Pr 1971.

Although Ortega never left a systematic treatment on the unification of Europe, his ideas on the subject can be found, primarily, in his famous *The Revolt of the Masses*. H C Raley has correlated these thoughts and placed them in the appropriate context of Ortega's (1) theory of human life, both individual and collective, (2) interpretation of the origin and evolution of European nations from prenational feudalism through the present bankruptcy of nationalistic structures, and (3) Spanish "circumstance" which brought the problem to his attention.

RAMSEY, Paul (ed). *Faith And Ethics, The Theology Of H Richard Niebuhr*. NY Harper 1957.

This work contains critical essays on the theology of H Richard Niebuhr. Hans W Frei traces the relation of Niebuhr's thought to leading nineteenth century thinkers and movements, especially idealism, historicism, and existentialism. Frei also presents the chief concerns of Niebuhr, including cultural relativism, value theory, theology, and Christology. James Gustafson critically reviews Niebuhr's contributions to Christian ethics and social policy.

RAMSEY, Paul. *Basic Christian Ethics*. NY Scribner 1950.

RAMSEY, Paul. *Fabricated Man: The Ethics Of Genetic Control*. New Haven Yale Univ Pr 1970.

RAMSEY, Paul. *Nine Modern Moralists*. Englewood Cliffs NJ Prentice-Hall 1962. "Christ transforming the Natural Law" is the principle explaining the fulfillment of the ethics of natural law. Critical examination of Dostoevski shows that there is no human freedom apart from the limits set by God, no forgiving of man's guilt save by Christ's suffering; of Marx, that the religious immanentism of Marx requires a transcendent God; of Sartre, that "sex in being" is not mutual antagonism but "the lateral" communication of subjectivities"; of Tillich and Brunner, that the relation of divine love to justice is not identity or dualism but transformation; of Maritain and Cahn, that the natural law is not deduced or revealed but inherent in man's natural sense of injustice; and of the two Niebuhrs, that Christ transforms natural law and relativism.

RAMSEY, Paul. *War And The Christian Conscience: How Shall Modern War Be Conducted Justly*. Durham NC Duke Univ Pr 1961.

"How shall modern war be conducted justly?" Ramsey argues, from the position of "protestant ethics," that the modern form of "just war" is "counter-forces" as opposed to "counter-people" warfare, and examines the available weapons and political-military problems accordingly.

RAMSEY, Paul. The Idealistic View Of Moral Evil: Josiah Royce And Bernard Bosanquet. *Phil Phenomenol Res* 6,554–589 Je 46.

RAMSEY, Paul. The Theory Of Democracy: Idealistic Or Christian? *Ethics* 56,251–266 Jl 46.

RAMSEY, Paul. Two Concepts Of General Rules In Christian Ethics. *Ethics* 76,192–207 Ap 66.

This essay explores the implications of John Rawls' "Two Concepts of Rules" for the Christian ethics of love, attempting to decide the significance of the distinction between summary rules and rules of practice for a viable form of agapism. The author finds that the concept of practice rule implies that agents may not be at liberty

to choose the particular most loving act if that act is contrary to a general practice which most embodies love. But he also suggests that a kind of non-practice general rule is important, on the grounds that there are universal truths about what love requires.

RAMSEY, R Paul. *Deeds And Rules In Christian Ethics*. NY Scribner's 1967.

This is a notably expanded and revised version of a book which Ramsey first published (in Scotland) in 1965. Parts of the volume are papers which he has published in various journals, but these are worked into a continuing argument. The general thesis of the entire volume is that Christian ethics, whether based on *agape* or *koinonia*, ineluctably has certain rules or principles over and above the basic one, "do what love, or the Christian community, requires." Ramsey argues that this is so by examination of the "situation ethics" of J Fletcher, P Lehmann, and J A T Robinson, among others. He also makes considerable use of recent essays on ethics by W K Frankena and J Rawls in which problems and developments of various theological ethical systems are presented.

RAMSPERGER, A G. Absolute Truth, Relative Reality, And Meaningful Events. *J Phil* 48,29–33 Ja 51.

This article offers a clarification of terms in statements such as: "There are no absolute truths," "Truth is relative," and "There is no meaning in the events in the external world." The author holds truth and falsity are predicated primarily of meanings regarded as parts of the given character of natural occurrences, not primarily of sentences or propositions.

RAMSPERGER, A G. On Feigl's "Existential Hypotheses". *Phil Sci* 17,182–185 Ap 50.

RAMSPERGER, Albert G. Meaning Without Mind. *Phil Rev* 55,674–679 N 46.

RAMSPERGER, Albert G. Objects Perceived And Objects Known. *J Phil* 37,291–297 My 40.

RAMSTETTER, Philibert. Introduction To A Franciscan Spirituality. *Fran Stud* 2,326–367 D 42.

RANCURELLO, Antos C. *A Study Of Franz Brentano: His Psychological Standpoint And His Significance In The History Of Psychology*. NY Academic Pr 1968.

RAND, Ayn. *Capitalism: The Unknown Ideal*. NY 1966.

This collection of essays offers a moral justification of capitalism. Based on the Objectivist ethics presented in the author's *Atlas Shrugged* and *The Virtue Of Selfishness*, *Capitalism: The Unknown Ideal* argues that laissez-faire capitalism is the only moral social system, and that it is the only system geared to the requirements of human survival, and that its ruling principle is justice. Divided into two parts, "Theory and History" and "Current State," the book discusses such issues as: the moral basis of individual rights (including property rights); the concept of "the common good"; the roots of war; patents and copyrights; the property status of airwaves; the intellectual bankruptcy of Conservatism; the immorality and destructiveness of the mixed economy-welfare state.

RAND, Ayn. *For The New Intellectual: The Philosophy Of Ayn Rand*. NY Random House 1961.

This book is an anthology of philosophical passages from the author's novels (*We The Living*, *Anthem*, *The Fountainhead*, *Atlas Shrugged*), presenting the essentials of her philosophy, Objectivism. The excerpts are preceded by a long title essay on the role of philosophy in the history of Western culture.

RAND, Ayn. *The New Left: The Anti-Industrial Revolution*. NY 1971.

The thesis of this book is two-fold: that the New Left represents an assault on the Industrial Revolution with everything it stands for and presupposes: reason, freedom, individualism, capitalism, progress, and civilization; and that the New Left is not an innovation, but is the docile product and logical consequence of the mystic-altruist-collectivist mainstream of modern philosophy. Essays discuss the philosophical meaning and sources of: the student "rebellion"; the Woodstock "festival"; the APA's endorsement of political resolutions; the ecology crusade; and the disastrous state of contemporary education, from nursery school to university.

RAND, Ayn. *The Virtue Of Selfishness: A New Concept Of Egoism*. NY 1964.

This collection of essays presents the essentials of the Objectivist ethics—an objective morality of rational self-interest. In the opening essay the author derives a standard of moral value from the fact of man's nature as a living organism—specifically, from the fact that reason is man's basic means of survival; she offers an original analysis of the concept of value, derives cardinal values and virtues, and discusses the relationship between happiness and morality. Subsequent essays develop central moral and political implications of these fundamentals, including: the principles governing proper human relationships; the thesis that there are no conflicts of interest among rational men; a validation of individual rights and a discussion of the nature and purpose of government; and a demonstration of the immorality of ethical subjectivism, pragmatism, altruism and collectivism.

RAND, Ayn. An Untitled Letter. *Ayn Rand Lett* 2, no 9 29 Ja 73.

The thesis of this article is the immorality—the profound injustice—of the egalitarianism surfacing today in the name of "justice." Various manifestations of this movement are discussed, with special attention given to the doctrine as it appears in John Rawls's *A Theory Of Justice*. This theory, and the review of it by Marshall Cohen, are criticized at length.

RAND, Ayn. Art And Cognition. *Object* 10, no 4 Ap 71.

What kinds of objects may be properly classified as works of art? What are the valid forms of art—and why these? This essay derives the answers to these questions from the nature of man's cognitive apparatus and from the need which art fulfills in man's life. Literature, painting, sculpture, architecture, music and the performing arts are discussed; a new hypothesis on the nature of man's response to music is proposed and discussed at length. Non-objective approaches both to art and to its definition are rejected.

RAND, Ayn. Art And Moral Treason. *Object Newslett* 4, no 3 Mr 65.

This is an essay on the role of Romantic art in a human being's moral development, and the adverse effects on this development of the current cultural antipathy to Romanticism.

RAND, Ayn. Art And Sense Of Life. *Object* 5, no 3 Mr 66.

A companion-piece to the author's "Philosophy and Sense of Life," this article is a study of the role of the mind in art: a study of the fundamental value premises and the subconscious mechanism involved in artistic creation and response.

RAND, Ayn. Basic Principles Of Literature. *Object* 7, no 7 Jl 68.

This essay outlines an esthetics of literature, discussing the nature, purpose, and principles of literature's four main aspects: theme, plot, characterization, style.

RAND, Ayn. Causality Versus Duty. *Object* 9, no 7 Jl 70.

This article contrasts two fundamentally distinct approaches to morality: the ethics of duty and the ethics of causality. The concept of "duty" is rejected as incompatible with a rational morality. By contrast, the author develops an approach to morality which is neither deontological nor subjectivist.

RAND, Ayn. Collectivized "Rights". *Object Newslett* 2, no 6 Je 63.

A companion-piece to the author's "Man's Rights," this article refutes all claims to the existence of group "rights" apart from or other than the individual rights of the group's members. The right of "the self-determination of nations" applies only to societies that recognize and protect individual rights; it does not apply to dictatorships or to primitive tribal societies.

RAND, Ayn. Collectivized Ethics. *Object Newslett* 2, no 1 Ja 63.

This article states that the altruist ethics destroys the reality of an individual man's life, value and rights—in the minds of the altruists, permitting them to regard men as the means to grandiose social projects, on the premise of "human lives, no object."

RAND, Ayn. Doesn't Life Require Compromise? *Object Newslett* 1, no 7 Jl 62.

Distinguishing between compromise on moral principles and compromise on particulars implementing a mutually accepted basic principle, this article gives a negative answer to its title question, showing that there can be no compromise on moral principles.

RAND, Ayn. Government Financing In A Free Society. *Object Newslett* 3, no 2 F 64.

A fully free society, which bans the initiation of physical force, could not finance its government through a system of compulsory taxation. How such a government might be financed is the subject of this article.

RAND, Ayn. How Does One Lead A Rational Life In An Irrational Society? *Object Newslett* 1, no 4 Ap 62.

This is an essay on the importance of pronouncing moral judgment, and on principles for properly doing so.

RAND, Ayn. Kant Versus Sullivan. *Object* 9, no 3 Mr 70.

The Kantianism of Paul Feyerabend's "Science Without Experience" is contrasted with the implicit Aristotelianism of Helen Keller's teacher, Annie Sullivan, as dramatized in William Gibson's *The Miracle Worker*. Critically attacking Feyerabend's article, the author defends the essential role of sense-perception in the acquisition of human knowledge, from the formation of one's first concepts to the full development of science.

RAND, Ayn. Man's Rights. *Object Newslett* 2, no 4 Ap 63.

This essay defines the nature and moral basis of individual rights, including property rights. A "right" is a moral principle defining and sanctioning a man's freedom of action in a social context; rights are conditions of existence required by man's nature as a rational being for his proper survival. The essay establishes that all rights are political rights to action (and to keep the products of one's action), and that there are no "economic rights," i.e., rights to goods as such. The essay concludes that the only social system which protects individual rights is laissez-faire capitalism.

RAND, Ayn. Of Living Death. *Object* 7, no 9 S 68.

An analysis and critique of the Papal encyclical *Humanae Vitae*, and of the view of human nature on which it is based, this essay defends man's moral right to romantic love, sexual pleasure, contraception and abortion.

RAND, Ayn. Our Cultural Value-Deprivation. *Object* 5, no 4 Ap 66.

This article discusses the acute value-impoverishment of our culture—as evidenced in philosophy, politics and art—and its devastating psychological and social consequences.

RAND, Ayn. Patents And Copyrights. *Object Newslett* 3, no 5 My 64.

This article presents a moral justification of patents and copyrights, maintaining that they are the legal implementation of the base of all property rights: a man's right to the product of his mind. Principles which should govern the complex legal problem of determining time limits are laid down.

RAND, Ayn. Philosophical Detection. *Ayn Rand Lett* 3, no 9 28 Ja 74.

Written for philosophy students, this article is a guide to the study of philosophy. It proposes the method of a "philosophical detective," who looks for the causes and consequences of philosophical assertions, including popular philosophical "catch-phrases." The article maintains that many philosophical systems are actually systems of rationalization.

RAND, Ayn. Philosophy And Sense Of Life. *Object* 5, no 2 F 66.

A study of the role of philosophy in human life, this essay discusses the nature and formation of a person's "sense of life," and its relation to his conscious philosophical convictions, his actions, and his responses in the spheres of love and art.

RAND, Ayn. Philosophy: Who Needs It. *Ayn Rand Lett* 3, no 7 31 De 73.

This is an address, given to the graduating class at West Point, on the nature of philosophy and its role in human life. The author identifies the questions with which philosophy is concerned, discusses the pervasiveness of philosophy's influence, and establishes man's need of consciously defined, rational philosophical convictions.

RAND, Ayn. Racism. *Object Newslett* 2, no 9 S 63.

This article discusses the irrationality and immorality of racism, regarding it as "the lowest, most crudely primitive form of collectivism." It identifies the psychological source of racism in a quest for an unearned self-esteem, and discusses the manner in which racism is perpetuated by collectivism and statism. The antidote to racism is to be found in the philosophy of individualism and capitalism.

RAND, Ayn. Representation Without Authorization. *Ayn Rand Lett* 1, no 21 17 Jl 72.

This article outlines the theory of representative government, and discusses the manner in which it is being corrupted by the quota doctrine gradually spreading through our political system (e.g., in the choice of political convention delegates). The consequence of representation by biological quotas (e.g., ethnic minorities, women, etc.) is the destruction of representation by ideological choice.

RAND, Ayn. Requiem For Man. *Object* 6, no 7 Jl 67.

A critical analysis of the Papal encyclical "On the Development of Peoples," this article identifies the basic view or "sense of life" motivating the Church's attack on capitalism: its hatred for man's mind and for his happiness on earth.

RAND, Ayn. Selfishness Without A Self. *Ayn Rand Lett* 2, no 18 4 Je 73.

A companion-piece to the author's "The Missing Link," this article discusses the type of "anti-conceptual mentality" who roams free of particular groups—the "tribal lone wolf"—and leads a profoundly amoral existence. This type, mistakenly regarded as "selfish," is contrasted with the authentically—i.e., rationally—selfish human being.

RAND, Ayn. The "Conflicts" Of Men's Interests. *Object Newslett* 1, no 8 Ag 62.

This article upholds the principle that there are no conflicts of interest among rational men. It identifies four interrelated considerations which must be taken into account in determining one's actual interests.

RAND, Ayn. The Age Of Envy. *Object* 10, no 7 Jl 71.

The leitmotif of our age is a nameless emotion resembling envy. That emotion is: hatred of the good for being the good. This essay analyzes the nature of this emotion, then examines its many manifestations in our culture, including: the current wave of egalitarianism; the glorification of weakness; the ecological crusade; and Women's Lib. The causes of this emotion and its spread through a culture are traced—central here are those philosophers, such as Kant, whose entire system embodies this hatred.

RAND, Ayn. The Anatomy Of Compromise. *Object Newslett* 3, no 1 Ja 64.

This essay on the nature of principles and their operation in practice identifies the following three rules: (1) In any conflict between two men (or two groups) who hold the same basic principles, it is the more consistent one who wins. (5) In any collaboration between two men (or two groups) who hold different basic principles, it is the more evil or irrational one who wins. (3) When opposite basic principles are clearly and openly defined, it works to the advantage of the rational side; when they are not clearly defined, but are hidden or evaded, it works to the advantage of the irrational side.

RAND, Ayn. The Anti-Industrial Revolution. *Object* 10, no 1 Ja 71.

This essay examines the "ecology" movement, identifying its metaphysical-moral meaning and its underlying motivation. It upholds man's need of technology; it describes the misery and death that follow the abandonment of technological civilization, called for by the ecological crusade. That crusade's motivation, it is maintained, is hatred for man: for his means of survival, the mind, for his success and happiness on earth; the crusade's political goal is global dictatorship.

RAND, Ayn. The Argument From Intimidation. *Object Newslett* 3, no 7 Jl 64.

A prevalent logical fallacy, resembling but distinct from *Ad Hominem*, is identified and analyzed. Where *Ad Hominem* asserts that "Candidate X is immoral, therefore his argument is unsound," "Intimidation" asserts that "Only the immoral can fail to see that Candidate X's argument is unsound," i.e., an arbitrary moral condemnation of a position is used to intimidate possible supporters into rejection of the position. The psychological effect of the argument is discussed.

RAND, Ayn. The Chickens' Homecoming. *Object* 9, no 6 Je 70.

This article discusses the collapse of contemporary philosophy, as demonstrated by the debate and the passage of a political resolution at the APA Eastern Division's 1969 meeting. The leftist proponents of the resolution demanded the philosopher's commitment to the political slogans of the moment, while the conservative opponents claimed that politics is not philosophy's concern. It was, states the author, a battle of "the advocates of thought divorced from action versus the advocates of action divorced from thought." Both sides ignored philosophy's task to provide men with political theory.

RAND, Ayn. The Comprachicos. *Object* 9, no 8 Ag 70.

This essay is an indictment of the mind-destroying character of contemporary education, from the "Progressive" nursery school through the university. After identifying the nature of a child's cognitive development and needs, the essay discusses the practices typical of contemporary schools at each level and their crippling effect on the students' cognitive and moral development. The essay demonstrates that the anti-rational philosophies dominating today's education arrest the development of the students' conceptual faculty, making them unable to think or to cope with reality.

RAND, Ayn. The Cult Of Moral Grayness. *Object Newslett* 3, no 6 Je 64.

This article opposes the claim that in moral issues "there are no blacks and whites, there are only grays." The article demonstrates that the claim is self-contradictory, and that the claim's roots lie in ethical subjectivism and in the desire to escape from moral judgment.

RAND, Ayn. The Ethics Of Emergencies. *Object Newslett* 2, no 2 F 63.

Applying the fundamentals of the author's Objectivist ethics to the sphere of human relationships, this article defines moral principles governing non-sacrificial help to others, with special attention to emergency situations.

RAND, Ayn. The Metaphysical Versus The Man-Made. *Ayn Rand Lett* 2, no 12 12 Mr 73.

This essay is an analysis of the philosophical meaning of the famous quotation used by Alcoholics Anonymous: "God grant me the serenity to accept things I cannot change, courage to change things I can, and wisdom to know the difference." Special attention is given to identifying that difference.

RAND, Ayn. The Missing Link. *Ayn Rand Lett* 2, no 16 7 My 73.

This essay identifies and discusses the social manifestations of a prevalent type of self-arrested intellectual development: "the anti-conceptual mentality." It explains why this type favors tribal, collectivist societies, primitive and modern.

RAND, Ayn. The Nature Of Government. *Object Newslett* 2, no 12 D 63.

Based on the author's theory of individual rights, this essay identifies why men need a government, establishing its moral justification and delimiting its proper functions. Man's rights can be violated only by the use of physical force, and men require organized protection against such use. A government is the means of placing the retaliatory use of physical force under objective control, i.e., under objectively derived laws. Against both anarchism and statism, it is maintained that human survival requires such an institution for the protection of individual rights—and only for that purpose.

RAND, Ayn. The New Fascism: Rule By Consensus. *Object Newslett* 4, no 5 My 65. The thesis of this article is that the mixed-economy welfare state, with its politics of compromise and "consensus" and its pragmatist philosophical underpinning, is moving steadily towards a form of fascism.

RAND, Ayn. The Property Status Of Airwaves. *Object Newslett* 3, no 4 Ap 64.

This article advocates private ownership of the airwaves, as an implementation of the right to property. The proper means of assigning title is explained, and the violations of individual rights caused by "public" ownership are identified and discussed.

RAND, Ayn. The Psycho-epistemology Of Art. *Object Newslett* 4, no 4 Ap 65.

This is an essay on the nature of art and its role in human life. Art, it is maintained, is "a selective re-creation of reality according to an artist's metaphysical value-judgments." Man's profound need of art is shown to lie in the fact that his cognitive faculty is conceptual, i.e., that he acquires knowledge by means of abstractions, and needs the power to bring his widest metaphysical abstractions into his immediate, perceptual awareness. Art fulfills this need: by means of a selective re-creation, it concretizes man's fundamental view of himself and of existence.

RAND, Ayn. The Psychology Of "Psychologizing". *Object* 10, no 3 Mr 71.

This article examines—and rejects—the notion of substituting psychological explanation for moral judgment; it distinguishes the tasks of psychology and philosophy, it upholds the principle that a man's moral character must be judged on the basis of his actions and his conscious convictions—not on the basis of inferences about his subconscious. Various types of "psychologizing" are distinguished.

RAND, Ayn. The Question Of Scholarships. *Object* 5, no 6 Je 66.

Written from the standpoint of the author's advocacy of ethical egoism and laissez-faire capitalism, this article answers the questions: "Is it morally proper to accept scholarships, private or public?" and "Is it morally proper for an advocate of capitalism to accept a government research grant or a government job?" With certain qualifications, the author's answer to both questions is "Yes."

RAND, Ayn. The Roots Of War. *Object* 5, no 6 Je 66.

The roots of war are to be found not in capitalism—which thrives on peace and free trade—but in statism and its collectivist base. This thesis is argued both philosophically and historically.

RAND, Ayn. The Stimulus—and The Response. *Ayn Rand Lett* 1, no 8 17 Ja 72.

This essay is a critical dissection of B F Skinner's *Beyond Freedom and Dignity*, and of the reviewers' response to it.

RAND, Ayn. The Wreckage Of The Consensus. *Object* 6, no 4 Ap 67.

A companion-piece to the author's "The New Fascism: Rule by Consensus," this essay elaborates on the immoral and destructive character of the mixed-economy welfare state's politics of compromise and "consensus," giving special attention to the military draft and the war in Vietnam, both of which the author opposes.

RAND, Ayn. What Is Capitalism? *Object Newslett* 4, no 11 N 65.

An essay on the nature and moral basis of capitalism, this article demonstrates that laissez-faire capitalism is the only social system geared to the requirements of man's survival qua man, that its ruling principle is justice, and that its essential characteristic is the recognition of individual rights.

RAND, Ayn. What Is Romanticism? *Object* 8, no 5 My 69.

This essay presents a new theory of the nature of Romanticism in art, identifying its philosophical roots, and discusses the philosophical causes of the development and decline of Romantic literature.

RAND, Ayn. Who Is The Final Authority In Ethics? *Object Newslett* 4, no 2 F 65.

This article is a brief discussion of the nature of objectivity in ethics.

RAND, Calvin G. Two Meanings Of Historicism In The Writings Of Dilthey, Troeltsch, And Meinecke. *J Hist Ideas* 25,503-518 O-D 64.

RAND, E K. Cicero In The Courtroom Of St Thomas Aquinas. Milwaukee Marquette Univ Pr 1946.

RANDALL JR, J H. To Win Out, Must Humanists Embrace Sin: A Reply To E A Burt's "humanism And The Doctrine Of Sin. *Humanist* 6,20-27 Spr 46.

RANDALL JR, John Herman. *Aristotle*. NY Columbia Univ Pr 1960.

This book is an enthusiastic and not completely implausible attempt to interpret Aristotle as a "thoroughgoing behaviorist." He is, of course, a functional and contextual behaviorist, not a mechanistic behaviorist. For him, life is the power of living and knowing, the power of selective response to the world." Randall sees in Aristotle a disturbing and philosophically inexplicable tendency to "platonize" in the *Organon*, the *De Caelo*, Bk X of the *Ethics*, and so on. The physical treatises, the *Politics* and *Ethics*, the *Poetics* and *Rhetoric*, however, expose the "Aristotelian" side of Aristotle, since they deal with the powers of selective response and the variety of natural processes, as well as offering a method for achieving practical aims.

RANDALL JR, John Herman. *How Philosophy Uses Its Past*. NY Columbia Univ Pr 1963.

This book sees philosophizing as clarifying scientific, social and cultural beliefs. Ultimately philosophy is a social enterprise, serving critical and constructive functions; but only by using philosophy's past can we escape being slaves of its past. Since cultural changes exhibit recurrent patterns, to ignore the past is to be liable to commit past follies; but to identify philosophy with its history is to abandon philosophizing.

RANDALL JR, John Herman. *Nature And Historical Experience: Essays In Naturalism And In The Theory Of History*. NY Columbia Univ Pr 1958.

In this group of well-written essays Randall discusses explicitly the group of ideas which have been implicit in his earlier works in intellectual history. The first section, which deals with the philosophy of history, argues that particular things have particular histories, and that these histories belong to them on the basis of what they are taken to be and expected to become. The metaphysics of the second section is a pluralistic analysis of actual experience and its symbolic representation.

RANDALL JR, John Herman. *The Career Of Philosophy, Vol II: From The German Enlightenment To The Age Of Darwin*. NY Columbia Univ Pr 1965.

This volume continues the critical narrative of modern thought following the end of the English and French Enlightenments which were treated in Volume I as responses for cultural reconstruction made necessary by scientific ideas. The author unravels the growth of the German Enlightenment, beginning with Leibniz. Book Six treats (1) the problems of integrating French culture, from the vision of the revolution to the organization of the positivist tradition, and (2) the British problems from the Conservative compromise to the reconstruction of Utilitarian ethics.

RANDALL JR, John Herman. *The Career Of Philosophy: From The Middle Ages To The Enlightenment*. NY Columbia Univ Pr 1962.

The author treats the rise and development of modern philosophy from its medieval origins to the present times. Book One treats the heritage of modern thought, presented as three dominant late medieval philosophies of knowledge: Augustinian Platonism, Thomistic Aristotelianism, and the *via moderna* of William of Ockham. Book Two focuses on the coming of humanism and the revolution in values and intellectual methods. Included here is a treatment of the development of political philosophies supporting the emergence of secular states. Book Three tells of the assimilation of science within the interpretative frameworks of the seventeenth century rationalist and empiricist systems which are taken to be the first generalizations of the new science. Book Four offers a critical examination of the philosophic responses to the Newtonian achievement down to the British and French Enlightenments, treated here as the efforts to erect the science of man and society and as the applications of the "order of Nature" to rational religion and rational morality.

RANDALL JR, John Herman. *The Logic Of The Humanities*, By Ernst Cassirer. *Hist Theor* 2,66-73 1962.

RANDALL JR, John Herman and Kristeller, Paul O. The Study Of The Philosophies Of The Renaissance. *J Hist Ideas* 2,449-496 O 41.

RANDALL JR, John Herman. Development Of Scientific Method In The School Of Padua. *J Hist Ideas* 1,177-206 Ap 40.

RANDALL JR, John Herman. Idealistic Social Philosophy And Bernard Bosanquet. *Phil Phenomenal Res* 26,473-502 Je 66.

The thought of Green (as a critic of Utilitarianism), Bradley (with his socialized conception of freedom), and Bosanquet (with truth being found in the social whole) are explored. It is argued that generally, the moral ideal is self-realization, and that idealism stressed the relativity and development of morality. The article ends by elucidating Bosanquet's emphasis on—the application of psychology to state coercion or the general will, and the value of the state to its members.

RANDALL JR, John Herman. J S Mill And The Working-Out Of Empiricism. *J Hist Ideas* 26,59-88 Ja-Mr 65.

The author believes that John Stuart Mill's *System of Logic* is the classical statement of British empiricism, and as such needs to be reexamined. The author believes that it outlines the transition from an observational to an experimentalist conception of science, and he traces how the work's arguments proceed. According to the author, Mill's central problem here is the Problem of Induction; the difference in the way Mill views this problem emphasizes the ambiguity in his work. The author concludes that Mill sees that sciences of his day were not inductive, and moves on to think that science is deductive, wherein the hypothesis plays a major role.

RANDALL JR, John Herman. John Dewey, 1859-1952. *J Phil* 50,5-12 Ja 53.

RANDALL JR, John Herman. Josiah Royce And American Idealism. *J Phil* 63,57-83 F 66.

In the course of reviewing the major works of Royce, the author considers Royce's relation to F H Bradley, Peirce, James, Santayana, and various other American

idealists. Among topics discussed are: Royce's concept of the Infinite as ground for certainty, his proofs of the Absolute, his notion of loyalty and the Great Community, his views regarding the possibility of error, the moral problems of pessimism evil, and the theorem of meaning.

RANDALL JR, John Herman. *Metaphysics: Its Function, Consequences, And Criteria.* *J Phil* 43,401-411 JI 46.

RANDALL JR, John Hermann. George Santayana—Naturalizing The Imagination. *J Phil* 51,50-51 Ja 54.

RANDALL JR, John Herman. T H Green: The Development Of English Thought From J S Mill To F H Bradley. *J Hist Ideas* 27,217-244 Ap-Je 66.

This is an analysis of the relation of Green to Nineteenth Century thought. The author believes that Green stands for three ideas. First, he is the major Nineteenth century critic of utilitarianism. Second, he is the main critic of laissez-faire individualism. Third, he is the major critic of empiricism. Green believed that experience is identical with thought; the real world is the intelligible world. The human mind, in knowing, establishes relations with the Eternal Mind. The author concludes that Green is both a Platonist and an Augustinian, eliminating particulars, or feelings, from philosophical importance.

RANDALL JR, John Herman. Talking And Looking. *Proc Amer Phil Ass* 30,5-24 O 1957.

RANDALL JR, John Herman. The Art Of Language And The Linguistic Situation: A Naturalistic Analysis. *J Phil* 60,29-56 Ja 63.

Two major problems are considered here. The first concerns the relation between the instrument of language and what it does—between the formal and functional structures of that instrument. For, like any art, "linguaging" illustrates the general metaphysical relation between a mechanism and its behavior. The paper sets forth a functional realism. The second major problem concerns the relation between the instrument of language and the materials it works with, manipulates, and reorganizes in making sentences, its subject matter and the traits there exhibited.

RANDALL, John A. Corism: Applied To Specifying Operations Called Scientific. *Phil Sci* 13,215-222 JI 46.

RANDALL, John H. *The Making Of The Modern Mind: A Survey Of The Intellectual Background Of The Present Age.* Boston Houghton Mifflin 1940.

RANDALL, John Herman. *Plato: Dramatist Of The Life Of Reason.* NY Columbia Univ Pr 1970.

This commentary begins by declaring the story of Plato's life to be an "imaginative tribute to a genius." Our Plato is the author of the dialogues, dramatic works designed to provide the reader with occasions for seeing important truths. In them Socrates and other striking intellectual personalities become vehicles for self-knowledge. Plato portrays "the philosophic implications of the artistic attitude" rather than proclaiming a system of metaphysics or epistemology. For him, the art of living well requires insight and only the mathematical sciences can be formally taught. Plato's commitment to *theoria* excludes such unworthy ideals as personal immortality. On the whole, the tradition of Platonism contains only a portion of the rich suggestiveness of Plato's dramas of the rational life.

RANDALL, John Herman. *The Role Of Knowledge In Western Religion.* Boston Starr King Pr 1958.

The author distinguishes "Three main positions which have been held in the West on the place of knowledge and truth in the religious life": 1) Christianity involves a revelation of "truth" which is knowledge "like all other knowledge"; 2) "this special 'religious' knowledge is unlike all other knowledge in that it deals with a 'higher realm'—the realm of faith or the realm of values; and 3) "Religion is a way of acting and feeling, not a way of knowing; it is practical and aesthetic rather than cognitive. ... Religious beliefs are not literal knowledge, but 'symbols'." three chapters are devoted to discussions of the relations of Christianity to Greek philosophy, natural science and the romantic movement. In a final chapter, an epilogue, the conclusion is reached that: "Religious 'knowledge' is not mystic intuition, it is not the awareness of values, it is not the encounter with 'the Hold', it is not existential commitment of the will to believe. It is rather a technical skill, an art, a 'know-how'... , a way of celebrating, consecrating and clarifying..."

RANDALL, John. Substance As Process. *Rev Metaph* 10,580-601 Je 57.

RANKIN, Bayard. The History Of Probability And The Changing Concept Of The Individual. *J Hist Ideas* 27,483-504 O-D 66.

This article traces the history of the concept of probability. The author believes that although there are scattered references to probability in classical works, it did not develop as a scientific theory worthy of study until after the Renaissance. Classical concepts of fate, chance, and fortune are examined, particularly with regard to how they affected the individual. Modern mathematical concepts of chance are also examined. Both the classical concern with the individual and modern mathematical relationships to chance are seen as influencing contemporary notions of probability.

RANKIN, K W. Referential Identifiers. *Amer Phil Quart* 1,233-243 JI 64.

RANKIN, K W. Wittgenstein On Meaning, Understanding, And Intending. *Amer Phil Quart* 3,1-13 Ja 66.

Wittgenstein's deceptively simple question "How can one in a flash anticipate a whole usage?" gives rise to the following dilemma. *either* meaning, understanding, and intention consist, as he suggests, in the functional interdependence between activities which make up some way of life, or in some sort of inner source of

subsequent behavior, or the distinction between the mental and the physical is secondary to that between the agent's and the alien standpoint in a way which disposes of the inner-outer dichotomy. Some of the destructive arguments in this paper dispose of the first horn, others, with some of Wittgenstein's, of the second, and this seems to confine the field to the further promotion of the third.

RAPHAEL, David D. *Problems Of Political Philosophy.* NY Praeger 1970.

RAPOPORT, Anatol. *Fights, Games, And Debates.* Ann Arbor 1960.

Much of this book stems from the von Neumann-Morgenstern theory of games, which Rapoport modifies in an attempt to develop mathematical models of three kinds of conflict: fights, games, and debates. He hopes that a scientific understanding of conflicts may help turn dangerous fights (such as international hostilities) into games or even into debates. He also discusses the development of a "social physics" which holds that there are laws describing the behavior of a social aggregate, even if the behavior of the particles composing it is indeterminate.

RAPOPORT, Anatol. *Operational Philosophy; Integrating Knowledge And Action.* NY Harper 1953.

RAPOPORT, Anatol. *Science And The Goals Of Man: A Study In Semantic Orientation.* NY Harper 1950.

With a strong impress from the works of the late Alfred Korzybski, we get a rapid and lucid survey of semantic literature with a view to presenting the higher reaches of a non-Aristotelian approach to the problems of today. He shows how science has progressed beyond the metaphysical backgrounds of the organismic and mechanistic to this new approach in which the semantic map or framework for the resolution of problems is set in terms of the Non-Euclidean, Relativistic, Postulational, Non-Aristotelian analysis.

RAPOPORT, Anatol. *Strategy And Conscience.* NY Harper & Row 1964.

This book is an attack on the strategic mode of thinking in international diplomacy, a mode which focuses on the question of what strategy should be used to maximize international security. Strategic thinkers use a series of rational decision techniques derived from decision theory, probability theory, and game theory. Rapoport shows how each of these techniques depends for its validity on certain mathematical assumptions which do not hold in the area of international diplomacy. Strategic thinking is neither rational nor objective; it is biased, narrow, and immoral. Rapoport urges the substitution of moral thought for strategic thought. Moral thinking focuses on psychological and ethical considerations; it attempts to evaluate values and utilities, and asks of a strategy not how it affects the enemy but how it affects ourselves. In the last third of the book Rapoport argues that communists are not devils to be defeated at all costs, that both Soviet and American society have strengths and weaknesses, that the strengths are complementary, and that each could learn from the other.

RASMUSSEN, H Richard. How Far Can Science Reach? Main Currents 19,85-89 Mr-Apr 63.

RATHBUN, John W and Burwick, Fred. Paul Tillich And The Philosophy Of Schelling. *Int Phil Quart* 4,373-393 S 64.

Beginning with Tillich's early analyses of Schelling's religious-historical constructions and the roles of mysticism and symbolism in Schelling's philosophy, the authors feel that a "persistent parallel" to Schelling's philosophy "is apparent throughout Tillich's philosophical-theological development." In their judgment, Schelling's transcendental idealism provides a fundamentally accurate perspective for viewing "the general structure and intent of Tillich's theology." The 1956 Munich edition of Schelling's *Werke* and Tillich's *Systematic Theology* serve as the primary sources. After an initial discussion of how the "ecstatic reason" intuitively and symbolically presents the Absolute, the authors pursue cognate existential questions of man's freedom, estrangement, and non-being, ending with an analysis of how the two men use a dialectical method of correspondence to move from the mechanism of existence to historical vitalism based on the twin themes of redemption and grace.

- If we want to think of the structure of Leibniz's metaphysics in terms of its mathematical foundation, it may assist us if we try to set up a modern mathematical formalism to express some of the relations he seems to have had in mind. This paper is an attempt to clarify (1) the conception of space and time as *phenomena bene fundata*, (2) the definition of a monad, and (3) the range and meaning of the pre-established harmony. Leibniz's insistence on the metaphysical importance of mathematical speculation suggests that this confessedly anachronistic procedure may nevertheless shed some light on his thought.

- READ, Herbert Edward.** *Icon And Idea: The Function Of Art In The Development Of Human Consciousness*. Cambridge Harvard Univ Pr 1955.
- The book presents the thesis that the image–creating activity of the artist is

presupposed by the cognitive systems of the scientist and philosopher. The argument is given in the form of a history of the visual image in seven roughly chronological stages, from paleolithic vitalism to modern constructivism; the application to philosophy is rather suggested than carried out. This account of visual art as the primary mode of cognition should prove suggestive not only to aestheticians, but also to those interested in the theory of emotive meaning, the history of thought, and the problem of "beginning to know."

- REAGAN, Charles E.** *Ethics For Scientific Researchers*. Springfield IL Thomas 1971.
- This book is aimed at practicing scientists, engineers, physicians, students in science curricula, and philosophers interested in current normative problems resulting from scientific research and modern technology. It begins with an elementary introduction to ethics, including brief accounts of numerous normative theories and all of the major meta–ethical views. In the second part, 55 actual or imaginary cases of ethical problems in science are presented, along with a schema for case analysis. The cases are divided into three categories, problems arising within scientific research, scientist–as–employee problems, and large, public issues, such as nuclear energy and pollution. The third section contains an annotated bibliography of the literature between 1960 and 1970.

- RECK, Andrew J.** *Speculative Philosophy: A Study Of Its Nature, Types And Uses*. Albuquerque Univ Of New Mex Pr 1972.
- In this book between the first two chapters, on the types of speculative philosophy, and the last chapter, on its uses, there are separate chapters on Realism, Materialism, Idealism and Process Philosophy. These intervening chapters are a history of philosophy arranged in a topical instead of a chronological order. In the first two chapters, a number of philosophies of philosophy are summarized in an attempt to provide a justification for Reck's own fourfold classification. The last chapter is an attempt to defend speculative philosophy against its critics by pointing to its cognitive, religious, aesthetic, moral, social and psychological uses.

- RECK, Andrew J.** The Philosophy Of A O Lovejoy (1873–1962). *Rev Metaph* 17,257–285 D 63.
- The author argues that a coherent and closely reasoned philosophical position which he identifies as a temporalistic realism can be discerned in Lovejoy's works. In this expository essay, he first examines Lovejoy's temporalism, considered both as a method and as a metaphysics, and discusses Lovejoy's position in relation to currents of past and contemporary thought (pragmatism, Bergsonism, and relativity). He then considers the relationship between Lovejoy's temporalism and his critical realism, and examines his views on epistemological and psycho–physical dualism. Finally, the author discusses Lovejoy's method in intellectual history as the logical complement of his temporalistic realism.

- RECK, Andrew J.** The Philosophy Of John Elov Boodin (1869–1950). *Rev Metaph* 15,148–173 S 61.
- The author opens this survey of Boodin's thought with remarks on his conception of philosophy as a whole drawing upon all aspects of human experience. Then, centering on his categories of intelligence and concept of truth, he discusses Boodin's epistemology of pragmatic realism. The author then presents Boodin's theory of reality: his thesis that being is energy, his conception of consciousness, his notions of space and time, and his views on truth, beauty, and virtue. Finally, the author discusses Boodin's theory of the cosmos, focusing on his positions on evolution and creation, matter, mind, and God.

- REDWOOD, John.** *Reason, Ridicule, And Religion: The Age Of Enlightenment In England, 1660–1750*. Cambridge Harvard Univ Pr 1976.
- Redwood argues that the works of Newton, Boyle, Berkeley, Clarke, and Locke, represent more than the simple advance of philosophy of nature, but rather that they arose collectively out of a dialectical interaction between a witty skepticism and the received religious dogmas and institutions. Ten chapters deal with the following topics respectively: opinions of the nature and causes of atheism, the chroniclers of atheism, atheism as a political cause, theories of matter and the origin of the world, the origin of the earth, witches and apparitions, the persons of the Trinity, attacks on the established church, theories of the relation between reason and nature, and the significance of the minute philosophers. The material provides collectively an adequate documentation of Redwood's claim that the period was more an age of ridicule than one of reason.

- REESE, William L.** Peirce On Abstraction. *Rev Metaph* 14,704–713 Je 61.
- After noting the weaknesses of the doctrines of abstraction in Aristotle, Locke, Berkeley and Hume, and Kant, the author summarizes Peirce's position: Reality is constituted by singulars. But singular individuals are not accessible to consciousness; percepts are already abstractions from the world. As existential propositions, perceptual judgments are in turn abstractions from percepts. Finally, the deduction of universal from existential propositions requires class names or hypostatic abstraction. Arguing that this doctrine is both a result of metaphysical decision and a decisive factor in his metaphysics, the author then discusses Peirce's views on the ontological status of abstractions.

- REEVES, Joan Wynn.** *Body And Mind In Western Thought*. NY Penguin Books 1958.
- This book is divided into two parts: the first is concerned with the historical, social, religious and philosophical contexts in which different theories of the relation between body and mind have been formulated. The second part is made up of extracts from philosophers and psychologists: Hippocrates, Plato, St Thomas Aquinas, Descartes, Hume, Condillac, J S Mill, Wundt, William James, etc., each with a short introduction. The general theme of the book is that one cannot understand the changing concepts of body and mind and their relation to one another unless one considers them as the products of different climates of opinion.

- REGIS JR, Edward.** Literature By The Reader: The 'Affective' Theory Of Stanley Fish. *College English* 38,263–280 N 76.
- This article is a critical analysis and evaluation of the experiential method of literary interpretation and criticism as developed by its originator Stanley Fish. I argue that the theory must be rejected because of its internal ambiguities and inconsistencies, the numerous absurd consequences to which it leads, and the incorrect theory of meaning on which it is based. These and additional criticisms are illustrated at length.

- REICHENBACH, Bruce R.** *The Cosmological Argument: A Reassessment*. Springfield IL Thomas 1972.
- "The most interesting and exciting of the theistic arguments" is framed by Reichenbach in an attempt to present a true and valid version: an adaptation of St Thomas Aquinas' third 'way' of demonstrating the existence of God. Major topics in this study are: causation; principles of causation and sufficient reason; logical and real necessity; causation of the whole cosmos; non-dependency of cosmological on the ontological argument.

- REICHENBACH, Hans.** *Philosophy And Physics*. Berkeley Univ Of Calif Pr 1948.
- REICHENBACH, Hans.** *The Direction Of Time*, Maria Reichenbach (ed). Berkeley Univ Of Calif Pr 1956.
- This posthumous work represents a culmination of Reichenbach's interest in the problem of time, and incorporates much of his earlier thinking about probability, quantum mechanics, the theory of relativity, and causality. The first chapter is a brief history of the problem as seen by philosophers. Beginning with the reversible processes of classical physics, the author discusses various statistical definitions of entropy, and constructs lattices with convergent rows or columns as a model in his treatment of determinism. According to the editor, Reichenbach "was convinced that he had achieved a solution of the problem of the direction of time which answers all the questions that can reasonably be asked about it.
- REICHENBACH, Hans.** *The Rise Of Scientific Philosophy*. Berkeley Univ Of Calif Pr 1951.
- This is a psychological criticism of the older systems of philosophy and a non-technical presentation of the new philosophy based on modern science. The author traces the failures of the systems to psychological causes. Reichenbach aims to show how the modern philosopher no longer dictates so-called laws of reason to the scientist, but rather proceeds by analyzing scientific methods and results.

- REICHMANN, James B.** St Thomas, Capreolus, Cajetan And The Created Person (Part I). *New Scholas* 33,1–31 Ja 59.
The article first seeks to determine Aquinas' definitive teaching regarding the formal constitutive of the human supposit, and then to compare his view with the views of two of his most celebrated commentators, Capreolus and Cajetan. The article's basic finding is that Aquinas places the ultimate constitutive of human personhood in the act of being (esse). It further concluded that Capreolus' interpretation remains faithful to the position of Aquinas while that of Cajetan, for whom the ultimate constitutive of person consists in a substantial mode, does not accurately reflect the original teaching of Aquinas.
- REICHMANN, James B.** St Thomas, Capreolus, Cajetan, And The Created Person (Part II). *New Scholas* 33,202–230 Ap 59.
The article first seeks to determine Aquinas' definitive teaching regarding the formal constitutive of the human supposit, and then to compare his view with the views of two of his most celebrated commentators, Capreolus and Cajetan. The article's basic finding is that Aquinas places the ultimate constitutive of human personhood in the act of being (esse). - REILLY, Francis Eagan.** *Charles Peirce's Theory Of Scientific Method*. Bronx NY Fordham Univ Pr 1970.
This book contains 6 chapters: I Charles Sanders Peirce: Philosopher, Scientist, Writer; II The Scientist's Concern: Knowledge For Its Own Sake; III The Stages of the Method (i): Experience and Hypothesis; IV The Stages of the Method (ii): Deduction and Induction; V The Moderate Fallibilism of Science; VI Some Evaluations; and an Appendix on "The Beginning of Pragmatism and 'Pragmatism,'" extensive Notes, a Bibliography and an Index. The book attempts to relate Peirce's writings on the philosophy of science to his views on wider philosophical perspectives. Reilly tries to present Peirce as he himself wished to be understood, through a chronological examination of his writings on the nature of scientific method and on the nature of the universe in which such a method bears fruit. The discussion of Peirce's views on scientific method is non-formal. Reilly is particularly impressed by what he calls Peirce's "Greek insistence on the primacy of theoretical knowledge and his almost Teilhardian synthesis of evolutionary themes."

- REISCHAUER, August Karl.** *The Nature And Truth Of The Great Religions: Toward A Philosophy Of Religion*. Rutland VT Tuttle 1966.
A textbook to be used in courses in the history of the world's religion. The author looks at Christianity, Judaism and Islam as representative of the three major monotheistic faiths, and then at the major religions of India and East Asia, Hinduism, Buddhism, Confucianism, Taoism, and their modern counterparts. Reischauer writes from the point of view of a Christian philosopher of religion, but is never an apologist for the Christian faith; rather he attempts to use Western Christian philosophical formulations of religion to present to the western reader the essentials of the nonwestern, non-monotheistic faiths. He insists that there are a number of fundamental assumptions that all religions share.
- REISER, Oliver L.** *A New Earth And A New Humanity*. NY Creative Age Pr 1942.
Reiser spreads the outline of a complete cosmology and a new social order.
- REISER, Oliver L.** *Man's New Image Of Man: An Interpretation Of The Development Of American Philosophy From Puritanism To World Humanism*. Pittsburgh Boxwood Pr 1961.
This brief book examines the growth of American thought from Puritanism to "cosmic humanism." Cosmic humanism is an evolutionary cosmological philosophy which rejects authoritarian religion, accepts aspects of pantheism, and emphasizes an ethical humanism based on science and appropriate to the present needs for a world community. An Appendix contains correspondence between Reiser and Stuart Dodd.
- REISER, Oliver L.** *Scientific Humanism: Its Origins, Teachings And Social Program*. Girard KS Haldeman-Julius 1946.
- REISER, Oliver L.** *The Integration Of Human Knowledge: A Study Of The Formal Foundations And The Social Implications Of Unified Science*. Boston Sargent 1958.
Professor Reiser's "Scientific Humanism" sort of "philosophy-fiction" picture of the universe, woven out of concepts from an astounding variety of fields—semantics, logic, philosophy of mathematics, topology, cybernetics, relativity theory, social engineering, quantum mechanics, parapsychology, etc.
- REISER, Oliver L.** *The Promise Of Scientific Humanism Toward A Unification Of Scientific, Religious, Social And Economic Thought*. NY Piest 1940.
The remedy for the ills of the modern world is to be attained by the fusion of science, religion, and philosophy, acting coordinately in the interests of social progress. This broad formula is the faith of Reiser. The thesis of the volume is: "If the modern world is to survive and continue its progress in a problematical future, its established culture-patterns, or modes of belief and action, will have to be replaced by... a new culture-pattern," a human intellectual evolution subsumed under "three main historical periods of human development."
- REISER, Oliver L.** *The World Sensorium: A Social Embryology Of World Federation*. NY Avalon Pr 1946.
Until recently, it has appeared that political-economic planning and the development of ideological formulations belong to separate domains. The "Knowers" and the "Doers" are separated by the chasm of specialization and isolationism. But recent events have served to crystallize the conclusion that we need to unify the development of a philosophy of social reform with the ongoing political administration of society. The two relatively independent functions of social change must in fact merge and become one, if either is to be of any value and both are to survive in any form at all in a future world.

- REISER, Oliver Leslie.** *Nature, Man, And God: A Synthesis Of Pantheism And Scientific Humanism*. Pittsburgh Pittsburgh Univ Pr 1951.
Professor Reiser presents a pragmatic socialism for the economic and political spheres, a pantheism in religion in opposition to the theisms of traditional religions with an over-all scientific humanism, variously styled as "scientific mysticism" or a "creative semantics." He hails the view as a new synthesis out of which East-West and Stalinist-Capitalist tensions can be tempered by a new high level of planetary planning for a new civilization with a mid-ground of pantheistic, pragmatic socialism.

- REITER, Michael.** The Judicial Notion Of Freedom As Seen Through The Law Of Contract. *Monist* 49,475-484 J1 65.
- What is meant by saying that a person is not free to enter into a particular contract? In an effort to answer this question the author examines such legal concepts as a valid, void, voidable, illegal, and an unenforceable contract. In so doing he concludes that traditional analyses of freedom in terms of restraints upon one's behavior fail to account for legal prohibitions to contract, and hence, at least in this respect, are inadequate. Having established this, the author goes on to consider a more fruitful method for analyzing what is meant by a legal prohibition to contract and he concludes that we must differentiate purely legal relations from the physical and mental facts which call such relations into being. From this it becomes clear that it is not the physical and mental part of the relation that is voided when it is said that a person is not free to enter into such a contract, but instead it is the legal relationship that is declared void.
- REITH, Herman.** *An Introduction To Philosophical Psychology.* Englewood Cliffs NJ Prentice-Hall 1956.
- With the doctrines of Aristotle and Saint Thomas on the nature of the soul and of the activity of thought thoroughly assimilated, Father Reith develops a rigorous scholastic psychology. Beginning with a discussion of the soul as principle of life, he presses on into specific analyses of the special functions: vegetative, sensory, and rational. An extensive section is devoted to the nature of the human will and the attendant problem of habit; and a final part assures us of the spirituality and immortality of the soul. There are copious texts from Aquinas and a valuable glossary.

- REITMEISTER, Lewis Aaron.** *A Philosophy Of Time.* NY Citadel Pr 1962.
- The book discusses the nature and significance of (the concept of) Time by relating Time to several "factors" in corporate human experience. These factors are, sequentially, the Religious factor, the Power factor, the Social factor, the Ego factor, and the Culture factor. The analysis discloses that individuals should never be subordinated to Society, although as a matter of fact most people are.

- RENIER, Gustaaf Johannes.** *History, Its Purpose And Method.* Boston Beacon Pr 1950.
- This is a discussion of the function and methodology of history. The author seeks to point out how history does perform a social task. The first part of the book attempts to answer the question, What is history? A second part is given to the methods employed in detecting events, problems of certitude, and establishing knowledge of events. A final part of the book develops the writer's philosophy of history which, he says, has been influenced by Henri Pirenne, and by William James, Schiller, Sidgwick and Dewey.
- RENIUS, Carol.** Three Views Of A Candle. *J Phil* 40,633-634 N 43.
- RENOU, Gaston.** *An Essay On A New Philosophy Of Nature.* Hicksville NY Exposition Pr 1975.
- Through an analysis of the Christian view that man is master of the earth and of criticisms of the transcendental aspects of Christian theology, the author proposes a monistic view of nature that places man within nature and not against it. The author's program for this monistic view uses some religious traditions and ideas of the North American Indian.

- RESCHER, Nicholas (ed)** and Baier, Kurt (ed). *Values And The Future: The Impact Of Technological Change On American Values.* NY Free Pr 1969.
- This collection integrates the work of philosophers in clarifying theoretical and methodical concepts with that of social scientists in generating and testing hypotheses, to predict the outcomes of probable changes in American technology and values in the next 30 years. Contents are divided into 3 main sections. Part One, "Analysis," provided behavioral definitions of the key terms "value" and "value change," clarification of criteria of related terminology, and several sketches of techniques of applying the resultant conceptual scheme and methodology to past and future value change/technological change interactions. Part Two, "Interaction"; involves numerous hypotheses about the character of the relationship between values and technology and poses many issues for future investigation. Part Three, "control," takes up the issue of how the interaction of value and technology can be influenced. An introductory essay provides a summary and partial critique of the 3 parts.
- RESCHER, Nicholas.** *Galen And The Syllogism.* Pittsburgh Pittsburgh Univ Pr 1966.
- RESCHER, Nicholas.** *Introduction To Value Theory.* Englewood Cliffs NJ Prentice-Hall 1969.
- RESCHER, Nicholas.** *Many-valued Logic.* NY McGraw-Hill 1969.
- RESCHER, Nicholas.** *Scientific Explanation.* NY Free Pr 1970.
- Rescher's book is a very mixed bag. In the preface, he indicates that the book is operating at three levels, textbook, monographic treatise, and polemical tract. This diversity in aim is its undoing. Of the more interesting remarks are those on the nature of probabilistic explanations, the mind-dependence of laws and the aims of science. There are two appendices on "Are Historical Explanations Different?" and "On the Epistemology of the Inexact Sciences," which are revisions of material that has appeared in print elsewhere. There is a 30 page bibliography on scientific explanation which should prove useful for investigators. There is an author but no subject index.
- RESCHER, Nicholas.** *Studies In Arabic Philosophy.* Pittsburgh Univ Of Pitt Pr 1968.
- Rescher is one of the few logicians equipped to deal with the whole of logic in the original languages. Arabic logic is particularly fortunate in finding such an interpreter. This book however is not a systematic treatment, but a series of topical essays. Perhaps its usefulness is to acquaint the uninitiated with the flavor and tone of Arabic logic.
- RESCHER, Nicholas.** *Studies In The History Of Arabic Logic.* Pittsburgh Pittsburgh Univ Pr 1963.
- In the ten essays brought together in this volume, the author discusses different aspects and problems related to the intellectual history of Islam and centered around logical and philosophical issues. The guiding line is that Arabic logic is entirely Western and has nothing to do with "Oriental Philosophy." Six of the essays have appeared in different journals. The first essay, written especially for this volume, gives a brief account of the history of Arabic logic. The other essays deal with particular texts and problems related to the writings of such thinkers as Al-Farabi, Al-Kindi, Avicenna, Abu 'l-Salt of Denia, Averroes. The book contains extensive bibliographical references, documentary and critical notes.
- RESCHER, Nicholas.** *The Development Of Arabic Logic.* Pittsburgh Pittsburgh Univ Pr 1964.
- The book begins with a chapter on the "first century" of Arabic logic which is understood to be a period of transmission, translation and assimilation of mainly Alexandrian Aristotelianism. The author relates how toward the end of the development of Arabic logic the initial relationship which logic bore to medicine, mathematics and astronomy was replaced by a new kinship with the Islamic "sciences" of theology, law, philology and rhetoric.
- RESCHER, Nicholas.** *The Logic Of Commands.* NY Dover 1966.
- This book presents a comprehensive account of the currently developing logic of commands. Rescher places the study of this logic in historical perspective by indicating who proposed what, and when. Rescher indicates alternatives to his approach and provides reasons for rejecting them. The notation that Rescher employs has a place for the agent, the action to be performed, and the condition under which it is to be performed. The central concepts of Rescher's treatment are command coverage and validity. These are considered for both homogeneous and heterogeneous inferences.
- RESCHER, Nicholas.** *The Philosophy Of Leibniz.* Englewood Cliffs NJ Prentice hall 1967.
- The book is intended as an introduction to Leibniz's thought. Covering a wide variety of topics, including Leibniz's views in ethics, the highlight of the book is the author's explication of Leibniz's various metaphysical principles. The author also attempts to defend Leibniz's views on relations against the attacks of Russell.

RESCHER, Nicholas. *Unselfishness: The Role Of The Vicarious Affects In Moral Philosophy And Social Theory.* Pittsburgh Pittsburgh Univ Pr 1975.

Rescher seeks to reinstate concern for other persons in the theories of current ethics and economics. Starting from Adam Smith's moral sympathy he argues that sharing in the joys and sorrows of one's fellows must not be neglected in moral philosophy. Chapter 2 introduces the notion of "participatory transfer rate" for altruistic feelings and also "units of utility." His criticisms of recent approaches to practical reasoning in subsequent chapters lend support to his claim that vicarious affects ought to be motivational factors in the moral decisions of both individual persons and developed societies.

Spotting an incompatibility among the following propositions: (1) Everything that is past and true is necessary, (2) The impossible does not follow (from) or (after) the possible, and (3) What neither is nor will be is possible, Diodorus used the plausibility of the first two propositions to establish the thesis that nothing is possible which neither is nor will be true. Rescher tries to set forth a "modern-dress argument in the spirit of that of Diodorus" which (1) stays within the orbit of recognizably Diodorean ideas, (2) is logically cogent by present-day standards or rigor, and (3) accomplishes the aims that Diodorus seems to have had in mind for the Master Argument.

RESCHER, Nicholas. The Revolt Against Process. *J Phil* 59,410-417 J1 62.

One purpose of this paper is to establish the fact that there is a general tendency among current writers on ontological subjects—particularly those of the analytic bent—to exile change and process from ontology in favor of a static thing-quality paradigm. Another purpose is to revoke the too readily granted credentials of this ontological doctrine. Its strongest support derives from P F Strawson's *Individuals*, and the paper tries to show that Strawson's entire approach to questions of ontological status is based upon an unacceptable premise—the thesis that identifiability-dependence constitutes a criterion of ontological priority.

RESCHER, Nicholas. Three Commentaries Of Averroes. *Rev Metaph* 12,440-448 Mr 59.

RESNICK, Lawrence. Confirmation And Hypothesis. *Phil Sci* 26,25-30 Ja 59.

RESNICK, Lawrence. Empiricism And Natural Kinds. *J Phil* 57,555-558 Ag 60.

The author examines the function of the doctrine of natural kinds in H H Price's version of empiricism. He argues that Price's theory presupposes this doctrine, that the doctrine is fallacious, and that it is impossible, on Price's own grounds, to abstract concepts from sense experience.

RESNICK, Michael David. Frege's Theory Of Incomplete Entities. *Phil Sci* 32,329-341 O 65.

This paper examines four arguments in support of Frege's theory of incomplete entities, the heart of his semantics and ontology. Two of these arguments are based upon Frege's contributions to the foundations of mathematics. These are shown to be question-begging. Two are based upon Frege's solution to the problem of the relation of language to thought and reality. They are metaphysical in nature and they force Frege to maintain a theory of types. The latter puts his theory of incomplete entities in the paradoxical position of maintaining that it is no theory at all. Moreover, his metaphysics rules out well-known suggestions for avoiding this difficulty.

RESNIK, Michael D. A Decision Procedure For Positive Implication. *Notre Dame J Form Log* 3,179-186 1962.

RESNIK, Michael David and Cheng, Chung-ying. Ontic Commitment And The Empty Universe. *J Phil* 62,359-363 J1 65.

In standard quantificational theory the validity of a quantificational schema such as $(\exists x (Fx \vee \sim Fx))$ is defined over nonempty universes. The objection has been made, however, that, because of this, logic will force existence claims upon us. To avoid this objections, it has been suggested that Quine's criterion of ontic commitment be modified in such a way that quantificational logic should not commit us to at least one thing. The purpose of this paper is to show that this problem is not as serious as it appears. After accepting the standard definition of quantificational validity, one can always make a distinction between defining quantificational validity and interpreting quantifiers in a quantificational schema, and then there need be no alarm that the standard quantificational theory should force any particular existence claims upon us; for the exclusion of empty universes from the standard definition of quantificational validity does not entail ontic commitment to particular things.

RESNIK, Michael David. On Skolem's Paradox. *J Phil* 63,425-437 Ag 66.

This paper deals with the so-called Skolem Paradox, namely, the fact that the standard systems of set theory contain theorems which assert that an uncountable number of sets exist, yet if these systems are consistent they also have countable models. Skolem and others have interpreted this result as implying the relativity of uncountability: every set which is uncountable in a given system is countable in another system. It is argued that this runs up against the problem of the intersystematic identification of sets to which the adherents of Skolem's thesis have not offered a satisfactory solution. A weaker version of the thesis runs up against the same difficulty or else reduces to a triviality. In the conclusion a view of Skolem's Paradox is sketched which preserves the classical concept of uncountability but which requires the admission of non-quantificational meaning and truth in mathematics.

- RHINELANDER, Philip H.** *Is Man Incomprehensible To Man?* Stanford CA 1973.
- These eight chapters on the meaning of man are terse analyses, accompanied by illustrative photos and a bibliography. Agreeing with Camus and Marcel that social conflicts are traceable to differences and obscurities in our self-understanding, the author diagnoses the crisis.
- RHOADES, D H.** Essential Varieties Of Existentialism. *Personalist* 35,32-40 Wint-Ja 54.
- RHOADES, Dan.** The Prophetic Insight And Theoretical-Analytical Inadequacy Of "Christian Realism". *Ethics* 75,1-15 O 64.
- This essay deals with contemporary American Protestant ethics and international politics, focusing on Reinhold Niebuhr's "realism." Niebuhr's prophetic insight is marred by his acceptance of facets of the liberal idealism he inveighed against. His doctrine of sin contains an ambiguity which is crucial for his analysis of historical evil. His more superficial treatment of sin as egotism (rather than egoism) applied to political analysis leads him to assert the universality of egotism and makes it impossible for him to escape a liberal individualism. Niebuhr's political analysis treats social structure as the consequence of individual tendencies.

- RICE JR, Eugene F.** *The Renaissance Idea Of Wisdom.* Cambridge Harvard Univ Pr 1958.
- Examining the many conceptions of wisdom that appeared during the Renaissance, the author's aim is "to relate these individual conceptions to each other in an intelligible pattern of historical change." Against the medieval belief that wisdom was a contemplative virtue, the Italian Humanists stressed the active, worldly dimension. Chapters are devoted to the conception of wisdom in Renaissance Platonism, the Promethean man facing up to the advances in science, man's relation to the divine revelation, the transformation of wisdom from knowledge to virtue, and wisdom as a moral virtue. Charron's *De la Sagesse* is analyzed as the most representative conception of wisdom in the Renaissance.
- RICE JR, Eugene F.** Erasmus And The Religious Tradition, 1495-1499. *J Hist Ideas* 11,387-411 O 50.
- RICE, Cale Young.** *A New Approach To Philosophy.* Lebanon TN Cumberland Univ Pr 1943.
- The author of this defends a form of naturalism which he calls "quadric realism." Reality comprises four metaphysical ultimates: space, time, matter, mind. These interpenetrate, such that given a portion of any one of them, you have some of the other three; "the universe is a space-time-mind-matter 'Continuum'." With this basic notion as a kind of cure-all, the ills arising from extremism in its usual forms are treated and resolved: dualism, reductionism (materialistic, spiritualistic), supernaturalism, religious orthodoxy.

- RICE, Lee C (ed)** and Ashmore, Robert B (ed). *Moral Values In Contemporary Public Life: Proceedings Of The Mellon Symposium, 1975.* Milwaukee Marquette Univ 1975.
- Organized around three main papers—on civil liberties, on the nature of public officials, on the public abuse of morality—this book raises a number of questions that could not be answered in its relative brevity of 40 pages. In particular, Gewirth's analysis of the relationship between freedom and power is technically brilliant and Cohen's cases of "abuse" fascinating.
- RICE, Philip Blair.** *On The Knowledge Of Good And Evil.* NY Random House 1955.
- The first third of this study of 20th-century moral philosophy distinguishes the cognitivist schools (empirical naturalism, mainly American, and intuitionism, mainly English) from the non-cognitivist schools (emotivism and ordinary language). The rest of the book seeks to answer the challenge of the latter to the former by a fresh appraisal of the complex issues raised by the charge of "naturalistic fallacy." A final chapter entitled "Naturalism and the Tragic Sense" recognizes "that the moral life is infected to the end by the imminence of tragedy" but urges the reader "not to brood" on that fact.

- RICHARDS, Howard.** Deference. *Ethics* 74,135-142 Ja 64.
- Deference in morality is the idea that someone is not in a position to judge a question but ought to defer, e.g., to someone else's judgment or to God. The moral significance of the idea of deference is here developed by exploring similar phenomena in law, particularly in the interrelation of the problems of substance, procedure, and jurisdiction. Social conventions legitimize many kinds of moral deference. The idea of deference is important in understanding questions about moral absolutes which may serve as conventional pieces of wisdom to which it is demanded that everyone defer.

- RICHARDSON, Jane Shelby** and Lewis, David K. Scriven On Human Unpredictability. *Phil Stud* 17,69–73 1966.
- In this article, Michael Scriven has argued that we are unpredictable: if I want to foil your attempts to predict me, I can in principle replicate your prediction and do the opposite. But Scriven assumes that it is possible both that you have time to finish your prediction (else your failure is of no significance) and that I have time to finish my replication (else you might not fail). This assumption is suspect, since the times consumed by our two tasks are increasing functions of each other.
- RICHARDSON, John Adkins.** Dada, Camp, And The Mode Called Pop. *J Aes Art Crit* 24,549–558 Sum 66.
- This article is a consideration of the relationships among the modes of thought associated with (1) Dadaism, (2) the set of attitudes called "Camp," and (3) the Pop Art movement of the 1960s. While all these shared an irreverent posture towards sanctified aesthetic values, Dadaism was distinctive in its intellectual consistency and imaginativeness. Camp was perverse; it made the abnormal fashionable by dethroning the serious and promoting frivolity as an important aesthetic attitude. It overlapped with Pop Art which took as its victim the cultivated bourgeoisie who had arrived at a perverted broadmindedness in their consumption of artistic novelty. The paper closes with the recognition that individual works of art have always had qualities surpassing any time or movement.

- RICHMAN, Robert J.** "Something Common". *J Phil* 59,821–829 D 62.
- This paper is primarily concerned with the question: Do (must) the instances subsumed under a univocal general term have something in common? A philosopher who gives an affirmative answer to this question will be called an essentialist. Wittgenstein appears to believe that his notion of family resemblances provides a negative solution to the question of essentialism, however, it is argued that the notion of "something common" is not clear enough to justify a negative answer to the question. Furthermore, the notion of family resemblances fails to account for why we refuse to apply a certain term to those things to which we do not apply it.

- RICHMAN, Robert J.** Truth By Stipulation. *Phil Stud* 12,33–35 1961.
- This article discusses a contention of Grover Maxwell that the necessary character of analytic truths can be accounted for solely on the basis of linguistic rules or stipulations. The author contends that the stipulation of linguistic rules alone cannot account for the necessity of all analytic statements, since stipulation alone cannot account for the truth of any statement. At best, he argues, stipulations of meaning can be such as to render the truth of a given statement intuitively evident.
- RICHMAN, Robert.** On The Philosophical Significance Of What We Say. *Phil Stud* 17,21–26 1966.
- The author attempts to answer critics of "ordinary language philosophy." He does this by offering examples of the mismatch of language and reality. A spade is a spade but we often do not call a spade a spade. He concludes that what we call something is an important consideration in determining what that thing is. And this fact points out the usefulness of analysis of ordinary language.
- RICHTER, Melvin.** *Montesquieu*, By Robert Shackleton. *Hist Theor* 3,266–273 1963.
- RICHTER, Melvin.** *The Politics Of Conscience: T H Green And His Age*. Cambridge Harvard Univ Pr 1964.
- This is an intellectual biography of the man who established philosophy as an independent discipline at Oxford, and an account of the wide influence he exercised in political, philosophic, and academic affairs. Green turned German Philosophic Idealism into a vehicle of reform and through its qualities of inclusion and reconciliation he gave a rational base to the emotional, dynamic, dedication to cause, and calling to self-sacrifice of Evangelicalism. He also gave a quasi-religious sanction to citizenship and reform. In the process he transformed Evangelicalism into a liberal political theology, a "secular altruism." But the author also shows how Green's "critical," *a priori* metaphysics often led him to draw conclusions that were more the result of his evangelical will to believe than rigorous philosophizing. Concluding chapters describe the influence of Green's Idealism on British Liberal politics between 1890 and 1914, and some of Green's own political activities.

- How does rationality affect the individual's identification with his culture or way of life? Rationality has the effect of splintering the synthetic unity of cultures. As each sphere of culture is rationalized it tends to define its own ends as absolutes. But if knowledge, art, or profit are their own ends, the individual becomes merely a means to them. Individuality requires resisting these tendencies of modern life.

RIESER, Dolf. *Art And Science.* NY: 1972.

The apparently divergent disciplines of art and science are investigated for the light they can throw on one another. The introductory chapter considers modes of thinking, drawing on the findings of recent psychological research to clarify the relation between logical and critical thinking on the one hand, and creative thinking on the other. Chapter 2 uses what is known about perceptual phenomena to make artistic vision intelligible. Chapter 3 juxtaposes natural forms and basic forms of art. Chapter 4 draws on the hypothesis of the unconscious to illuminate some forms of symbolic expression in art.

RIESER, Max. The Noëtic Models Of Contemporary Philosophy. *J Phil* 57,545-554 Ag 60.

The author reflects on the split in twentieth-century philosophy between phenomenology and existentialism on the one hand and analytical philosophy on the other. He suggests that this split is due to a difference of the noëtic models behind the two types of philosophy. The models of the former are the humanities, especially history, sociology, and psychology; the models of the latter are mathematics and physics. The former takes meaning as the key principle of explanation; the latter, measure.

RIESMAN, David. *Individualism Reconsidered, And Other Essays.* Glencoe IL Free Pr 1954.

While the author of *The Lonely Crowd* is a social scientist rather than a philosopher by profession, fully half of these thirty essays raise important philosophical issues. That is especially true of the title essay and the five others which deal with "Individualism and its Context." Riesman finds "the processes of communication are inherently ambiguous, since we understand other people's symbols in terms of our own character and the experience it has let us have." Other groups of essays of some philosophical interest are those on "Marginality, Minorities, and Freedom," "Veblen and the Business Culture," "Freud and Psychoanalysis," "Totalitarianism," and "Problems of Method in the Social Sciences."

RIEZLER, Kurt. *Man, Mutable And Immutable; The Fundamental Structure Of Social Life.* Chicago Regnery 1950.

RIEZLER, Kurt. *Physics And Reality.* New Haven Yale Univ Pr 1940.

Ten lectures by Aristotle come to life in the twentieth century. He criticizes modern science for the separation of Man from Nature, of inner and outer experience and of

life and science. Both classical and quantum physics are at an impasse with regard to the problem of motion, matter and time. Aristotle attempts, then, to explain the reconciliation between the physical object and the "heart of the physicist" by the concept of substance.

RITCHIE, A D. *George Berkeley: A Reappraisal.* NY Barnes & Noble 1967.

A very different line from what is usual is taken in dealing with Berkeley. The *New Theory of Vision* is made central and is interpreted not as making visual data central but as showing that they can teach us very little without touch and motion, bodily functions. Berkeley's immaterialism is regarded primarily as an attack on substance though the author agrees with him in condemning common sense. There is a chapter on Physics without Absolutes or False Abstractions, and one on the arguments for faith in God, drawn largely from the *Alciphron*. There is then, what it is hard to find elsewhere, a chapter on Berkeley's morals, politics and economics completed by the insertion of Jessop's summary of Berkeley's case for making an absolutely universal duty of non-resistance to the rulers, and one on the *Siris*.

- RITTERBUSH, Philip C.** *Overtures To Biology: The Speculations Of Eighteenth-century Naturalists.* New Haven Yale Univ Pr 1964.
Theories of immanence and botanical analogy dominated the work of the eighteenth-century naturalists. They believed, with little factual support, that electricity was the immanent principle of the universe and that plants and animals had truly analogical functions. When the science of biology finally came into being in the nineteenth century, the romantic poets decried the positivistic approach to nature; but it was often overlooked that their poetry voiced anew the concepts of the eighteenth-century speculation.
- RIZZO, Nicholas D (ed)** and Gray, William (ed). *Unity Through Diversity, I-ii: A Festschrift For Ludwig Von Bertalanffy.* NY Gordon & Breach 1973.
This book contains 55 selections divided into four sections: I: Ludwig von Bertalanffy: Person and Work; II: General and Open Systems; III: Growth and Malignant Growth; IV: General System Theory in the Behavior Sciences: Toward a New Image of Man. Most of the selections are devoted to exploring the wide ranging implications of Bertalanffy's general systems approach.

- ROBERTS, David E.** *The Grandeur And Misery Of Man.* NY Oxford Univ Pr 1955.
The thought of the late author of *Psychotherapy and a Christian View of Man* is here represented by a collection of sermons which express the conviction that the Christian faith is the solution to man's predicament. While no systematic analysis of the human situation is attempted, various aspects of man's personal, social, and political problems are shown to be dealt with adequately only through the orientation provided by the Christian faith, and specifically by the recognition that "the real cause of our trouble is to be found in... the condition that the Bible calls 'sin'," so that "human nature itself needs to be transformed" by Christian experience.
- ROBERTS, James Deotis.** *Faith And Reason: A Comparative Study Of Pascal, Bergson And James.* Boston Christopher 1962.
The author attempts to examine the relationship of faith to reason in the philosophies of Pascal, Bergson, and James. He discovers that these three philosophers are remarkably similar in that they make a radical break from the position to which they object ("the autonomy of the rational method") and accept rather the opposite view ("the affirmation of intuition"). Each philosopher has, however, his own metaphysical structure, which differs from each other, but Pascal's "reasons of the heart" (or the notion of the immediate apprehension of truth) is accepted finally by each.
- ROBERTS, John L.** Human Minds And Physical Objects. *J Phil* 44,434-441 Jl 47.
- ROBERTS, Louise Nisbet.** A Chimera Is A Chimera: A Medieval Tautology. *J Hist Ideas* 21,273-278 Ap-Je 60.
Rejection of the truth of a tautology containing a fiction reveals something of the complexity of the terminist logic of the late middle ages. The analysis of "a chimera is a chimera," to be found in the *Sophismata* of the fourteenth century logician John Buridan, involves a theory of signs and an interpretation of logical truth.
- ROBERTS, Louise Nisbet.** Art As Icon; An Interpretation Of C W Morris. *Tulane Stud Phil* 4,75-82 1955.
Certain problems have arisen concerning a semiotic interpretation of art. It is argued that Morris's presentation offers a framework within which a more adequate theory can be constructed.
- ROBERTS, Louise Nisbet.** Classifications Of Supposition In Medieval Logic. *Tulane Stud Phil* 5,79-86 1956.
Classifications of Supposition are a characteristic portion of the terminist logic of the thirteenth and fourteenth centuries. The article contains a brief explanation of classifications to be found in the texts of such logicians as Peter of Spain, Albert of Saxony, and John Buridan.
- ROBERTS, Louise Nisbet.** Every Proposition Is False—A Medieval Paradox. *Tulane Stud Phil* 2,95-102 1953.
Paradoxes similar to that of Epimenides the Cretan are present in the highly developed logic of the late Medieval period. These "sophisms" were known as the "impossibilia" or "insolubilia." An interpretation is given of the analysis of "Every proposition is false" which is to be found in the "Sophismata" of John Buridan.
- ROBERTS, Louise Nisbet.** In Defense Of Santayana's Theory Of Expression. *Tulane Stud Phil* 12,84-90 1963.
Among Santayana's most valuable insights are those concerning the theory of expression. It is in this theory that he modifies the purism suggested by his treatment of materials and form. Account is taken of Vincent Thomas' criticism of Santayana's theory.
- ROBERTS, Louise Nisbet.** Is The Study Of Aesthetics A Philosophic Enterprise? *Tulane Stud Phil* 7,129-134 1958.
The question is considered as to whether aesthetics is philosophy or science. It is argued that although it can be expected that an increasing number of the problems of aesthetics will be subjected to investigation by more or less rigorous scientific method, the field presents many questions to which it is extremely difficult, if not impossible, to establish scientific answers. The field of aesthetics promises to continue to be a philosophic enterprise.
- ROBERTS, Louise Nisbet.** Knowledge As Hypothesis—A Fourteenth Century Analysis. *S J Phil* 4,61-68 Sum 66.
In the linguistic analysis developed by such late medieval logicians as John Buridan, the possibility of theoretic knowledge was assumed while the establishment of the truth of such knowledge was shown to rest upon conditions involving the recognition of particulars. This is explained with reference to medieval and contemporary texts.
- ROBERTS, Louise Nisbet.** Notes On The Judgment Of Taste. *Tulane Stud Phil* 3,123-132 1954.
It is argued that Kant's attempt to interpret the experience of beauty in terms of a judgment is misleading. Although he avoids reduction of the aesthetic to the intellectual, in the statement of his theory of beauty he employs terminology which suggest an intellectualistic interpretation.
- ROBERTS, Louise Nisbet.** Supposition: A Modern Application. *J Phil* 57,173-181 Mr 60.
A few twentieth century issues found in the analysis of ordinary language are explored in terms of fourteenth century logic. The late medieval theory of supposition is applied to problems appearing in the work of such recent thinkers as W V O Quine and P F Strawson.
- ROBERTS, Louise Nisbet.** Value As Comparison—A Critique. *Tulane Stud Phil* 6,95-100 1957.
An ethical system of meliorism such as that to be found in *A System of Ethics* by Edwin T Mitchell reduces the act of moral valuing to a moral judgment involving a comparison. It is argued that such a theory offers a solution to the practical problem of conduct but does not offer a solution to the philosophic problem of the nature of moral value.
- ROBERTS, Moira.** *Responsibility And Practical Freedom.* NY Cambridge Univ Pr 1965.
- ROBERTS, Patrick.** *The Psychology Of Tragic Drama, Ideas And Forms In English Literature.* John Lawlor (ed). Boston Routledge & Paul 1975.
Ancient and modern tragedy are discussed in the light of insights provided by Freudian psychoanalysis. The author finds the justification for his approach in the kinship between literature and psychoanalysis. The tragic drama, ancient or modern, emerges from the psychoanalytical investigation as strongly drama as ever, but drama of the tragic structure of consciousness in which primitive and elemental forces struggle with subtle self-deception for the honesty which often comes only just before annihilation.
- ROBERTS, Paul Craig** and Stephenson, Matthew A. *Marx's Theory Of Exchange, Alienation And Crisis.* Stanford CA Hoover Inst Pr 1973.
- ROBERTS, Victor W.** Saint Anselm Of Canterbury's Teaching On Faith. *American Benedictine Review* 21,389-406 S 70.
The purpose of the article is to present Anselm's idea of faith. This is accomplished by a consideration of those passages in his collected writings in which he uses the terms "fides" and "credere." The conclusion of the study is that while faith for Anselm is assent to and profession of divinely revealed truth, it is more than simply this. It is a living reality which enters into all one's actions and which establishes one within a community of faith which is the Church. Further, it awakens in the believer a desire and a quest to understand the truths which he has accepted on the authority of God revealing.
- ROBERTS, Victor W.** The Relation Of Faith And Reason In St Anselm Of Canterbury. *American Benedictine Review* 25,494-512 D 74.
The purpose of the article is to clarify the relation between faith and reason in Anselm—a much needed clarification inasmuch as he has been classified as a rationalist by some and a fideist by others. The method by which this is accomplished in twofold: 1) an examination of texts in which Anselm speaks of faith and reason (or understanding) and 2) an examination of how he actually goes about attaining an "intellectus fidei" in his "Cur Deus Homo?" and his "Monologion." The conclusion of the study is that Anselm avoids both the extreme positions of rationalism and fideism. He never attempts to bring unbelievers to faith by arguments from reason but within the context of faith he seeks an intellectual understanding of what is believed.

- ROBINSON, B B.** On "Thinking" And "Feeling". *Iliff Review* 45-48 Wint 75.
- This article analyzes and demonstrates the pernicious influence of the rubric "I feel" when substituted for the rubric "I think." This practice has become commonplace during the last twenty years and acts to introduce an impediment to precise speaking and clear thinking in the classroom, public speaking, advertising, everyday conversation and generally, in all areas of communication. The article emphasizes the necessity to recognize the inherent differences between the two rubrics and the desirability of using each properly, i.e., the article speaks out against the current trend to substitute "I feel" for "I think" by pointing out the logical and linguistic dangers of such a substitution.

- ROBINSON, James M** and Cobb Jr, John B. *New Frontiers In Theology: Discussions Among German And American Theologians, Vol II, The New Hermeneutic*. NY Harper & Row 1964.
- Bultmann's program of de-mythologizing has led recent German theology to an intensive concern with the question of interpretation ("hermeneutic") of Biblical text, and even to the conclusion that theology is essentially such interpretation. Fuchs (of Marburg) and Ebeling (of Zurich) provide focal essays on this theme. American comments come from Dillenberger, Funk and Wilder. The editors introduce and conclude the discussion.
- ROBINSON, James M** and Cobb, John B. *New Frontiers In Theology: Discussions Among German And American Theologians, Vol I, The Later Heidegger And Theology*. NY Harper & Row 1963.
- This is the initial volume of a new series aimed at effecting more immediate communication between German and American theologians. An introductory essay by Robinson explores recent German discussion of the later Heidegger. Heinrich Ott of Basel provides a focal essay inspired by Heidegger (and, more remotely, by Anselm); the thesis is that theology unfolds faith for the theologian himself and for his brothers in the faith. There are critical comments by three American professors (Come, Michalson and Ogden), a reply by Ott, and a summary by the co-editor.

- ROBINSON, Richard.** *Plato's Earlier Dialectic*. Ithaca NY Cornell Univ Pr 1941.
- The volume is given this descriptive title because it attempts to examine Plato's method in the early dialogues, and his theory of dialectic in the middle dialogues. The discussion of the book is divided in two parts covering (1) the elenchus, and (2) the dialectic. Part I ranges over the whole of Plato's philosophy and portrays the ideas of Plato grouped around the Socratic refutation. Part II—Dialectic, seeks to discover what new elements arise in the middle dialogues. The element of *hypothesis*, prominent only in the middle dialogues is examined in terms of (1) its nature, (2) its use by Plato as an instrument in the search of truth, and (3) its methods in the *Meno*, the *Phaedo*, and the *Republic*.

- ROCHE, Maurice.** *Phenomenology, Language And The Social Sciences*. Boston Routledge & Paul 1973.
- With careful references to a wide literature the book offers summary accounts of phenomenology, conceptual analysis and logical empiricism and the reductionism in psychology and sociology against which the humanistic reaction has developed. It seeks to show how conceptual analysis and phenomenology yield critiques of Behaviorist, Gestalt and Freudian psychology, as well as of Weber's sociology. Chapter 8 discusses humanistic psychiatry and sociological approaches to mental illness. The conclusion sets out the presuppositions of conceptual analysis and phenomenology and considers their implications for sociological theory.

- ROELOFS, H Mark.** *The Tensions Of Citizenship: Private Man And Public Duty*. NY Rinehart 1957.
- The author calls attention to the "tensions of citizenship" in a democratic society between an individual's public duty and private life, and defends "the Western heritage" of private freedom. The argument is largely historical. It traces the basic ideals of citizenship—Greek, Hebrew, and Christian-Roman. Much attention is also devoted to individualism in the American tradition. The author claims that the emphasis in recent years has been upon the citizen's relationship to the community through participation and service, but that it is also necessary to bring back the "much neglected" Christian-Roman patterns of individualism. The state must provide the conditions which make morality possible, while leaving its citizens alone to pursue their private careers. The best defense of individualism is not an appeal to utilitarianism or pragmatism, according to the author, but a philosophy built on the foundations of T H Green, A D Lindsay, and Ernest Barker.

- ROGERS, G A J.** Boyle, Locke, And Reason. *J Hist Ideas* 27,205-216 Ap-Je 66.
- The thesis of this article is that Boyle had considerable influence on Locke's thought, not only regarding the primary and secondary qualities distinction, but on other issues as well. Locke only briefly acknowledges his debt to Boyle, but the author speculates that they were good friends at Oxford. Both men emphasized the importance of

reason in doing scientific research; the author believes that Locke was not the strict empiricist he is often thought.

- These fifteen papers presented at five sessions range over five different topics—truth, epistemic logic, speech-acts, Wittgenstein's concept of criteria, and the argument against private-language. The last three are offered as topics of symposiums which have the structure of principal paper, comments and reply. Principal contributors on each of the five topics are respectively, Warnock, Prior, Searle, Garver, and Casteneda.
- ROLLINS, C D.** Contingent Privacy That Is Complete. *Phil Stud* 14,91-96 1963.
- The article goes into a particular kind of case of solipsism, that which might be called the case of "completely managed privacy" or "of privacy that is contingent but complete." The author specifies it as follows: "Suppose a person manages to conceal a certain thought of feeling from everyone else, completely and always." He notes that many persons who reject solipsism and necessary privacy on proper verificationist grounds yet accept the above specification as making sense; while others insist that the specification is nonsense. Focusing on this division, he attempts to illuminate the notions of sense, verifiability "in principle," of privacy, of concealment, and of evidence.

- ROLSTON, Holmes.** "Philosophical Aspects Of The Environment" in *Environment And Colorado: A Handbook*, Phillip O Foss (ed), 41-46. Fort Collins 1974.
- Human ecology requires re-examination of the mental component of environmental encounter. Two classical philosophical paradigms have left us ambivalent: the antagonistic one that nature is a recalcitrant resource to be tamed, hostile, indifferent, amoral; the congenial one that nature is benevolent, the good earth and beloved landscape, with its own integrities and values. Technological prowess distances man from his environment, leaving him increasingly competent but decreasingly confident, dominating an alien world. But in an ecological reappraisal, man becomes more domesticated in a planetary community he cherishes. A full account envisions man as both engineer and biotic citizen.
- ROLSTON, Howard L.** Kinaesthetic Sensations Revisited. *J Phil* 62,96-100 F 65.
- Neurological findings indicate that the nerves whose endings are in the tissues in the joints are by far the most important factors in the process by which one comes to knowledge of one's bodily positions. This paper is an attempt to demonstrate how what is most commonly taken to be the kinaesthetic-sensation view is not in accord with these and other facts. An analogy is presented which, if appropriate, suggests that while kinaesthetic sensations are a causal concomitant of proprioception, they are not, for the most part, directly involved in that process. These arguments are presented in the context of an explication and defense of G E M Anscombe's position in regard to knowledge of bodily positions.
- ROMA, Emilio.** The Scope Of The Intentional Fallacy. *Monist* 50,250-266 Ap 66.
- Difficulties with the "intentional fallacy" of Wimsatt-Beardsley arise not out of the fallacy itself but in connection with its implications and general scope. Roma discusses the 'inside-outside' distinction with Fiedler's demand that a poet's work always be viewed in connection with his world. Wimsatt-Beardsley would permit but not necessitate linking world and work but would call fallacious the insistence that a passage means such-and-so because the poet said it meant such and so in his journal.
- ROMANELL, Patrick.** *Croce Versus Gentile; A Dialogue On Contemporary Italian Philosophy*. NY Vanni 1947.
- This is an imaginary exchange of opinions between the two great thinkers of Italy. It covers their agreements and differences on the meaning of philosophy, theory of logic, philosophy of art, science and religion, and social philosophy.
- ROMANELL, Patrick.** *Making Of The Mexican Mind; A Study In Recent Mexican Thought*. Lincoln 1952.
- ROMANELL, Patrick.** *Toward A Critical Naturalis; Reflections On Contemporary American Philosophy*. NY Macmillan 1958.
- This book contains a collection of six essays originally given as lectures at several Italian universities in 1952-53. The essays attempt to present the essential features of a naturalistic philosophy. The first essay, "The New Naturalism in America," discusses the historical and systematic background of naturalism in American

- philosophy and the effort in the United States to arrive at a satisfactory Critical Naturalism. The following essays deal with the metaphysics, logic, and ethics of naturalism. Their titles are: "A Naturalistic defense of Metaphysics," "The Logic of a Critical Naturalism," "John Dewey and the Naturalistic Approach to Ethics," "Does Biology Afford a Sufficient Basis for Ethics?," "The Naturalistic View of Ethics."
- ROMANELL, Patrick.** A Comment On Croce's And Dewey's Aesthetics. *J Aes Art Crit* 8,125-128 D 49.
- ROMANELL, Patrick.** Aliotta's Radical Experimentalism. *Rev Metaph* 9,300-305 D 55.
- ROMANELL, Patrick** and Leake, Chauncey D. *Can We Agree: A Scientist And A Philosopher Argue About Ethics.* Austin Univ Of Texas Pr 1950.
- "A Scientist and a Philosopher Argue About Ethics," is the subtitle of this brief work. The essays included are about the basis of ethics, or the foundations and methods of solving ethical problems. A scientist and a philosopher present different points of view and then in criticizing each other's doctrines and arguments attempt to reach some measure of agreement. The titles of the essays include: "Ethicogenesis," "A Philosopher's Reply to a Scientist's Ethic," "A Scientific versus a Metaphysical Approach to Ethics," "A Naturalistic versus a Positivist Approach to Ethics," "A Naturalistic Logic with Metaphysics," and "Science Implies Freedom."

- ROMMEN, Heinrich A.** *The State In Catholic Thought.* St Louis Herder 1945.
- Professor Rommen in his present work offers a general exposition of Catholic views on politics. By "Catholic: thought, he means the philosophy of the state which has developed in Catholic circles during the centuries. His book is divided into four parts. The first outlines the general philosophical bases for political theory. Part two deals with the philosophy of the state, as such. Traditional notions are thoroughly discussed. In the third part, the relations of Church and State are treated. The history of the question is given briefly, from the time of the Roman Empire onward. In part four: Prominent Catholic thinkers have been slow, in the main, to give their opinion of the World State movement.

- RORTY, Amelie O.** Wants And Justifications. *J Phil* 63,765-771 D 66.
- Statements of wants and desires do not merely function as explanations of actions, but they may also be used to justify them or to defy an authority demanding justifications. The use of such expressions as "Because I want to—" (BIWT) depends on the relationship between the questioner and an agent, and their beliefs about whether the action in question is bizarre or morally outrageous. When BIWT is used as a justification, it may be used to place a factor already having an assigned priority rating into consideration in justifying a particular action, or, if the questioner and the agent do not agree about the priority ratings of various considerations, BIWT may be used by an agent to place his wants on the scale of considerations. To argue that BIWT cannot be used to justify actions in moral contexts, is not only to maintain a thesis in analytic ethics, but also to advocate a particular kind of morality. For to claim that an expression is, in certain moral contexts, misused, is implicitly to urge its disuse.

- RORTY, Richard.** Mind-Body Identity, Privacy, And Categories. *Rev Metaph* 19,24-54 S 65.
- The author contends that no method of categorizing entities and classifying linguistic expressions can be guaranteed against future empirical inquiry. To illustrate and support his position, he argues that in its "disappearance" form the identity theory (the thesis that what people now call "sensations" might prove to be brain processes) is sensible. After proposing an analogy between sensations and mythological demons, he discusses observation terms and rebuts the objection that mental events are essentially private: Privacy cannot serve as a criterion for categorical demarcation. Finally, the author argues that statements may be deviant but cannot be "conceptually confused."

ROSE, Lynn E. *Aristotle's Syllogistic.* Springfield IL Thomas 1968.

The author takes it as his main task to explore the consequences of accepting the Aristotelian syllogism as a linear array of three terms, an approach he believes will provide new insights into what Aristotle was doing in the *Posterior Analytics*, and correct numerous misconceptions about his logic. His study does not attempt to treat Aristotle's syllogistic in its entirety, and is—in its treatment of the *Prior Analytics*—sympathetic. For the rest, the author indicates that he does not value Aristotle's logic very highly. There are ten chapters in the body of the text, dealing with such themes as the relation of Plato's dialectic and Aristotle's syllogistic, the varieties of predication, the non-use of rules, the fourth figure.

ROSE, Lynn E. A Note On The *Euthyphro*, 10-11. *Phronesis* 10,149-150 1965.

ROSE, Lynn E. Plato's Divided Line. *Rev Metaph* 17,425-435 Mr 64.

The "divided line" passage of the *Republic*, where Plato divides the visible world and the intelligible world each into two sections, seems to compare the four corresponding states of the soul to the four segments of a line. The author argues however that this passage need not be interpreted with the divided line in such a prominent role. Citing a passage in the *Sophist* where production is first divided breadthwise into divine production and human production and the lengthwise into the production of originals and the production of images, she proposes and defends another interpretive diagram.

ROSE, Lynn E. The *Deuteros Plous* In Plato's *Phaedo*. *Monist* 50,464-473 JI 66.

Many interpret the *deuteros plous* or "second best way" as the hypothetical method. This paper argues that Plato is referring rather to the explanation of things in terms of their formal causes, and means only that this sort of explanation is "second best" to a teleological explanation in terms of final causes. The paper also examines and attempts to discredit some of the assumptions that seem to have led people to view the hypothetical method as "second best" or inferior. Among these are the assumptions that all hypotheses must be tentative and that there can be only one hypothesis per argument.

ROSE, Lynn E. The Cartesian Circle. *Phil Phenomenol Res* 26,80-89 S 65.

This paper suggests that the appearance of circularity in Descartes' arguments is due to a lack of precision in his statements of them, rather than to any flaw in his reasoning. The clear and distinct perceptions presupposed in the demonstrations of the existence of God are not the same as those whose reliability depends upon the existence of God. He is presupposing the reliability only of those clear and distinct perceptions which are known through the light of nature and have metaphysical certainty in that they cannot be imagined false even on the demon hypothesis. And the only clear and distinct perceptions whose reliability he is demonstrating are those which are not known through the light of nature with metaphysical certainty but are subject to metaphysical doubt on the demon hypothesis, even though they have moral or psychological certainty.

ROSE, Mary C. *Essays In Christian Philosophy.* Boston Christopher 1963.

This book consists of related essays that expound and defend Trinitarian Christianity, Philosophy of Religion and Christian Theology, emphasizing the contrasts, without minimizing the similarity between it and humanism and naturalism. When a man commits his will freely to a loving personal God, and lives in the faith that personal existence is immortal, he gains, through grace, a spiritual perspective on every aspect of life, transforming moral power, and a quality of peace that transcends humanistic-naturalistic-rationalistic dimensions without sacrificing human fulfillment as an ideal.

ROSE, Mary Carman. Epistemologically Privileged Capacities. *Ethics* 75,40-46 O 64. Empiricism is possible only for thinkers who have certain highly developed capacities which are epistemologically significant and may be called "epistemologically privileged capacities." Examples of these are certain sensory capacities, intelligence,

integrity, technical skills, etc. Similarly, the appreciation and appropriation of a moral ideal require special capacities and these also may be epistemologically privileged, i.e., may be necessary for insight into the nature of things. Attempting to appropriate a moral ideal may render possible experience of which we should otherwise be deprived.

It is assumed that no criteria of significance, in the sense of a definition or generalization about significant sentences, is possible unless we already know how to distinguish between significant and meaningless sentences. Since logic is thinking and speaking, the ordinary idiom is first. Rosen attacks the dogmatism of logical empiricism in English-speaking philosophy, and claims that its epistemology comes into being by assuming itself to be true. The "common sense" world is a magical notion; should we wish to transcend this world, or that of the state, we can do so only by accepting another matrix, (or magical construction). An attempt to expunge magical constructions can only result if it is successful, in political and epistemological chaos. An aware society is one that offers a ground for political things, not by blind adherence to magic but by the recognition of magic.

ROSEN, Stanley. *G W F Hegel: An Introduction To The Science Of Wisdom.* New Haven Yale Univ Pr 1974.

S Rosen asserts that Hegel's work can only be understood by the main tenets of his logic, especially by his doctrine of contradiction and negativity. The volume describes Hegel's philosophy as a response to both the scientific revolution of modern times and to the Platonic-Aristotelian tradition, which this revolution intended to overcome. Hegel's system absorbs intellectually the mathematically-oriented analysis of phenomena and the conception of subjective activity of thought in dialectical doctrine of the Absolute as the Whole. The study of Hegel's philosophy of history turns into the study of the doctrine of contradiction and its crucial elements. The ten chapters of this volume discuss the central components of Hegel's system.

ROSEN, Stanley. *Nihilism: A Philosophical Essay.* New Haven Yale Univ Pr 1969.

This study is a defense of reason pursued by attacking nihilism, which, the author claims, is rampant in twentieth century philosophical and political thought. It is argued that both the views of Wittgenstein and Heidegger are nihilistic and have silence or the inability to make certain distinctions as consequences.

ROSEN, Stanley. *Plato's Symposium.* New Haven Yale Univ Pr 1968.

This book is a detailed discussion of problems, issues, themes and *dramatis personae*, with extensive observations based on a study of the relationship of the *Symposium* to other dialogues. Analysis of arguments, interpretations, and explorations by modern authorities are presented in critical notes. The treatment of the *Symposium* is carried out with special emphasis on the fundamental role of dramatic form as an essential part of the argument itself.

ROSEN, Stanley. Ideas. *Rev Metaph* 16,407-441 Mr 63.

The author argues that the quarrel between the ancients and the moderns, as exemplified in Plato and Hegel, essentially concerns the relationship between being and time or philosophy and history. In this article, he considers the nature and necessity of Ideas in the Platonic sense of the term. He defines Ideas in terms of the relations between unity and multiplicity and maintains that Ideas are the condition of the intelligibility and existence of things. In developing his views he discusses the

- doctrine of emanation, the problem of motion, the distinction between Ideas and forms, and Plato's critique of Parmenides.
- ROSEN, Stanley.** Order And History. *Rev Metaph* 12,257-276 D 58.
- ROSEN, Stanley.** Philosophy And Historicity. *Rev Metaph* 14,110-133 S 60.
- ROSEN, Stanley.** Political Philosophy And Ontology. *Phil Phenomenal Res* 18,536-540 Je 58.
- ROSEN, Stanley.** The Role Of Eros In Plato's *Republic*. *Rev Metaph* 18,452-475 Mr 65.
The author hypothesizes that for Plato philosophy includes two basic aspects, the poetic and the mathematical, and that these philosophical methods represent two fundamental and mutually complementary inflections of Eros. He further argues for a relationship between the *Symposium*, where poetry and the love of beauty are at issue, and the *Republic*, where mathematics and the impersonal love of justice are emphasized. In explicating the role of Eros in the *Republic*, the author examines Glaucon's character and contribution in depth.
- ROSEN, Stanley.** Wisdom: The End Of Philosophy. *Rev Metaph* 16,181-211 D 62.
The author argues that in order for philosophy to be present its end, wisdom, must be visible, and that although the visibility of the end is not identical with its achievement the intelligibility of wisdom as a regulative ideal does illuminate every particular philosophical issue. In elaborating his position he defines philosophy as the rational speech or logos of wisdom in contrast to mere chatter and the ecstatic silence of mysticism, and he examines the classical conception of philosophy as war.
- ROSEN, Steven J.** *Samuel Beckett And The Pessimistic Tradition*. New Brunswick NJ Rutgers Univ Pr 1976.
In Part I of this book the author considers several themes which permeate the writings of Samuel Beckett. In conjunction with the claim of meaning, the author examines the themes of consolation, pessimism, skepticism, death, and the role of the "sage" in Beckett's writings. In Part II the author focuses upon Beckett's *Proust* in order to show, in addition to the traditional character of Beckett's pessimism, the singularity and extremity of his thought by comparing Beckett on selected themes with Nietzsche, Proust, Schopenhauer, Kierkegaard, St Augustine, Descartes, Sartre, Hume, and other philosophers.
- ROSENBERG, Alexander.** *Microeconomic Laws: A Philosophical Analysis*. Pittsburgh Pittsburgh Univ Pr 1976.
The book offers a conceptual and methodological analysis of neo-classical microeconomics, with a view to determining whether its general statements meet standards for law-likeness drawn from the natural sciences. This determination involves treatment of the nature of economics explanation, the reasons/causes controversy, and the claim of Wittgenstein's followers that social science is conceptually confused. After offering a positive account of the nature of economic laws, the work turns to an assessment of views about their nature offered by positivist inspired economists, and to the treatment of general issues in the social sciences and their philosophy for which the account of economic laws offered has consequences.
- ROSENBERG, Bernard.** *The Values Of Veblen: A Critical Appraisal*. Washington DC Public Affairs Pr 1956.
Although the author's own values "lean in the same direction" as those of Thorstein Veblen (1857-1929), he does not hesitate to subject Veblen's values to an exacting appraisal which uncovers "some seriously faulty thinking, some second-hand ideas that are worn out altogether, and a quantity of vagueness and haziness." And yet he concludes that Veblen's "conglomeration of hunches, insights, philosophies, and impressions" stands up "remarkably well."

- ROSENKRANZ, Samuel.** *The Meaning In Your Life*. NY Philosophical Lib 1958.
The author advances three theses: (1) The world forms a system ordered by universal "pulsation." Each phenomenon shares in this pulsation. (2) Man has free will (which the author calls "the fifth dimension"), for the Heisenberg principle makes determinism untenable. (3) It is free will which gives life meaning. There are numerous illustrations drawn from literature, politics, and art.
- ROSENMEYER, Thomas G.** The Shape Of The Earth In The *Phaedo*: A Rejoinder. *Phronesis* 4,71-72 1959.
- ROSENSTEIN, Leon.** On Aristotle And Thought In The Drama. *Critical Inquiry* 3,543-565 Spr 77.
The author attempts to show how thought, the third subject or component of the action in drama (the first and second being plot and character) is expressed in the art form of tragedy. Based upon a reinterpretation of the Aristotelian schema, it is demonstrated how thought functions in drama and how this differs from its functions in philosophical statement.
- ROSENSTOCK, Gershon G.** *Toward A New Morality*. NY Philosophical Lib 1967.
- ROSENSTOCK, Gershon George.** *F A Trendelenburg: Forerunner To John Dewey*. Carbondale S Illinois Univ Pr 1964.
This book lays bare three pregnant premises concerning a German philosopher and two American philosophers, and draws therefrom a significant conclusion concerning the influence of the German on the more famous of the Americans. The premises are: (1) Trendelenburg was the teacher of George Sylvester Morris; and (2) Morris influenced John Dewey, as stated by Dewey himself; but (3) some of Dewey's teachings are closer to Trendelenburg's viewpoint than to Morris's. The conclusion inferred by Rosenstock is that Dewey was probably influenced directly by Trendelenburg and not merely indirectly through Morris. As no explicit reference by Dewey to Trendelenburg has been found, Rosenstock's conclusion must be evaluated by each reader on the basis of the cited Dewey-Trendelenburg parallels.

- ROSS, Alf.** Imperatives And Logic. *Phil Sci* 11,30-46 Ja 44.
- ROSS, Floyd H.** *Personalism And The Problem Of Evil*. New Haven Yale Univ Pr 1940.
This book is a study of the Boston personalists, Bowne, Knudson, and Brightman. Ross is concerned with the personalistic solution of the problem of physical or natural evil. Bowne and Knudson, he finds, end by regarding evil as somehow good, or by confessing ignorance and appealing to faith. Brightman, he believes, comes much closer to a satisfactory solution of the problem, having given up said axiom, and insisting on the reality of evil. Brightman rightly argues, according to Ross, that God is finite and is struggling against a Given of brute fact.

- ROSS, Ian.** Hutcheson On Hume's *Treatise*: An Unnoticed Letter. *J Hist Phil* 4,69-71 Ja 66.
- ROSS, J F.** Did God Create The Only Possible World? *Rev Metaph* 16,14-25 S 62.
That God is the absolutely perfect creator of the world implies that this is the only possible world, for the perfect being can only do what is best, and all other alternatives are logically impossible; but that God created the world by an act of free will entails that this is not the only possible world, for genuine alternatives are a logically necessary condition of freedom. The author examines the positions of Aquinas, Leibniz, and Spinoza on this problem and argues that the concept of free and reasonable action, as applied to God, must be revised.
- ROSS, J F.** Logically Necessary Existential Statements. *J Phil* 58,253-262 My 61.
Leibniz's attempt to establish the existence of God by an analysis of contingency observable in other things provides the focus for this article. The author attempts to restate the argument in such a way as to obviate the standard objections to it. He reduces it to a single question and answer. Given that there is at least one true contingent statement, does the fact that the statement is true and contingent entail anything interesting? Yes, he answers, that fact entails that there is another existential statement which is true but not contingent.
- ROSS, J F.** Suarez On "Universals". *J Phil* 59,736-747 N 62.
This is an exposition of Francis Suarez's treatment of the following two questions: (1) What sort of *Community* obtains among things that are properly said to be of the same sort? (2) In what sense can any *reality* be correctly called universal? The paper explains Suarez's claims that there are real universals and that there is fundamentally but not formally a real community in reality. The pivotal problem is seen to concern

- the meaning of 'similarity', since it does *not* mean having something in common. The paper offers the only resolution of the problem reconcilable with Suarez's own statements, indicating that it commits him to a very novel (in his time) form of conceptualism.

- ROSS, Ralph Gilbert.** *Obligation: A Social Theory*. Ann Arbor Univ Of Mich Pr 1970. This book is about the pervasiveness and indispensability of morality, whether recognized or not, to a meaningful human social existence. Though other modes of explaining and understanding society are valuable and essential, by "the principle of limited categories" no one field of inquiry exhausts what man in society is actually like. Accordingly "obligation as a social category requires analysis and evaluation." The proper viewing of the relation of this concept to the social enterprise will help to clarify not only our efficient successes but our moral failures and possibilities.
- ROSS, Ralph Gilbert.** *Democracy, Party, And Politics*. *Ethics* 64,100-125 Ja 54.
- ROSS, Stephen David.** *In Pursuit Of Moral Value*. San Francisco Freeman Cooper 1973. In this book a systematic examination of moral value is made as an ongoing, evolving process for the development of means for making moral decisions in a perilous and changing world. The relevance of empirical information is considered as well as the character and role of moral principles and ideals—in particular, their role as substantive, constitutive, and regulative. The major emphasis is upon the changing character and applications of moral principles and the risks involved in all moral action. The differences and similarities of moral and political action are considered in detail.
- ROSS, Stephen David.** *The Nature Of Moral Responsibility*. Detroit 1973. This book presents a systematic and detailed examination of the concept of moral responsibility with an emphasis on the importance of knowledge—of circumstances, oneself, and others—to responsible action. Detailed discussions are presented of bad faith, the wise man, and neurotic self-denial in their application to moral and other forms of responsibility. Finally, two types of responsibility are discriminated: one a pervasive responsibility essentially rooted in rudimentary moral consciousness; the second a complete responsibility rooted in adequate knowledge and rational methods devoted to avoiding failure in action.

- ROSSITER, Clinton.** *Conservatism In America*. NY Knopf 1955. Primarily an attempt to analyze and define American conservatism, this study locates it in a political spectrum which includes revolutionary radicalism, radicalism, liberalism, conservatism, standpatism, and reaction. Conservatism in America then turns out to be paradoxically intertwined with liberalism on the one hand, and corrupted by the antiintellectualism of the standpaters and reactionaries, on the other. "In the realm of ideas," concludes the author, "American conservatism has proved an impotent failure."
- ROSSNER, William** and Renard, Henri. *Philosophy Of Conduct*. Kansas City MO Rockhurst College 1962.
- ROSTHAL, Robert.** *The Ascription Of Mental Predicates*. *Phil Stud* 12,20-27 1961. The article takes up Strawson's attempts to mediate between a skeptical position with regard to the existence of mental states in others and a philosophical behaviorism which would identify such states with observable behavior. He specifically examines Strawson's rule of "P-predicates," the concept of the person on which the rule is based, and the notion of behavior as a logically adequate criterion of ascription. He concludes that Strawson has not effectively dealt with the views of the skeptic.
- ROSTHAL, Robert.** *Use And Rules Of Use Of "The"*. *Phil Phenomenol Res* 18,256-258 D 57.
- ROSZAK, Theodore.** *A Just War Analysis Of Two Types Of Deterrence*. *Ethics* 73,100-109 Ja 63. The Kennedy administration recently has apparently decided that counterforce deterrence (first strike capacity) should be developed in addition to minimum deterrence (retaliatory capacity). The author analyzes the two kinds of deterrence from the point of view of the doctrine of the just war. Minimum deterrence is criticized on the grounds that it is aimed against civilian populations. But counterforce results, even if "incidentally," in equal loss of civilian life and, after its first strike, is morally identical with minimum deterrence. The Kennedy "mix" of the two is twice as bad as either alone, and, even alone, neither meets criteria of just war.
- ROTENSTREICH, Nathan.** *Basic Problems Of Marx's Philosophy*. Indianapolis Bobbs-Merrill 1966. The author presents an analysis of Marx's early ("basic") thought. After an introductory chapter on Hegel, Feuerbach, and Marx, Rotenstreich offers a new English translation of Marx's eleven "Theses on Feuerbach," including the famous thesis 11: that whereas philosophers are concerned with interpreting the world, what matters is to change it. He then provides an extensive commentary on the eleven theses, with reference to their nineteenth-century German philosophical setting; continues with an examination of Marx's *The Poverty of Philosophy*; and concludes with a discussion of Marx's concept of alienation as the suppression of the worker's personal reality through capitalist society's emphasis on the worker's material product.
- ROTENSTREICH, Nathan.** *Between Past And Present: An Essay On History*. New Haven Yale Univ Pr 1958. Rotenstreich sees history as a domain defined by the distinctive relation between the historical subject and the historical process, which are ontologically identical but epistemologically separate. The dialectic between subject and object sets the framework for discussions of objectivity, historical time, the relation of history to the social sciences, and the role of causality and laws in history.
- ROTENSTREICH, Nathan.** *Jewish Philosophy In Modern Times: From Mendelssohn To Rosenzweig*. NY 1968.
- ROTENSTREICH, Nathan.** *On The Human Subject*. Springfield IL Thomas 1966. In the preliminary chapters the author examines the notion of the human subject from a phenomenological standpoint. Part Two consists of a discussion and rejection of ethical relativism; an analysis of the relatedness of values and reality; and the treatment of two specific ethical phenomena, lying and being ashamed. The final section deals with politics, concluding with a justification of certain human rights.
- ROTENSTREICH, Nathan.** *Between Rousseau And Marx*. *Phil Phenomenol Res* 9,717-719 Je 49.

- ROTENSTREICH, Nathan.** *Kant's Dialectic*. *Rev Metaph* 7,389-421 Mr 54.
- ROTENSTREICH, Nathan.** *Modes Of Value Realization*. *Ethics* 73,126-132 Ja 63. Phenomenological analysis can shed light upon the morphologically distinguishing marks of three modes of relationship between reality and values. These three are: embodiment in complete states, actualization in concrete acts and promotion through auxiliary conditions. This analysis uses a phenomenological morphology of value different from the two usual ones in which values are either typed according to their realms or according to their status.
- ROTENSTREICH, Nathan.** *On Shame*. *Rev Metaph* 19,55-86 S 65. Citing Aristotle, Aquinas, and Spinoza, the author opens his discussion with a review of formal philosophical descriptions of the phenomenon of shame. He then examines the tension between oneself or one's own deeds and the evaluation of those deeds, and compares Hegel and Scheler on the ontological placement of shame. The author next considers Aristotelian, Kantian, and Spinozan views on the ethical significance of shame and discusses the objectifying look of the other in Sartre's phenomenological ontology. Finally, he introduces the related concepts of self-identification and accountability, where the latter is self-identity ethically conceived.
- ROTENSTREICH, Nathan.** *On Specialization*. *Personalist* 45,193-206 Spr—Ap 64.
- ROTENSTREICH, Nathan.** *On The Ecstatic Sources Of The Concept Of "Alienation"*. *Rev Metaph* 16,550-555 Mr 63. The author traces the term and concept of alienation to its contemplative sources and discusses the changes the term has undergone in modern thought. After noting the early legal and metaphorical meanings of the Latin alienatio, he considers its links with the Greek alloiosis as mediated by ecstasis in Plato and Plotinus, and comments on its ecstatic use in Augustine and Richard of Saint-Victor. He then argues that with the modern abandonment of the transcendent realm the concept of alienation came to connote either an improper transcendence (Hegel), or a fictitious one (Feuerbach), or a perverted one (Marx).

ROTENSTREICH, Nathan. Some Remarks On The Formal Structure Of Hegel's Dialectic. *Phil Phenomenol Res* 5,242-254 D 44.

ROTENSTREICH, Nathan. The Genesis Of Mind: A Critical Prolegomena. *Rev Metaph* 15,351-364 Mr 62.

The author's purpose is to examine several philosophical approaches to the position of mind in the two senses of consciousness and content. He first considers Hegel's totalistic doctrine of mind as spirit, according to which there is no realm exterior to mind which could serve as its ultimate origin. He then discusses at length the genetic account offered by naturalists like David Rapoport and William Stern and the historical explanation proposed by Marx. The author's critical analysis of these positions leads him to conclude that a constructive theory of mind has to be placed between totalism and derivatism.

ROTENSTREICH, Nathan. The Genesis Of Mind: A Critical Prolegomena, II. *Rev Metaph* 15,586-601 Je 62.

The author's purpose is to examine several philosophical approaches to the position of mind in the two senses of consciousness and content. He first considers Hegel's totalistic doctrine of mind as spirit, according to which there is no realm exterior to mind which could serve as its ultimate origin. He then discusses at length the genetic account offered by naturalists like David Rapoport and William Stern and the historical explanation proposed by Marx. The author's critical analysis of these positions leads him to conclude that a constructive theory of mind has to be placed between totalism and derivatism.

ROTH, Robert J (ed). *God Knowable And Unknowable*. Bronx NY Fordham Univ Pr 1973.

This volume, a *festschrift*, is made up of a collection of 12 essays. One section of the book is largely historical, the other of a more speculative character. It is a technical philosophical work.

ROTH, Robert J (ed). *Person And Community: A Philosophical Exploration*. NY Fordham Univ Pr 1975.

This book is a collection of nine critical essays on problems of religious anthropology. The attempt is made in each essay to bridge secular and religious thought, e.g., Feldstein on Freud, Roth on Dewey, Krauss on Whitehead and Skinner. A discussion of issues of community, and social change from a modern Roman Catholic point of view is useful particularly for advanced students in theology and the philosophy of religion.

ROTH, Robert J. *American Religious Philosophy*. NY 1967.

ROTH, Robert J. *John Dewey And Self-Realization*. Englewood Cliffs NJ Prentice-Hall 1962.

This book is an exposition of the unity of Dewey's philosophy understood as the most representative presentation of the dominant theme of American thought. The last two chapters discuss in somewhat greater detail Dewey's rejection of transcendental religion, and attempt to show that the ideal he presents is inadequate and ill-defined.

ROTH, Robert J. How "Closed" Is John Dewey's Naturalism? *Int Phil Quart* 3,106-120 F 63.

ROTH, Robert J. Is Peirce's Pragmatism Anti-Jamesian? *Int Phil Quart* 5,541-563 D 65.

The growing interest in the philosophy of Charles Sanders Peirce has tended to heighten the opposition between his pragmatism and that of William James. Though the differences between the two are clear, there are also some striking similarities. This is seen especially in Peirce's treatment of "matters of vital importance" as applied to the "Neglected Argument" for the reality of God. Peirce and James would then appear to be in remarkable agreement regarding empiricism, the appeal to personal experience, a pragmatic test in terms of human conduct and growth, and a right to believe in God when empirical evidence does not decide the issue. If this thesis is correct, then there are good reasons for supposing that James understood Peirce quite well and that he developed some of Peirce's insights along directions already taken.

ROTH, Robert Paul. *Story And Reality: An Essay On Truth*. Grand Rapids MI Eerdmans 1973.

We live in a story-shaped world. The nature of reality can not be reduced to an idea, a thing, an impression, or a process. Reality must include as categories, freedom of action, the absurd, the comical, the tragic, desire, hope, mystery and many other elements which can be exhibited only in the shape of story. Stories have persons in conflict and in community. They also have stage properties, place, and time. Instead of the world being an impersonal process it is in reality, in being, a continuing story which celebrates but does not solve its mystery.

ROTHSTEIN, J M and King-Farlow, John. The Logic Of Tyranny: A New Russian Voice. *Massachusetts Review* 5,11-26 Autumn 63.

This article analyzes and evaluates the "Free Philosophical Treatise" of the (then captive) Russian Logician A S Yesenin-Volpin. Yesenin-Volpin's attacks on Dialectical Materialism are of considerable interest. But some odd fallacies appear. For example, Yesenin-Volpin's attack on Aristotelian logic is curiously Neo-Marxist: the attack on misuses of "Tertium Non Datur" confuses Contradictories and Contraries. His critique of materialist reductionism would be strengthened by explicit reference to concepts of intentions and rules. His critique of faith possibly opposes too much scepticism to everything at once. His own faith in the moral and political value of logically reforming language will remind some of noble Positivists' optimism.

ROTHSTEIN, Jerome. *Communication, Organization, And Science*. Indian Hills CO Falcon's Wing Pr 1958.

From an operationalist and "information-organization view-point," the author reviews concepts from information and communication theory. The concept of "entropy" is reformulated in relation to human evolution, and its potentialities as a theory of organization sketched in relation to biology, behavior, social science, general methodology and philosophy. The hope is expressed that the next step in the progressive emergence of states of higher organization in society will be a "unified world outlook." In the 85-page foreword by C A Muses, communication theory and negative entropy as definitions of organization are applied to mind as "the order-producing function of man," with both mathematical models and discursive arguments for the entropy approach to organization.

ROURKE, Francis E. Urbanism And American Democracy. *Ethics* 74,255-268 JI 64.

Concentrating on the thought of Thomas Jefferson, the author explores anti-urbanism in American thought and the tendency to equate democracy with agrarianism. Empirical evidence proves, contrary to these widely held ideas, that if urbanization does not inevitably strengthen democracy, rural areas are not necessarily the backbone of a democratic society.

ROUSSEAU, Edward. Essence And Supposit In The Angels According To St Thomas. *Mod Sch* 33,241-256 My 56.

ROUSSEAU, G S (ed). *Organic Form: The Life Of An Idea*. Boston Routledge 1972.

The book is based on the discussion at the 'Literature & Science Section' of the annual "Modern Language Association" meeting held at New York in 1970. It is concerned specially with the concept as applied in Art but also with the history of the development of the concept and its bearing on science. The first article is concerned with the development of the idea in ancient philosophy. The second traces its influence in the 18th & 19th centuries especially on biology and painting with particular reference to the theories of Goethe and Coleridge. It is entitled: Organic Form: Aesthetics and Objectivity in the Study of Form in the Life Sciences. The third is entitled: Organic Form: Some Questions about a Metaphor. It points out the limitations in the analogy between organic form in living creatures and in works of art.

ROUTLEY, Richard and Macrae, Valerie. On The Identity Of Sensations And Physiological Occurrences. *Amer Phil Quart* 3,87-110 Ap 66.

Many objections to the hypothesis that sensations are physiological occurrences are based upon a theory of identity which would exclude a contingent identity holding between sensations as reported in ordinary language and sensations as described in scientific discourse. The main task of this paper is to sketch a theory of identity adequate to cope with the truth of such identities and their peculiar features. Two conditions must be satisfied by true theoretical identities. First, items identified should share all *extensional* properties which are such that they are significant of both. These items do not have to be of the same logical type or category. Second, it is required that a theory about one of the items of a theoretical identity should explain features of the other item. Because the identity hypothesis, thus interpreted, is empirically equivalent to and compatible with various apparently rival hypotheses, such as the double aspect and causal theories, a synthesis of these hypotheses is affected.

ROVER, Thomas D. *The Poetics Of Maritain: A Thomistic Critique*. Washington DC Thomist Pr 1965.

This study of the poetics of J Maritain is divided into three sections. The first is a non-critical study of Maritain's theory of "Art and Imitation" and "Art and Beauty." The second part discusses the poetics of St Thomas and Maritain. The third part criticizes the theory of Maritain's poetics, with a denial that it is a truly Thomistic poetics. One major conclusion of the author is that "the work of fine art is a manifest imitation of the probable or possible in human action principling cognitive delight in the contemplator."

ROWBOTHAM, Arnold H. The Jesuit Figurists And Eighteenth-Century Religious Thought. *J Hist Ideas* 17,471-485 O 56.

ROWE, Constance. *Voltaire And The State*. NY Columbia Univ Pr 1955.

This work is an examination of Voltaire's "philosophy of patriotism," his visions of *la patrie*, his statement of the specific rights and liberties which define the social contract, and his views on the ethics of international relations. His concept of the state is developed both as an evolved body of rational doctrine, and as an expression of the ties of feeling which bound the *philosophe* to his home land. His political insight and theory, while shaped in the image of a particular national complex, are shown to derive both a validity and a singular vigor from their cosmopolitan implications.

ROWE, William L. *Religious Symbols And God: A Philosophical Study Of Tillich's Theology*. Chicago Univ Of Chicago Pr 1968.

ROWE, William L. Augustine On Foreknowledge And Free Will. *Rev Metaph* 18,356-363 D 64.

The author explains and criticizes Augustine's argument against the view that God's foreknowledge is incompatible with human freedom, and suggests another way of rejecting that position. In *(On Free Will)* Augustine maintained that, although necessary, one's willing to sin is free because it is in his power to do. Analyzing Augustine's idea of power in this context, the author rejects this line of reasoning. Instead, citing Boethius and Aquinas, he distinguishes two senses of the proposition, "Whatever God foreknows must necessarily happen," and argues on the basis of this distinction that divine prescience is not incompatible with free will.

RUCKER, Darnell. Man And Institution: The Moral Problem. *Western Humanities Review* 225-230 Sum 65.

An argument that ethics is descriptive and politics normative, in that genuine alteration of behavior is the result of changes in the value structures of institutions and not of the teaching or exhorting individuals as such. The moral disorder of our time is said to reflect the transitional stage many of our basic institutions are in and the lack of any clear understanding of the value changes consequent upon those transitions. What is urged is a recognition of the necessity to make explicit both the values actually operative in our institutions and the values latent in them.

RUCKER, Darnell. Our Cartesian Heritage. *Western Humanities Review* 22,285-296 nd.

The split in the world effected because of the timeliness of Descartes' dualism is reflected in the notions attributed to French existentialism and the extreme forms of psychological behaviorism. The separation of soul and world that proved so useful to science in the seventeenth century has led to the view of the soul adrift in an unknowable world, on one hand, and that of a mechanized, soul-less universe, on the other. The restoration of the wholeness of man and world in line with the Darwinian revolution has been attempted by Peirce, Royce, and Dewey, but as yet without wide influence.

RUCKER, Darnell. Plato And The Poets. *J Aes Art Crit* 25,167-170 Wint 66.

The role of the poet in the *Republic* is no more restricted than are the roles of the legislator and the philosopher. All three of these functions must be tailored to the requirements of the ideal city and thus are radically different from what they are in existing cities. Life in the Republic will be aesthetic, moral, and veritable; hence, art will not be something set apart in museums and theaters but the form and grace of living well.

RUCKER, Darnell. The Liberal Arts And The Manual Arts In Education. *School And Society* 350-352 16 N 63.

The concern of George Herbert Mead early in this century with integration of vocational training into the liberal arts curriculum of the schools was a concern to make the entire educational process more vital and to prevent the erection of separate vocational programs such that they perpetuate economic class distinctions. This article indicates some of Mead's arguments for a practical liberal education and points to the relevance of those arguments for schools today.

RUCKER, Darnell. The Moral Grounds Of Civil Disobedience. *Ethics* 76,142-145 Ja 66.

Civil law holds only for rational beings; hence laws are always disjunctive: do this or else suffer punishment. Civil disobedience is the acceptance of the punishment, rather than obey an insupportable law. Such disobedience is not a defiance of law as such, but the choice of the law's own "or else" and stands as a moral alternative to crime, rebellion, or escape in the face of a law judged immoral and that one is powerless to change.

RUDICH, Norman. "The Dialectics Of Poesis: Literature As A Mode Of Cognition" in *Boston Studies In The Philosophy Of Science*, 343-400. NY Humanities Pr 1965.

The purpose is to distinguish scientific and poetic languages in terms of two distinct objects of knowledge, respectively, nature and praxis. Human praxis implies agents acting with a purpose in terms of a specific natural and social world which they must find means to appropriate. Poetic language accounts for praxis through simultaneous imitation, interpretation, evaluation, and generalization of its object. An analysis of the first quatrain of Gray's "Elegy" illustrates the imminent dialectic of these four moments in poetic language. Poetry is the theoretical expression of praxis.

RUDNER, Richard (ed) and Scheffler, Israel (ed). *Logic And Art: Essays In Honor Of Nelson Goodman*. Indianapolis Bobbs-Merrill 1972.

RUDNER, Richard S. *Philosophy Of Social Science*. Englewood Cliffs NJ Prentice-Hall 1966.

The first part of this monograph is a broad outline giving the essentials of a purely formal system. But no attempt is made to apply this system to the data of the social sciences. In fact, the author concludes that formal techniques are not applicable to such data—at least not at this time. The remainder of the work is a critique of *Verstehen*, subjectivism, empathy, teleology, and other non-scientific methods. Only functionalism, a form a teleology that omits metaphysical implications and is compatible with scientific procedures, may have some intrinsic value for the social sciences. But the author then states that the results of functional explanations have been "minuscule." After these negative conclusions the reader is left wondering whether the social sciences are really worth studying.

Critics of American legal realism have wrongly insisted that it was indifferent to the "ought" of the law. Realists consistently supported the causes of social justice. Nonetheless there is a paradox in legal realism. It insisted on defending the judge's freedom to reach the fair or just decision but failed to try to analyze the norms of justice and fairness. This paradox is explained by the fact that the legal realists, wanting to reform the law, saw the analysis of norms as something conservatives did in trying to prove that fairness was embodied in the existing context of the law.

The subject of the meaning of meaning has long occupied Russell and presents a question upon which he has said he feels he has made his most lasting contributions. We have here his latest conclusions on science, language, perception, scientific concepts, probability and the postulates of scientific inference.
- RUSSELL, Bertrand.** *My Philosophical Development.* NY Simon & Schuster 1959.
The author contends that the one revolution in his thought occurred when in 1899-1900 he adopted the philosophy of logical atomism and the technique of Peano in mathematical logic, subsequent changes being only of the nature of an evolution. He describes "the doctrine of external relations" as having dominated all his subsequent philosophy. He thinks that modern linguistic philosophy is commonly vitiated by ignoring the fact that words themselves are classes of events so that there arise within the field of language itself the problems about correspondence to reality, universals and particulars, etc., which this philosophy seeks to evade. He holds that our ordinary thinking about matters of fact cannot be regarded as based on induction since the latter principle alone would lead more often to false conclusions than to true. There is a chapter on "The Impact of Wittgenstein," but his later work as well as Ryle's Concept of Mind and contemporary Oxford philosophers are severely attacked in four reviews reprinted here.
- RUSSELL, Bertrand.** *New Hopes For A Changing World.* NY Simon & Schuster 1951.
- RUSSELL, Bertrand.** *The Impact Of Science On Society.* NY Columbia Univ Pr 1951.
In "Science and Tradition," he shows how science has served to free mankind from many of the unfounded constraining myths which found unthinking support in tradition. In "Effects of Scientific Technique," he shows how technique or the manipulation of power has had marked political, social and economic effects over recent centuries. He warns that "...unless the power of officials can be kept within bounds, socialism will mean little more than the substitution of one set of masters for another: all the former powers of the capitalist will be inherited by the official." As

to "Science and Values," we have the optimistic conclusion that science can increase benefits and decrease our ills, if the true scientific spirit is recognized and followed—before it is too late.

RUSSELL, Bertrand. *Unpopular Essays.* NY Simon & Schuster 1951.

Here are significant samples of his trenchant analysis of problems in philosophy, politics, history and sociology. The first selection on "Philosophy and Politics" contains a summary of his liberal creed: "The Liberal creed, in practice, is one of live-and-let-live, of toleration and freedom so far as public order permits, of moderation and absence of fanaticism in political programs. Even democracy, when it becomes fanatical, as it did among Rousseau's disciples in the French Revolution, ceases to be liberal; indeed, a fanatical belief in democracy makes democratic institutions impossible, as appeared in England under Cromwell and in France under Robespierre."

RUSSELL, Lillian M. *The Path To Reconstruction: A Brief Introduction To Albert Schweitzer's Philosophy Of Civilization.* NY Holt 1942.

This book is a summary of the social thought of one of the most singular individuals of our time. Schweitzer abandoned an eminent career in music, theology and philosophy in Germany, to become a medical missionary in French Equatorial Africa. His motives arose from his ethical ideal: "to show to all forms of life and of the will-to-live the same reverence that we feel for our own life."

RUSSELL, Olive Ruth. *Freedom To Die: Moral And Legal Aspects Of Euthanasia.* NY Human Sci Pr 1975.

Russell seems to smudge some important philosophical distinctions, conflating euthanasia with suicide, infanticide, and senicide—which may be etymologically sound but philosophically egregious. While Russell directs some cogent criticisms against selected "slippery slope" arguments, she confirms many of the expressed fears behind such an objection by recommending mercy killings (provided they are not involuntary) for victims of Tay-Sachs disease, Down's Syndrome, etc. Her book outlines a case for the right to die with dignity.

RUTENBER, Culbert Gerow. *The Doctrine Of The Imitation Of God In Plato.* NY King's Crown Pr 1946.

Although Plato makes comparatively few references to the imitation of God, it is a major theme in his work, beginning in the middle period and gaining strength until the latest dialogues. Changes in Plato's cosmology, psychology, and politics are connected with the growth of the doctrine of imitation of God. Since the good man has pleasure, God too must have the calm pleasure of the mind.

RYAN, Bernard. *The Evolution Of Man, Some Theological, Philosophical And Scientific Considerations.* Westminster MD Newman Pr 1965.

This is a survey of the theory of evolution written from the point of view of Catholic theology and philosophy. The author has a favorable attitude toward Darwinism, insists that it is the best available explanation of the development of things in nature. Certain difficulties in Catholic theological interpretations (e.g., must all present men have evolved through one prototypal man; what is the relation of the divine concursus to phylogenesis?) are very rapidly handled. Brother Ryan's own philosophical interpretation of transmutation brings God into the picture, on the side of transcendent finality.

RYAN, Francis A and Redden, John D. *Freedom Through Education.* Milwaukee Bruce 1944.

RYAN, John Julian. *Beyond Humanism, Towards A Philosophy Of Catholic Education.* NY Sheed & Ward 1950.

The author believes that just as the humanist loses none of the values of the purely naturalistic thinker, but integrates and repropoitions these while gaining others as well, so the Christian loses none of the values of either the naturalistic thinker or the humanist, but while integrating and repropoitioning all these, gains others which only the virtue of Hope could make him believe possible. He here encourages men to be mindful of the heritage they have come into as Christians, and attempts to show what problems must be dealt with and what principles must be followed in assimilating and integrating all sound methods of education.

RYAN, John K (ed) and Bonansea, Bernardine M (ed). *John Duns Scotus, 1265-1965.* Washington DC 1965.

Fifteen essays, none of which are by members of Duns Scotus' own order. These essays are on a wide variety of topics, including the life and works of Scotus, various broad or particular aspects of his philosophy, his influence on such as Suarez and William of Vaurouillon, and reports of current editorial efforts centered on the Scotistic remains.

RYAN, John K (ed) and Bonansea, Bernardino M (ed). *John Duns Scotus, 1265-1965.* Washington DC Cath Univ Am Pr 1965.

This is the third and perhaps most important volume of "Studies in Philosophy and the History of Philosophy," a series that is gaining wide recognition for the seriousness of its purposes and the genuine scholarship of its contributions. A chief concern of the editors of this volume has been to present Scotus' thought and personality in their proper light and perspective. The work, which has been rated among the most authoritative sources of information in the field of Scotistic studies, condenses the results of long and painstaking research conducted by prominent Scotists throughout the world with varying academic backgrounds and different religious affiliations.

RYAN, John K. *Modern War And Basic Ethics.* Milwaukee Bruce 1940.

Father Ryan offers first a brief exposition of the Thomistic theory of peace and war, then an outline of the development of this doctrine by later Scholastics, and finally an acute analysis of modern warfare considered in the concrete with all its horrible consequences. His discussion of the effects of total war on civilian populations is a noteworthy section.

RYAN, John Kenneth (ed). *Philosophical Studies In Honor Of The Very Reverend Ignatius Smith, O.P.* Westminster MD Newman Pr 1952.

This book is a collection of essays by several Roman Catholic philosophers published as a tribute to the dean of the School of Philosophy at The Catholic University of America.

- SACHS, Hanns.** *The Creative Unconscious: Studies In The Psychoanalysis Of Art.* Cambridge MA Sci-Art 1942.
Dr Sachs belongs to the group of those faithful ones who never swerved from the path of psychoanalytic orthodoxy and who do not scruple to set down even the later metaphysical ventures of Freud as "discoveries." The familiar psychological principles are made to support likewise familiar corollaries and applications in the field of esthetics. In the third, concluding part of his book, entitled "Beauty, Life, and Death," he enriches the tenets of Freudian esthetics with a fresh hypothesis by fusing the psycho-analytic sublimation doctrine with Friedrich Schiller's idealistic play-theory.
- SACHS, Mendel.** *The Field Concept In Contemporary Science.* Springfield IL Thomas 1973.
This monograph presents a non-mathematical discussion of the role of the continuous field concept in the three major areas of contemporary physics. Electromagnetism is discussed in terms of a continuous field of potential force. The theory of relativity is discussed in terms of a continuous field of geometry—represented as continuously distributed relations between the points of space-time as determined by the matter distribution of a physically closed system. Discussion is given to the logically dichotomous and compatible aspects of these three field theories, and indications of possible paths toward a unification into a general field theory of matter.

- SACKSTEDER, William.** "Theories" And Usage. *J Phil* 59,309–319 Je 62.
The present paper is concerned to ruminate on some implications of the common usage of the term 'theory' to stand for communicative accounts that purport to be true. More limited usages of 'theory', it is suggested, may turn our attention from various essential characters that are entailed in order for any account to be true. It is argued that at least one necessary character of any theory lies in its structure and its correlation with some other, presumably in the reality of whatever is being discoursed about. It is shown how accounts of comparatively mundane sorts (monosyllabic utterances, nonverbal devices) are included in the class of theories.
- SACKSTEDER, William.** A Senator Looks At Courage. *Ethics* 68,137–139 Ja 58.
- SACKSTEDER, William.** Communication And Control. *Centennial Review* 6,19–35 Wint 62.
The idea of "communication" provides both a magic model and philosophic principles for much modern thought. But it is often replaced by alien and degrading elements derived from the related notion, "control." The personal relations in control are unilateral, whereas reciprocity is required before communication can serve as an ideal. Systematic confusions between these terms in our theoretical schemes lead to practical dangers for pursuit of knowledge, arts and private or social norms. All of these are means toward the agreements which make communication a value. When replaced by the elements of control, their respective human values are endangered.
- SACKSTEDER, William.** Contemporaneity. *Thought* 40,529–548 D 65.
- SACKSTEDER, William.** Diversity In The Social Sciences. *Phil Sci* 30,375–395 O 63.
Controversy in the behavioral sciences seems to presume that there is a single model of scientific propriety. Critics cite diverse methods and results, thinking that model is unattained or unattainable. Proponents claim approximation to it, for both presuppose one scientific ideal. It is argued here that such a model is illusory. Rather, there are alternative valuable but inconsistent theoretical schemes for social science. Neither fact nor logic nor history discriminates among them. Each is fruitful and sound according to its own structural requirements. Four famous and admired economists illustrate these ambiguities. Different ways of envisaging and attaining a sound behavioral science account for this diversity. A single model is not to be attained. The diversity itself is beneficial.
- SACKSTEDER, William.** Education And Its Evasions. *Educ Theor* 10,187–204 JI 60.
- SACKSTEDER, William.** Human Nature, Science, And Philosophy. *Univ Of Colorado Studies* 83–98 F 58.
When we question whose business it is to speak with authority about human nature, scientists and philosophers and men of common sense seem plausible candidates. This paper is an effort to sort out their respective roles in this endeavor. Each has his place, but each advances undue claims therefrom. As their roles are organized here, the sciences provide sound special knowledge of varying aspects of human nature. But they are limited by selective presuppositions. In dialectical functions, philosophy plays these against each other, but with non-substantive results. In conditioning functions, it provides universal limits of a peculiarly vacuous nature. In practical functions, it articulates the applications and prevailing assumptions of common sense viewpoints.
- SACKSTEDER, William.** Inference And Philosophic Typologies. *Monist* 48,567–601 O 64.
A schematism of types of philosophy is developed according to their choice of a standard or typical kind of inference. The paper argues that this selection of one kind of transformation as basic determines a "schema" whereby logical operations are correlated with possible sciences and hence with the world as it is known. Thus a given philosophy adopts its characteristic use of controversial terms, and sets itself a task which is misunderstood when other philosophic principles are employed. This exposition illustrates a thesis that the kind of argumentation thus favored is a key to the understanding of different philosophic modes, whereas most dichotomous or triadic characterizations of different philosophies are invidious and rhetorical.
- SACKSTEDER, William.** John Dewey And The Owl Of Minerva. *Univ Of Colorado Studies* 67–82 Ag 61.
Philosophic accomplishments relate peculiarly to time. A living man writes it to resolve his problems and those of his era. But he gains such leverage by envisaging those inescapable conditions which limit all temporal accomplishment. Dewey especially urged relevance to changing problematic situations by pointing out our necessary engagement with experiential limitations. These paradoxes are ruminated here under the guise of a commemorative oration which inquires about past accomplishments and present ironies in Dewey's philosophy, and about future oblivion or reassessment for it.
- SACKSTEDER, William.** Kant's Analysis Of International Relations. *J Phil* 51,848–854 D 54.
Exposition of Kant's analysis of international relations here takes the form of granting its principles and general philosophic context. In place of added debate on these, the effort is to set forth the consequences of its headings in a manner attentive to the systematic limitations and locations controlling them. For such definition gives meanings and avoids over-extensions in applying practical principles. In particular, for purposes of international law and communal goals, proper ways of connecting actualities and ideals are provided by sorting out in this manner. Thus the practical relation of guidance and correction by principles is preserved in their application to real cases.
- SACKSTEDER, William.** Kinds Of Theoretical Communication. *Int Phil Quart* 4,108–121 F 64.
In the traditional definitions of kinds of theories, there are often three. These are distinguished in turn from logic, which is not strict knowledge, and from practical or artistic concerns. Also, some one among the three absorbs functions which condition and limit all the others. Or else all are reduced to some unity in which each item thus discriminated reappears as ingredient. Here this pattern is reworked in modern terms, providing three theoretical sciences called mathematics, special sciences, and one conditioning science. All of these have content so they are not logic. They are directed toward knowledge, being neither practical nor artistic in goal. The ambiguously named one of them concerns the conditions of communication. Hence all of them may be brought under "communication" as a general heading.
- SACKSTEDER, William.** The Making Of Myths. *Phil Forum (Pacific)* 4,3–59 S 65.
Myths duplicate, and sometimes pervert the functions of other major human creations such as science, moral and social norms, works of art, and religions. But these contents are presented in a format which is indirect and disguised according to dramatic and narrative images. It is also adapted to some obscure and gross intention which seems to distort and to belie human goals. Or else to summarize and regulate them at some total limit. But no one maker of myth has these intentions or creates these ambivalences. Rather, all of us join in mythmaking, sometimes by consent, sometimes by duplicity of vision. For myths are not falsehoods, but humane functions taken to be fulfilled according to this or that ruling image.
- SACKSTEDER, William.** Theories And Their Context. *Phil Phenomenol Res* 24,48–60 S 63.
All theoretical activities are pursued within some context. But no facts from any such context can be indicated in independence of a theory. Hence the devices of theoretical communication are muddled by variation in experiential contexts and by alternative modes of expression. Yet we might turn our attention to those minimal and limiting conditions which are presupposed by any theory whatsoever. These are found in the context without which experience could not take place at all and in the requirements set by any possibility for exchange of theories for purposes of knowledge. But such conditions are themselves communicated by a theoretical

- artifact. They are not neutral. Hence it is only by a kind of fiction that we turn our attention to the context of theories.
- SACKSTEDER, William.** Theories: A Definition. *Graduate Comment* 9,114-120 1965-66.
